# About this Guide

This document is a reference guide that provides information on Thredd's Global Transaction Reporting, including the Clearing Report and the Non-Clearing Report. The guide describes the report elements, sub-elements and attributes.

## Target Audience

The target audience is technical team(s) that handle the processing of the transaction report files. They should have reasonable knowledge of XML/XSD and of the Cards industry.

## What's Changed?

If you want to find out what's changed since the previous release, see the [Document History](#) section.

## How to Use this Guide

If you are new to Thredd and want to understand basic information on the report files, see the [Introduction](#) and [Transactional Data Files](#) topics.

For details about the record types and fields in the report files, see [Primary Elements](#).

To view an example of a Clearing (CLR) transaction report file, see [Clearing \(CLR\) Transaction Report Example](#).

To view an example of a Non-Clearing (NCLR) Transaction report file, see [Non-Clearing \(NCLR\) Transaction Report Example](#).

## Other Documentation

Refer to the table below for a list of other relevant documents that should be used together with this guide.

Document	Description
<a href="#">Global Balance Reporting Guide</a>	Describes the structure and content of the Balance XML report.
<a href="#">External Host Interface (EHI) Guide</a>	Provides details of the Thredd External Host Interface (EHI).
<a href="#">Smart Client Guide</a>	Describes how to use the Thredd Smart Client to manage your account.
<a href="#">Web Services Guide</a>	Describes how to use the Thredd web services API.
<a href="#">Thredd Portal Guide</a>	Thredd Portal is Thredd's new user interface for managing your cards and transactions on the Thredd Platform

**Tip:** For the latest technical documentation, see the [Documentation Portal](#).

# SECTION 1: GETTING STARTED

You should read this section if you are new to Thredd reports in Global Transaction Reporting. This will enable you to understand the types of reports that are available and how they are provided.

Topics covered in this section:

- [Introduction](#)
- [Transactional Data Files](#)
- [Reports Data Schema](#)

**Tip:** To find out what has changed, see the [Document History](#).

## 1.1 Introduction

Thredd's Global Transaction Reporting provides transaction reports that you can receive at the local time you require, regardless of your organisation's timezone. This ensures that the sending of the reports are not fixed to a specific UTC time as set by Thredd. The reports contain details of transactions processed on the system during the past 24 hours, including authorisations and financial transactions for the Visa and Mastercard card schemes, as well as MNE (Mastercard Networks Exchange) and DGN (Discover Global Network).

Transaction reports use Thredd's XML reporting system for Global Transaction Reporting, which employs the Secure File Transfer Protocol (sFTP). In the reporting system, Thredd processes incoming requests from the Card Schemes (payment networks) using its real-time authorisation engine.

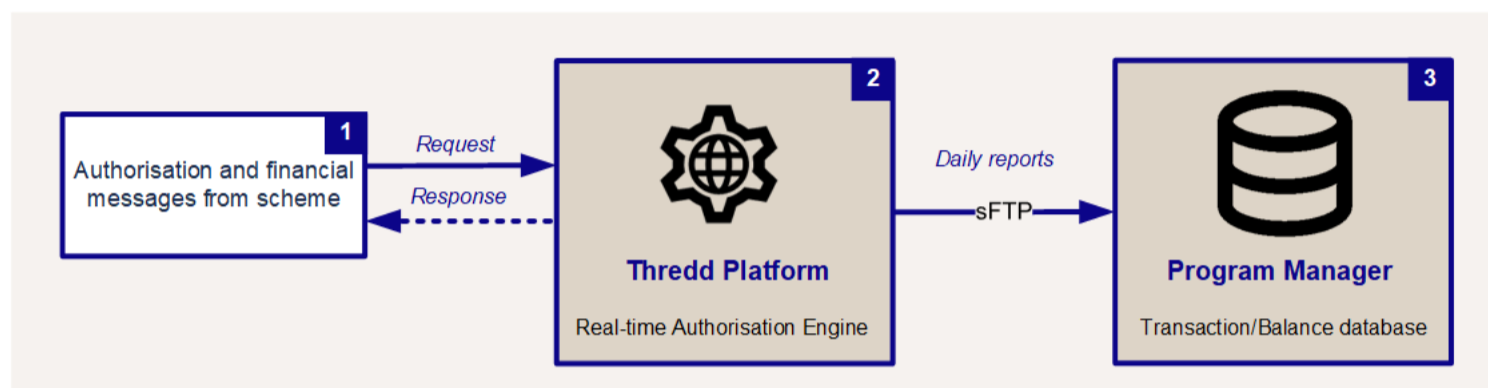

Figure 1: Global Transaction Reporting

### 1.1.1 Non-Clearing and Clearing Reports

Thredd's Global Transaction Reporting provides Non-clearing and Clearing reports for cardholder transactions.

The Non-Clearing Report includes data relating to authorisations, loads/unloads, balance adjustments (via webservice). The report also consists of cardholder fees generated by Thredd (you have set up in your fee groups) and other Thredd data.

The Clearing Report provides details on financials, interchange fees and chargebacks.

You can use these reports to reconcile against Mastercard or Visa settlement advices. You can also use the reports to reconcile with data received from EHI. The format and content of the transaction clearing and non-clearing data reports are described in this guide.

### 1.1.2 Other Types of Reports

In addition to Non-Clearing and Clearing reports, Thredd generates the:

- Balance Report
- Fee Collection Report
- Quarterly Scheme Report

#### Balance Report

The Balance Report is relevant where Thredd maintains details of card balances, such as in EHI modes 2, 3 and 4 or where EHI is not being used. This report provides details of the balance on each card at the time of your chosen cut-off and generation. You can use this report to confirm how much money is on the card according to Thredd systems (where Thredd maintain the balance). You can compare this to information you hold in your local card database. Like the transaction reports, you can receive reports at the local time you require regardless of your organisation's time-zone.

#### Fee Collection Report

The Fee Collection Report is a daily summary of Scheme (Mastercard/Visa/MNE) fees by ICA and currency for reconciling against the Mastercard/Visa/MNE Settlement summary reports. The report is provided to issuers and self-issuers. It includes transaction categories such as Interregional non-financial ATM transaction fees, and fees for ATM PIN management and ATM Balance Inquiry fees. For more information, contact your Thredd Implementation Manager or Account Manager.

## Quarterly Scheme Report

The Quarterly Scheme Report contains quarterly data needed to fill in/submit the quarterly scheme reports:

- **Mastercard** – Quarterly Management Reports
- **VISA** – Global Operation Certificates
- **Discover** – Quarterly Scheme Report

The report include details such as the number of live cards, cards issued, and information on card activity and status. This report is provided to issuers and self-issuers. For more information, contact your Thredd Implementation Manager or Account Manager.

## 1.2 Transactional Data Files

For Global Transaction Reporting, Thredd can supply you with daily transaction-related data reports in the XML file format at the time settings you require. The files are delivered to you via sFTP.

**Note:** Bear in mind that if you need to keep transaction records over time, you must follow the right business processes for maintaining the records.

### 1.2.1 XML File Contents

File contents include either the Clearing Report or the Non-Clearing Report.

#### Clearing Report

The Clearing Report contains all the available presentments on the Thredd platform, which have been received and processed at the InitiationTime. This is data that is used for clearing. For an example of a Clearing Report, see [Clearing Transaction Report Example](#).

#### Non-Clearing Report

The Non-Clearing Report contains authorisation, load, unload and fee data on the Thredd platform. This data is received and processed at the InitiationTime. For an example of a Non-Clearing Report, see [Non-Clearing Transaction Report Example](#).

### 1.2.2 File Sending Schedule

Thredd can send files of generated reports at a time that meets your business requirements. For each report type, you can choose the InitiationTime, ToTime and FromTime settings. The following table summarises the time settings:

Time	Description
InitiationTime	The time of day you select for Thredd to start the generation of an individual report.
ToTime	The latest time threshold/end interval during the day for the timestamp transactions to be included in the report. InitiationTime is always $\geq$ to the ToTime.
FromTime	The earliest time threshold/start interval during the day for timestamp transactions to be included in the report. By default, FromTime = ToTime over a 24h period.
GenerationTime	The time needed to produce a report, spanning between InitiationTime and the time when the XML file for the report has been created.
TransportationTime	Disk and network time needed to copy a readily available XML file/report to the client sFTP folder.
DeliveryTime	The time when the XML file/report is available in the client's sFTP folder for pick-up.

GenerationTimes and TransportationTimes determine the DeliveryTime of the report. The DeliveryTime depends on the number or volume of transactions in the file that passed from the report InitiationTime.

By default, Thredd use the following logic for the reports:

- **Non-Clearing Report** – By default, the InitiationTime is after midnight in your selected timezone. The FromTime is 00:00 of the previous day (D-1) in relation to the InitiationTime. The ToTime is 23:59 of the previous day (D-1) in relation to the report InitiationTime.
- **Clearing Report**– The Initiation, From and ToTimes are selectable (FromTime = ToTime over a 24h period).

## Card Scheme and Gateway Provider Considerations

If you want your Clearing Reports to include Visa and Mastercard transactions, you need to consider the clearing cycles for these card schemes. The clearing cycles can influence the XML file sending schedule from Thredd for the Clearing Reports. For MNE<sup>1</sup> gateway transactions, the clearing cycles **do not** apply. This is because MNE sends transactions that are SMS messages, where authorisation and clearing data are in the same message. When Thredd sends to you MNE transactions data, these are included within **Non-Clearing Reports**.

The clearing cycles are summarised as follows:

- **Mastercard** – There are 6 clearing cycles per day, seven days per week. After each clearing cycle, Mastercard sends Thredd clearing files, which contain the settlement data. Data from cycles 5-6 from the night before and 1-4 from current day form a complete settlement day picture for most regions. These contain all the information you need to reconcile your settlements with Mastercard.
- **Visa**– Visa provide 2 clearing files (Domestic and International) each day. For International visa cycles, different timings exist for some regions (For example, Australia and Hong Kong). There is a maximum file size where, for the largest clients, it is possible that more than one Domestic and/or International file will be received on the same day. Visa domestic cycles start at 9 am, while international cycles start at mid-day. The clearing cycles occur for 7 days a week.
- **Discover**– Discover implement one release cycle per day.

### 1.2.3 File Naming Convention

The transaction report files that you receive from Thredd use the following naming convention:

Type of Report	Environment	Naming Convention
Non-Clearing Report	PX	THRD-PPPP-NCLR-YYYYMMDDHHMM-YYYYMMDDHHMM.PX.xml
Clearing Report	PX	THRD-PPPP-CLR-YYYYMMDDHHMM-YYYYMMDDHHMM.PX.xml

Where:

- **THRD** – Abbreviation for Thredd.
- **PPPP** – Programme manager code or name.
- **NCLR** – Report code. NCLR is for a Non-Clearing file and CLR is for a clearing file.
- **YYYYMMDDHHMM** – FromTime, first occurrence after report code. This includes YYYY for year (4 digits), MM for month (2 digits) and DD for day (2 digits).
- **YYYYMMDDHHMM** – ToTime, second occurrence after report code). This includes YYYY for year (4 digits), MM for month (2 digits) and DD for day (2 digits).
- **PX** - Thredd production environment used to generate the report, value of X indicating the exact environment.

### Examples

The following shows examples of files for a Non-Clearing Report and Clearing Report.

Example	Type of Report	Description
<a href="#">THRD-ABC-NCLR-202401250000-202401260000.P1.xml</a>	Non-Clearing Report	This file includes a snapshot of all non-clearing transactions recorded for the ABC program manager, available on the Thredd platform. The file includes the respective statuses at the report <a href="#">InitiationTime</a> with a timestamp between the 25th of January 2024, 00:00 and the 26th of January 2024, 00:00 on Thredd's Production 1 environment.
<a href="#">THRD-ABC-CLR-202402151400-202402161400.P2.xml</a>	Clearing Report	This file includes a snapshot of all clearing transactions recorded for the ABC program manager, available on the Thredd platform. This file includes the respective statuses at the report <a href="#">InitiationTime</a> with a timestamp between the 15th of February 2024, 14:00 and the 16th of February 2024, 14:00 on Thredd's Production 2 environment.

<sup>1</sup>MNE (Mastercard Networks Exchange) This is a US PIN debit network provider for opening access to US debit networks.

**Note:** For details on which production environment applies to your programme, check with your Thredd implementation manager or account manager.

## Regenerated Reports

Thredd includes `_REG` in the filename of a Non-Clearing Report or Clearing Report for regeneration. The filenames can include the following naming conventions:

- `THRD-PPPP-NCLR-YYYYMMDDHHMM-YYYYMMDDHHMM_REG.PX.xml`
- `THRD-PPPP-CLR-YYYYMMDDHHMM-YYYYMMDDHHMM_REG.PX.xml`

Example	Type of Report	Description
<code>THRD-ABC-NCLR-202501250000-202501260000_REG.P1.xml</code>	Non-Clearing Report	The regenerated report includes the same timestamp as the original report recorded for the ABC program manager. In this case, the timestamp of the original report is between the 25th of January 2025, 00:00 and the 26th of January 2025, 00:00. The report is regenerated in the P1 production environment.
<code>THRD-ABC-CLR-202502151400-202502161400_REG.P2.xml</code>	Clearing Report	The regenerated report includes the same timestamp as the original report recorded for the ABC program manager. In this case, the timestamp of the original report is between the 15th of February 2025, 14:00 and the 16th of February 2025, 14:00. The report is regenerated in the P2 production environment.

**Note:** Thredd increments a number for multiple regenerations. For example, the filename is as follows for a second regeneration of a Non-Clearing Report: `THRD-MCB-NCLR-202401250000-202401260000_REG.P1(1).xml`.

## 1.2.4 Encryption and Encoding

XML files are encrypted using PGP, which requires the sharing of keys. For details, contact your implementation manager.

All of the XML data files are well-formed XML (UTF-8 encoded).

**Note:** As XML is case-sensitive, you should ensure that you follow the correct casing for all XML elements and attribute names when processing the message.

## 1.3 Transaction Matching

All transactions reported to Thredd via the card schemes (Visa, Mastercard, MNE, and Discover) are included in the Clearing Report and the Non-Clearing Report, as well as the EHI data feed. You can use the information in these reports to match and reconcile against data received via EHI, check for any duplicate records, and match authorisation records. When matching authorisation records, you can match advices and reversals to financial records (for example, presentments and chargebacks.)

### 1.3.1 Matching Authorisations to Financial Records

You can use the following fields to match records in each of the reports:

Field Type	Non-Clearing report: CardAuthorisation Record	Clearing report: CardFinancial Record
Unique identifier of an authorisation transaction	AuthId	AuthId
Approval code generated by the issuer and printed on the receipt	ApprCode	ApprCode
Unique identifier of a financial record	-	FinId
Unique identifier of a presentment record	-	PresentmentId
Information for uniquely identifying a transaction	Trace	-

### 1.3.2 Matching Transaction Records to EHI Records

You can use the following fields to match transaction records in the reports to EHI records:

Field Type	Transaction Report Record	EHI Record
Unique identifier of the card linked to the transaction (available in both the Clearing Report and the Non-Clearing Report)	PAN	Token
Unique identifier of an authorisation transaction (available in both the Clearing and Non-Clearing Report)	AuthId	TXn_ID
Unique identifier of a financial record (available in the Clearing Report)	FinId	TXn_ID

For details of EHI fields, refer to the [External Host Interface \(EHI\) Guide](#).

## 1.4 Reports Data Schema

The data schemas for the Non-Clearing Report and Clearing Report in Global Transaction Reporting describe their structure and possible data values within those reports.

You can validate each transaction XML file you receive from Thredd against the provided Schema (XSD file). This ensures that the transaction file is in the correct format.

The data schemas for the Non-Clearing Report and Clearing Report are subject to change as the standard evolves. When Thredd updates either XSD report file, Thredd implements a new version and notifies you.

### 1.4.1 Schema Versions

Schema files are versioned according to changes in the schemas. The schema filename indicates the schema version number. There is a comments section in each schema file that provides details of the version changes. Thredd sends schema files when a new version of the XML is published.

For an example of the current data schema, see the [Non-Clearing Report XML Data Schema](#) and [Clearing Report XML Data Schema](#).

### 1.4.2 Schema Elements

An XML file conforming to the schema consists of the following elements:

- [Primary elements](#)
- [Sub-elements and attributes](#)

## SECTION 2: PRIMARY ELEMENTS

This section describes the Primary Elements within the transaction reports for Global Transaction Reporting.

Topics covered in this section:

- Primary Elements

### Non-Clearing Report

- CardAuthorisation
- CardOnline Financial
- CardFee
- CardLoadUnload
- ApprovedAgencyBanking
- DeclinedAgencyBanking
- AgencyBankingFee
- CardBalAdjust
- CardEvent

### Clearing Report

- CardFinancial
- CardFee (interchange)
- MasterCardFee
- CardChrgBackRepRes

## 2.1 Primary Elements

Primary Elements are listed within a <Transactions> parent element, which defines the top-level entities of the message. See the table below for details.

**Note:** For Discover Global Network reporting, Thredd use the new Global Transaction reporting format, which separates primary element into two separate reports:

- **Non-clearing report** – containing authorisation and other real-time messages.
- **Clearing report** – containing financial messages based on the card scheme's release cycles (Discover implement one release cycle per day).

Element Name	Description	Data Type	Occurs
<b>Non-Clearing Report Primary Elements</b>			
CardAuthorisation	Describes an Authorisation or Reversal.	<CardAuthorisation>	0 - n
CardOnlineFinancial	Describes single message transactions for the requirements of card payment networks in the US. <b>Note:</b> Not applicable to the Discover Global Network.	<CardOnlineFinancial>	0 - n
CardFee (Interchange)	Describes a fee (and commission). <b>Note:</b> Not applicable to the Discover Global Network.	<CardFee>	0 - n
CardLoadUnload	Describes loading and unloading of a card. <b>Note:</b> Not applicable to the Discover Global Network.	<CardLoadUnload>	0 - n
ApprovedAgencyBanking	Describes an approved Agency Banking transaction (relevant only if you are using the Agency Banking service) <b>Note:</b> Not applicable to the Discover Global Network.	<ApprovedAgencyBanking>	0 - n
DeclinedAgencyBanking	Describes declined Agency Banking transaction (relevant only if you are using the Agency Banking service) <b>Note:</b> Not applicable to the Discover Global Network.	<DeclinedAgencyBanking>	0 - n
AgencyBankingFee	Describes any bank charges applied to Agency Banking transaction (relevant only if you are using the Agency Banking service). <b>Note:</b> Not applicable to the	<AgencyBankingFee>	0 - n

Element Name	Description	Data Type	Occurs
	Discover Global Network.		
CardBalAdjust	Describes a card account Balance Adjustment or Reversal. <b>Note:</b> Not applicable to the Discover Global Network.	<CardBalAdjust>	0 - n
CardEvent	Describes a card status change event. <b>Note:</b> Not applicable to the Discover Global Network.	<CardEvent>	0 - n
<b>Clearing Report Primary Elements</b>			
CardFinancial	Describes a Financial Advice or Financial Reversal.	<CardFinancial>	0 - n
CardFee	Describes a fee (and commission). <b>Note:</b> Not applicable to the Discover Global Network.	<CardFee>	0 - n
MasterCardFee	Describes a Financial Advice or Financial Reversal MasterCard fee.	<MasterCardFee>	0 - n
CardChrgBackRepRes	Describes a Chargeback, Chargeback Reversal, Representation or Representation Reversal.	<CardChrgBackRepRes>	0 - n

**Note:** Primary elements within an XML message depends on the card activity for the period being reported. For example, <CardChrgBackRepRes> elements are only present when a chargeback (or reversal) or Representation (or reversal) is reported.

## Non Clearing Report XML Example

This example shows the Primary Elements in a Non Clearing Report.

```
<?xmlversion="1.0"encoding="utf-8"?>
<Transactions>
  <CardAuthorisation>...detail omitted...</CardAuthorisation>
  <CardOnlineFinancial>...detail omitted...</CardOnlineFinancial>
  <CardFee>...detail omitted...</CardFee>
  <CardLoadUnload>...detail omitted...</CardLoadUnload>
  <CardBalAdjust>...detail omitted...</CardBalAdjust>
  <CardEvent>...detail omitted...</CardEvent>
  <ApprovedAgencyBanking>...detail omitted...</ApprovedAgencyBanking>
  <AgencyBankingFee>...detail omitted...</AgencyBankingFee>
</Transactions>
```

## Clearing Report XML Example

This example shows the Primary Elements in a Clearing Report.

```
<?xmlversion="1.0"encoding="utf-8"?>
<Transactions>
  <CardFinancial>...detail omitted...</CardFinancial>
  <CardFee>...detail omitted...</CardFee>
  <MasterCardFee>...detail omitted...</MasterCardFee>
```

```
<CardChrgBackRepRes>...detail omitted...</CardChrgBackRepRes>  
</Transactions>
```

# Non-clearing Report Elements

---

## 2.2 CardAuthorisation

CardAuthorisation provide details of payment authorisation advices. There are two types of CardAuthorisation records:

- Authorisation Advice
- Authorisation Reversal

You can use the [RecType](#) element to determine the type of record.

You can use the [AuthId](#) element to uniquely identify the record and distinguish it from all other CardAuthorisation records.

Child Element	Description	Data Type	Required	Constraints / Permitted Values
RecType	Record type, indicates <i>Advice</i> or <i>Reversal</i> .	<RecType>	Yes	See the <a href="#">RecType</a> sub-element
Auth_type	Details on the type of authorisation for distinguishing between normal authorisations and pre-authorisations (or pre-auths).	xs:string	Yes	See the <a href="#">Auth_type</a> sub-element
AuthId	Unique identifier for this CardAuthorisation record.	xs:unsignedLong	Yes	0 to 2 <sup>64</sup>
AuthTxnId	Alternative unique identifier of a CardAuthorisation record.	xs:unsignedInt	Yes	0 to 2 <sup>32</sup>
Traceid_Lifecycle	Lifecycle Trace ID. A transaction lifecycle identifier that allows you to track a transaction across its full lifecycle. This value is identical for all messages relating to the same transaction. For example, the following messages relating the same transaction will all have an identical Lifecycle Trace ID value: Authorisation, Second incremental authorisation, authorisation reversal, Financial Presentment, Chargeback, Second Presentment and Second Chargeback.  If there is more than one authorisation for	xs:string	Yes	See the <a href="#">Traceid_Lifecycle</a> sub-element

Child Element	Description	Data Type	Required	Constraints / Permitted Values
	the same transaction, both authorisations will have the same value.			
LocalDate	The date and time the record was generated by the terminal (POS or ATM) or acquirer in the local timezone.	<LocalDate>	Yes	See the <a href="#">LocalDate</a> sub-element
LocalDateUTC	The transaction date and Time in UTC as received from Mastercard, Visa, and MNE for the matching authorisation of the advice or reversal.	<LocalDateUTC>	Yes	See the <a href="#">LocalDateUTC</a> sub-element
SettlementDate	The date the transaction was processed (in UK time).	<SettlementDate>	Yes	See the <a href="#">SettlementDate</a> sub-element
Card	Details of the card used in the transaction.	<Card>	Yes	See the <a href="#">Card</a> sub-element
Account	Details of the cardholder account.	<Account>	Yes	See the <a href="#">Account</a> sub-element
TxnCode	Indicates the type of transaction.	<TxnCode>	Yes	See the <a href="#">TxnCode</a> sub-element
TxnAmt	Indicates the value of the transaction requested by the cardholder.	<BasicAmount>	Yes	See the <a href="#">TxnAmt</a> sub-element
CashbackAmt	Details of cashback requested by the cardholder.	<BasicAmount>	Yes	See the <a href="#">CashbackAmt</a> sub-element
BillAmt	The amount posted to the cardholder account. Note that the amount does not include interchange.	<RateAmount>	Yes	See the <a href="#">BillAmt</a> sub-element
ApprCode	The Approval Code generated by the issuer and printed on the receipt.	<ApprCode>	Yes	See the <a href="#">ApprCode</a> sub-element
Trace	Information used to uniquely identify the transaction.	<Trace>	Yes	See the <a href="#">Trace</a> sub-element
MerchCode	A unique code	<MerchCode>	Yes	See the <a href="#">MerchCode</a>

Child Element	Description	Data Type	Required	Constraints / Permitted Values
	identifying the merchant (also known as the <i>Card Acceptor Identifier</i> ).			sub-element
Term	Describes the terminal used for the transaction.	<Term>	Yes	See the <b>Term</b> sub-element
Schema	Indicates the name of the card scheme.	<Schema>	Yes	See the <b>Schema</b> sub-element
AcquirerCountry	The acquirer's country code	<AcquirerCountry>	No	See the <b>AcquirerCountry</b> sub-element
Txn	Describes the validation and authentication properties used in a transaction.	<Txn>	Yes	See the <b>Txn</b> sub-element
MsgSource	Describes the derivative source of the record.	<MsgSource CardAuthorisation>	Yes	See the <b>MsgSource</b> sub-element
PaddingAmt	The amount of padding applied to the authorisation, which is the amount by which the authorisation is Greater than the corresponding financial transaction.	<BasicAmount>	Yes	See the <b>PaddingAmt</b> sub-element
Rate_Fee	The amount of any rate-based POS or ATM fee that was charged.	xs:decimal	Yes	
Fixed_Fee	The amount of any fixed POS or ATM fee that was charged.	xs:decimal	Yes	
CommissionAmt	The amount of commission applied to the authorisation, which is the indication of the charges applicable to the corresponding Financial Transaction.	<BasicAmount>	Yes	See the <b>CommissionAmt</b> sub-element
Classification	Merchant classification.	<Classification>	Yes	See the <b>Classification</b> sub-element
Response	Indicates transaction approval.	<Response>	Yes	See the <b>Response</b> sub-element

Child Element	Description	Data Type	Required	Constraints / Permitted Values
OrigTxnAmt	The value of the original transaction amount requested by the cardholder (only used in CardAuthorisation reversals).	<PartialAmount>	If Applicable	Only applicable if the RecType is "REV", See the OrigTxnAmt sub-element
ReversalReason	The reason for the reversal (only used in CardAuthorisation reversals).	<ReversalReason>	If Applicable	Only applicable if the RecType is "REV". See the ReversalReason sub-element
PaymentToken	This element is populated from Payment Token data when a Payment Token was used for the transaction. If no Payment Token was used, then the <i>PaymentToken</i> element is omitted.  <b>Note:</b> Not applicable to Discover Global Network.	<PaymentToken>	If Applicable	See the PaymentToken sub-element
Sender	Provides details of the sender of the payment, where there is a money transfer.  <b>Note:</b> Not applicable to Discover Global Network.	<Sender>	If Applicable	See the Sender sub-element
Receiver	Provides details of the receiver of the payment, where there is a money transfer.  <b>Note:</b> Not applicable to Discover Global Network.	<Receiver>	If Applicable	See the Receiver sub-element

## 2.3 CardOnlineFinancial

The CardOnlineFinancial primary element is used for single message transactions for the requirements of card payment networks in the US.

**Note:** This element is not applicable to the Discover Global Network.

Child Element	Description	Data Type	Required	Constraints / Permitted Values
RecType	Record type, indicates Advice or Reversal.	RecType	Yes	See the RecType sub-element
Auth_type	Details on the type of authorisation for distinguishing between normal authorisations and pre-authorisations (or pre-auths).	xs:string	Yes	See the Auth_type subelement
OnlineFinId	Unique identifier for the CardOnlineFinancial record. record.	xs:unsignedLong	Yes	0 to 2 <sup>64</sup>
OnlineFinTxnId	Alternative identifier of the CardOnlineFinancial record.	xs:unsignedInt	Yes	0 to 2 <sup>32</sup>
Traceid_Lifecycle	A transaction lifecycle identifier that allows you to track a transaction across its full lifecycle, enabling linkage of authorisations and financial messages relating to the same underlying transaction. The value is aligned with the EHI traceid_lifecycle field where present.	xs:string	Yes	See the Traceid_Lifecycle sub-element
LocalDate	The date and time the record was generated by the terminal (POS or ATM) or acquirer in the local timezone.	<LocalDate>	Yes	See the LocalDate sub-element.
LocalDateUTC	The transaction date and Time in UTC as received from Mastercard, Visa and MNE.	Numeric	Yes	Format:MMDDHHMMSS 10 digits
SettlementDate	The date the transaction was processed (in UK time).	<SettlementDate>	Yes	See the SettlementDate sub-element
SchemeSettlementDate	Settlement date value for the transaction by Mastercard, Visa, Thredd or MNE.	xs:string	Yes	4-digit format of mmyy
SchemeReconciliationDate	The	xs:string	Yes	4-digit format of mmyy

Child Element	Description	Data Type	Required	Constraints / Permitted Values
	Mastercard/Visa/MNE reconciliation date for the transaction.			
CycleNumber	Reconciliation cycle number (relevant to Mastercard only).	<CycleNumber>	Yes	Currently, this is set to 1.
Card	Provides details of the card used in the transaction.	<Card>	Yes	See the <a href="#">Card</a> sub-element
Account	Details of the cardholder account.	<Account>	Yes	See the <a href="#">Account</a> sub-element
TxnCode	Indicates the type of transactions.	<TxnCode>	Yes	See the <a href="#">TxnCode</a> sub-element
TxnAmt	The transaction amount.	<BasicAmount>	Yes	See the <a href="#">TxnAmt</a> sub-element
CashbackAmt	The Cashback amount (if applicable).	<Basicmount>	Yes	See the <a href="#">CashbackAmt</a> sub-element
BillAmt	The amount posted to the cardholder account, which does not include interchange.	<RateAmount>	Yes	See the <a href="#">BillAmt</a> sub-element
SettlementAmt	The amount posted to the settlement account.	<SettlementAmt>	Yes	See the <a href="#">Settlement</a> sub-element
OrigTxnAmt	Original Transaction Amount. The value of the original transaction requested by the cardholder. This is used where there are partial amounts.	<PartialAmount>	Yes	See the <a href="#">OrigTxnAmt</a> sub-element
VATAmt	Amount of Value Added Tax.	<VATAmt>	No	See the <a href="#">VATAmt</a> sub-element
Additional_Amt_DE54	Additional amounts field where additional fees such as card network fees are held.	<Additional_Amt_DE54>	No	See the <a href="#">Additional_Amt_DE54</a> sub-element
ApprCode	The Approval Code generated by the issuer and printed on the receipt.	<ApprCode>	Yes	See the <a href="#">ApprCode</a> sub-element
Trace	Information used to uniquely identify the transaction. (Mastercard only; Visa is empty)	<Trace>	Yes	See the <a href="#">Trace</a> sub-element
MerchCode	A unique code identifying	<MerchCode>	Yes	See the <a href="#">MerchCode</a> sub-

Child Element	Description	Data Type	Required	Constraints / Permitted Values
	the Merchant (also known as the Card Acceptor Identifier.)			element.
Term	Describes the terminal used for the transaction	<Term>	Yes	See the <a href="#">Term</a> sub-element
Schema	Indicates the name of the card scheme.	<Schema>	Yes	See the <a href="#">Schema</a> sub-element
AcquirerCountry	The acquirer's country code	<AcquirerCountry>	No	See the <a href="#">AcquirerCountry</a> sub-element
Txn	Describes the validation and authentication properties used in a transaction.	<Txn>	Yes	See the <a href="#">Txn</a> sub-element
MsgSource	Describes the derivative source of the record.	<MsgSource>	Yes	Currently, this is only used for Visa.
Rate_Fee	The amount of any rate-based POS or ATM fee that was charged.	xs:decimal	Yes	
Fixed_Fee	The amount of any fixed POS or ATM fee that was charged.	xs:decimal	Yes	
CommissionAmt	The amount of commission applied to the authorisation. Commission is defined as an indication of the charges applicable to the corresponding Financial Transaction.	<BasicAmount>	Yes	See the <a href="#">CommissionAmt</a> sub-element
Classification	Merchant classification.	<Classification>	Yes	See the <a href="#">Classification</a> sub-element
Response	Indicates transaction approval.	<Response>	Yes	See the <a href="#">Response</a> sub-element
ReversalReason	The reason for the reversal. This is only used in CardAuthorisation reversals.	<ReversalReason>	Yes	See the <a href="#">ReversalReason</a> sub-element
PaymentToken	This element is populated from payment token data when used for the transaction. If a payment token is not used, then the <a href="#">PaymentToken</a> element is omitted.	<PaymentToken>	Yes	See the <a href="#">PaymentToken</a> sub-element
Sender	Provides details of the	<Sender>	No	See the <a href="#">Sender</a> sub-element

Child Element	Description	Data Type	Required	Constraints / Permitted Values
	sender of the payment, where there is a money transfer.			
Receiver	Provides details of the receiver of the payment, where there is a money transfer.	<Receiver>	No	See the Receiver sub-element
FIID	Forwarding Institution identification code.	<FIID>	No	See the FIID sub-element
SettlementIndicator	Indicator for Domestic or International settlement.	<SettlementIndicator>	No	See the SettlementIndicator sub-element
BSA	Business Service Arrangement type code (Mastercard only; Visa will always be empty).	<BSA>	No	See the BSA sub-element

## 2.4 CardFee

The CardFee primary element describes Card Fee records. The FeeClass child element, as described below, distinguishes between the permissible types.

**Note:** The CardFee element is present in both Clearing Reports and Non-Clearing Reports. The Clearing report contains any interchange fees and the Non-Clearing report contains any non-interchange fees. For details, the [FeeClass](#) sub-element.

**Note:** This element is not applicable to the Discover Global Network.

Child Element	Description	Data Type	Required	Constraints / Permitted Values
CardFeeld	Identifier for a CardFee record. Note that if there is a non-domestic fee and an FX fee on the same transaction, they share the same <a href="#">CardFeeld</a> .	xs:unsignedLong	Yes	0 to 2 <sup>64</sup>
LocalDate	The date and time the terminal (POS or ATM) or acquirer generates the record in the local timezone.	<LocalDate>	Yes	See the <a href="#">LocalDate</a> sub-element
SettlementDate	The date when the transaction has been processed.	<Settlement Date>	Yes	See the <a href="#">SettlementDate</a> sub-element
Card	Provides details of the card related to the fee.	<Card>	Yes	See the <a href="#">Cards</a> sub-element
Account	Provides details of the cardholder account related to the fee.	<Account>	Yes	See the <a href="#">Accounts</a> sub-element
Txid	If applicable, the <i>FinId</i> of the related <i>CardFinancial</i> (transaction) record for this CardFee record (foreign key). For Fee Collection records, it shows the <i>AuthId</i> of the related <i>CardAuthorisation</i> record (if found) If a matching <i>CardAuthorisation</i> or <i>CardFinancial</i> record cannot be found, the Id shows as 0.	xs:unsignedLong	Yes	0 to 2 <sup>64</sup> If not applicable, use default value 0
TxnCode	Indicates the type of transaction.	<TxnCode>	No	See the <a href="#">TxnCode</a> sub-element
MerchCode	A unique code identifying the merchant (also known as the <i>Card Acceptor Identifier</i> )	<MerchCode>	No	See the <a href="#">MerchCode</a> sub-element
MsgSource	Describes the derivative source of the record.	<MsgSource>	No	See the <a href="#">MsgSource</a> sub-element
FeeClass	Describes the derivation and nature of the fee.	<FeeClass>	Yes	See the <a href="#">FeeClass</a> sub-element
LoadUnloadId	If applicable the LoadUnloadId of the related CardLoadUnload record for this CardFee Record (foreign key).	xs:unsignedLong	No	0 to 2 <sup>64</sup>
Desc	Fee description.	<Desc>	Yes	See the <a href="#">Desc</a> sub-element

Child Element	Description	Data Type	Required	Constraints / Permitted Values
FeeAmt	<p>The FeeAmt represents the fee amount. This has the following behaviour:</p> <ul style="list-style-type: none"> <li>When FeeClass type is 1 then it is the fee amount for a Card Load, Expiry, Recurring payment, FX, SMS, Domestic or non-Domestic Fee as set up by the Programme Manager.</li> <li>When FeeClass type is 4 or 5 then it is a Scheme fee, such as an Interchange, Chargeback or ATM Fee Collection Fee from the Scheme.</li> </ul>	<Direction Amount>	No	See the <a href="#">FeeAmt</a> sub-element
Amt	<p>This amount is described as follows:</p> <ul style="list-style-type: none"> <li>For Scheme fees (see <a href="#">FeeClass</a>: type = 2, 4 and 5), this is the settlement amount posted to the settlement account.</li> <li>When the fee is NOT a Settlement (see <a href="#">FeeClass</a>: type = 1), this is the fee billed (posted) to the cardholder's account.</li> </ul>	<Direction Amount>	Yes	<p>See the <a href="#">Amt</a> sub-element</p> <p>When a fee is levied against the cardholder, the normal direction is: "debit" for <a href="#">FeeClass</a> type = 1, 2 &amp; 5 "credit" for <a href="#">FeeClass</a> Type = 4</p>
FIID	Forwarding Institution identification code.	<FIID>	No	See the <a href="#">FIID</a> sub-element
ReasonCode	Message reason code.	xs:string	Yes	<p>Only applicable for settlement</p> <p>See <a href="#">Message_Reason_Codes.htm</a></p> <p>For Fees, see the <a href="#">FeeClass</a> sub-element</p>
Recon	Details of the reconciliation.	<Recon>	No	See the <a href="#">Recon</a> sub-element

## Non-Clearing Report Example

```

<CardFee>
  <CardFeeId>13961469923</CardFeeId>
  <LocalDate>20240213033057</LocalDate>
  <SettlementDate>20240213</SettlementDate>
  <Card PAN="1132466665781123" MaskedPAN="113246*****1123" product="MCRD" programid="ONEUKA"

  <Account no="246666578" type="01" />
  <TxId>13961469923</TxId>
  <FeeClass interchangeTransaction="no" type="1" code="1000" />
  <LoadUnloadId>0</LoadUnloadId>
  <Desc>CCB ATM A5600225      DOLNA BANYA  BGR</Desc>
  <FeeAmt value="0.50" currency="826" direction="debit" />
  <Amt value="0.50" currency="826" direction="debit" />
  <ReasonCode />
</CardFee>

```

## Clearing Report Example

```

<CardFee>
  <CardFeeId>843249</CardFeeId>
  <LocalDate>20190326000000</LocalDate>
  <SettlementDate>20200103</SettlementDate>

```

```
<Card PAN="8062328177229342" MaskedPAN="806232*****9342" product="VISA" programid="GPS"  
productid="9815" branchcode="00000000" />  
<Account no="232817722" type="02" />  
<TxId>3762429334</TxId>  
<FeeClass interchangeTransaction="no" type="1" code="1000" />  
<LoadUnloadId>0</LoadUnloadId>  
<Desc>Domestic Fee</Desc>  
<FeeAmt value="5.00" currency="826" direction="debit" />  
<Amt value="5.00" currency="826" direction="debit" />  
<ReasonCode />  
<Recon date="20191205" cycle="05" />  
</CardFee>
```

## 2.5 CardLoadUnload

The CardLoadUnload primary element is used to describe the following records:

- Card Loads (loading funds onto a card account) and Card Load Reversals
- Card Unloads (discharging funds from a card account) and Card Unload Reversals

You can use the [RecordType](#) element to determine the type of record.

**Note:** Not primary element is not applicable to the Discover Global Network.

Child Element	Description	Data Type	Required	Constraints / Permitted Values
RecordType	Indicates whether this is a Card Load, Load Reversal, Unload or Unload reversal.	xs:string	Yes	Valid values are: <ul style="list-style-type: none"> <li>• LOAD</li> <li>• LOADREV</li> <li>• UNLOAD</li> <li>• UNLOADREV</li> </ul>
LoadUnloadId	A unique identifier for the CardLoadUnload record.	xs:unsignedLong	Yes	0 to 2 <sup>64</sup>
LocalDate	The local date and time of the Load/Unload in the local timezone.	<LocalDate>	Yes	See the <a href="#">LocalDate</a> sub-element
SettlementDate	The settlement date and time for the Load/Unload.	<SettlementDate>	Yes	See the <a href="#">SettlementDate</a> sub-element
Card	Provides details of the card's attributes.	<Card>	Yes	See the <a href="#">Card</a> sub-element
Account	Details of the cardholder account.	<Account>	Yes	See the <a href="#">Account</a> sub-element
MerchCode	A unique code identifying the merchant (also know as the Card Acceptor Identifier).	<MerchCode>	No	See the <a href="#">MerchCode</a> sub-element
Amount	The value of the Load, Load Reversal, Unload or Unload Reversal.	<BasicAmount>	Yes	See the <a href="#">BasicAmount</a> sub-element
Desc	Description of the card load or unload, as supplied when the card was loaded or unloaded.	<Desc>	Yes	See the <a href="#">Desc</a> sub-element
Load	Describes Load/Unload source and type.	<LoadSource>	Yes	See the <a href="#">LoadSource</a> sub-element

### Example (Load)

```

<CardLoadUnload>
  <RecordType>LOAD</RecordType>
  <LoadUnloadId>13964492698</LoadUnloadId>
  <LocalDate>20240213172407</LocalDate>
  <SettlementDate>20240213</SettlementDate>
  <Card PAN="5792883020134123" MaskedPAN="579288*****4123" product="MCRD" programid="GPS"
  productid="1463" branchcode="00000000" />
  <Account no="288301830" type="01" />
  <MerchCode />
  <Amount value="5.05" currency="826" direction="credit" />
  <Desc>Load from primary card: 5792883018303844</Desc>
  <Load Source="79" Type="0" FixedFee="0.00" Rate_Fee="0.00" />

```

</CardLoadUnload>

## 2.6 Approved Agency Banking Transaction

**Note:** This element is only relevant if you are using the Agency Banking service.

**Note:** This sub-element is not applicable to the Discover Global Network.

The ApprovedAgencyBanking primary element is used to describe the following accepted activity:

- BACS or Faster Payment Receipt and reversal
- Outbound Faster Payment or Direct Debit Payment and reversal
- Transfers between card holder's own accounts and reversals
- Inter-program payments between the Programme Manager's customers and reversals

You can use the [CashType](#) element to uniquely identify the record and distinguish it from all other CardEvent records.

Child Element	Description	Data Type	Required	Constraints / Permitted Values
CashType	Cash type, indicates type of receipt, payment or cash transfer.	xs:string	Yes	Valid values are: <ul style="list-style-type: none"> <li>• RCP (Receipt)</li> <li>• RCPREV (Reversal)</li> <li>• PAY (Payment)</li> <li>• PAYREV (Reversal)</li> <li>• TFR (Transfer)</li> <li>• P2P (Peer-to-Peer)</li> <li>• P2PREV (Peer-to-Peer reversal)</li> </ul>
BankingId	Unique identifier for this ApprovedAgencyBanking record.	xs:unsignedLong	Yes	0 to 2 <sup>64</sup>
File	Provides details of the file within which notification of the receipt was received, or the name of the file in which the outbound payment was submitted for settlement.	<File>	No	See the <a href="#">File</a> sub-element
SettlementDate	The settlement date for the transaction.	<SettlementDate>	Yes	See the <a href="#">SettlementDate</a> sub-element
Card	Provides details of the card used in the transaction.	<Card>	Yes	See the <a href="#">Card</a> sub-element
AgencyAccount	Provides details of the cardholder account and Agency Bank account details.	<AgencyAccount>	Yes	See the <a href="#">AgencyAccount</a> sub-element
External	Provides details of the external bank account on the opposite end of the transaction (source of a receipt or destination of a payment).	<External>	Yes	See the <a href="#">External</a> sub-element
CashCode	Provides details of the cash transaction.	<CashCode>	Yes	See the <a href="#">CashCode</a> sub-element
Desc	The reference quoted on the receipt or payment. This field may be empty.	<Desc>	Yes	See the <a href="#">Desc</a> sub-element
CashAmt	The amount of the receipt or payment before deduction of any applicable bank charges.	<RateAmount>	Yes	See the <a href="#">CashAmt</a> sub-element

Child Element	Description	Data Type	Required	Constraints / Permitted Values
Fee	The fee applied to the cash receipt or payment.	<Fee>	Yes	See the Fee sub-element
BillAmt	The amount posted to the cardholder account.	<RateAmount>	Yes	See the BillAmt sub-element
OrigTxnAmt	Original transaction amount. The value of the original transaction requested by the cardholder. This is used in the case of the transaction being a reversal.	<PartialAmount>	If Applicable	See the OrigTxnAmt sub-element

## Example

```
<ApprovedAgencyBanking>
  <CashType>RCP</CashType>
  <BankingId>13962099212</BankingId>
  <SettlementDate>20240213</SettlementDate>
  <Card PAN="113246669224123" MaskedPAN="113246*****4123" product="MCRD" programid="ONEUKA"
  productid="4368" branchcode="" />
  <AgencyAccount no="246666922" type="01" sortcode="040083" bankacc="02548356" name="Emilia Ionita" />
  <External sortcode="401000" bankacc="94771656" name="COICEA M" />
  <CashCode direction="credit" CashType="fpy" CashGroup="rcp" />
  <Desc> </Desc>
  <CashAmt value="60.00" currency="826" />
  <Fee value="1.25" currency="826" direction="credit" />
  <BillAmt value="60.00" currency="826" rate="0" />
</ApprovedAgencyBanking>
```

## 2.7 Declined Agency Banking Transaction

**Note:** This element is only relevant if you are using the Agency Banking service.

**Note:** This element is not applicable to Discover Global Network.

The DeclinedAgencyBanking primary element describes the following declined activity for which the cardholder did not receive or lose value:

- BACS or Faster Payment Receipt and reversal
- Outbound Faster Payment or Direct Debit Payment and reversal
- Transfers between card holder's own accounts and reversals
- Inter program payments between the Programme Manager's customers and reversals

You can use the [CashType](#) element to uniquely identify the record and distinguish it from all other DeclinedAgencyBanking records.

Child Element	Description	Data Type	Required	Constraints / Permitted Values
CashType	Cash type, indicates the type of receipt, payment or cash transfer.	xs:string	Yes	Valid values are: <ul style="list-style-type: none"> <li>• RCP (Receipt)</li> <li>• RCPREV (Reversal)</li> <li>• PAY (Payment)</li> <li>• PAYREV (Reversal)</li> <li>• TFR (Transfer)</li> </ul>
BankingId	Unique identifier for this ApprovedAgencyBanking record.	xs:unsignedLong	Yes	0 to 2 <sup>64</sup>
File	Provides details of the file within which notification of the receipt was received, or the filename in which the outbound payment was submitted for settlement.	<File>	No	See the <a href="#">File</a> sub-element
SettlementDate	The value date for the transaction.	<SettlementDate>	Yes	See the <a href="#">SettlementDates</a> sub-element
Card	Provides details of the card used in the transaction.	<Card>	Yes	See the <a href="#">Card</a> sub-element
AgencyAccount	Provides details of the cardholder account and Agency Bank account details	<AgencyAccount>	Yes	See the <a href="#">AgencyAccount</a> sub-element
External	Details of the external bank account on the opposite end of the transaction. This is the source of a receipt or destination of a payment.	<External>	Yes	See the <a href="#">External</a> sub-element
CashCode	Provides details of the cash transaction.	<CashCode>	Yes	See the <a href="#">CashCode</a> sub-element
Desc	The reference quoted on the receipt or payment. This field may be empty.	<Desc>	Yes	See the <a href="#">Desc</a> sub-element
CashAmt	The amount of the receipt or payment before deduction of any applicable bank charges.	<RateAmount>	Yes	See the <a href="#">CashAmt</a> sub-element
DeclineReason	The reason a receipt was declined and returned to source or a payment request	<DeclineReason>	Yes	See the <a href="#">DeclineReason</a> sub-

Child Element	Description	Data Type	Required	Constraints / Permitted Values
	was rejected and not processed.			element
OrigTxnAmt	Original transaction amount. The value of the original transaction requested by the cardholder. This is used where a transaction is a reversal.	<PartialAmount>	If Applicable	See the OrigTxnAmt sub-element

## Example

```
<DeclinedAgencyBanking>  
  <CashType>RCP</CashType>  
  <BankingId>13962741416</BankingId>  
  <SettlementDate>20240213</SettlementDate>  
  <Card PAN="1132735542365123" MaskedPAN="113273*****5123" product="MCRD" programid="ONEUKA"  
  productid="4368" branchcode="" />  
  <AgencyAccount no="273554236" type="01" sortcode="040083" bankacc="01665839" name="Daniel Velichkov" />  
  <External sortcode="TRWIBE" bankacc="P1508951" name="Daniel Velichkov" />  
  <CashCode direction="credit" CashType="fpy" CashGroup="rcp" />  
  <Desc> </Desc>  
  <CashAmt value="5.00" currency="826" />  
  <DeclineReason>00</DeclineReason>  
</DeclinedAgencyBanking>
```

## 2.8 Agency Banking Fee

**Note:** This element is only relevant if you are using the Agency Banking service.

**Note:** This element is not applicable to the Discover Global Network.

The AgencyBankingFee primary element is used to describe any bank charges applied to an Agency Banking transaction.

Child Element	Description	Data Type	Required	Constraints / Permitted Values
BankingFeeId	Unique identifier for this ApprovedAgencyBanking record.	xs:unsignedLong	Yes	0 to 2 <sup>32</sup>
SettlementDate	The settlement date for the transaction.	<SettlementDate>	Yes	See the <a href="#">SettlementDate</a> sub-element
Card	Provides details of the card used in the transaction.	<Card>	Yes	See the <a href="#">Card</a> sub-element
AgencyAccount	Provides details of the cardholder account and Agency Bank account details.	<AgencyAccount>	Yes	See the <a href="#">AgencyAccount</a> sub-element
AbId	The BankingId of the related ApprovedAgencyBanking or DeclinedAgencyBanking record for this Agency Banking Fee Record (foreign key).	xs:string	Yes	0 to 2 <sup>64</sup> If not applicable, use default value 0
Desc	The reference quoted on the bank charge. This field may be empty.	<Desc>	Yes	See the <a href="#">Desc</a> sub-element
Amt	The amount of the bank charge applied to the receipt or payment.	<Direction Amount>	Yes	See the <a href="#">Amt</a> sub-element

### Example

```

<AgencyBankingFee>
  <BankingFeeId>902400</BankingFeeId>
  <SettlementDate>20200101</SettlementDate>
  <Card PAN="8063993043846328" MakedPAN="806399*****6328" product="MCRD" programid="GPS"
    productid="9916" branchcode="" />
  <AgencyAccount no="399304384" type="01" sortcode="" bankacc="" name="N/A" />
  <AbId>2300456354</AbId>
  <Desc>Unloading bank transaction 109807 from suspense account. Suspense transaction ID 2300456353</Desc>
  <Amt value="1.25" currency="826" direction="debit" />
</AgencyBankingFee>

```

## 2.9 CardBalAdjust

CardBalAdjust records are used to indicate balance adjustments to a card's account.

You can use the [AdjustId](#) element to uniquely identify the record and distinguish it from all other CardBalAdjust records.

**Note:** This element is not applicable to the Discover Global Network.

Child Element	Description	Data Type	Required	Constraints/ Permitted Values
LocalDate	The date and time the record was generated by the terminal (POS or ATM) or acquirer in the local timezone.	<LocalDate>	Yes	See the <a href="#">LocalDate</a> sub-element
AdjustId	Identifier of this adjustment.	xs:unsignedLong	Yes	0 to 2 <sup>64</sup>
SettlementDate	The date the transaction has been processed.	<SettlementDate>	Yes	See the <a href="#">SettlementDate</a> sub-element
Card	Details of the card used in the transaction.	<Card>	Yes	See the <a href="#">Cards</a> sub-element
Account	Details of the cardholder account.	<Account>	Yes	See the <a href="#">Account</a> sub-element
Amount	The amount, currency and direction (debit/credit) for the load and unload.	<DirectionAmount>	Yes	See the <a href="#">Amount</a> sub-element
MerchCode	A unique code identifying the Merchant (also known as the Card Acceptor Identifier).	<MerchCode>	No	See the <a href="#">MerchCode</a> sub-element
Desc	A text description of the unload.	<Desc>	Yes	See the <a href="#">Desc</a> sub-element
AdjustType	The type of adjustment: <i>Actual</i> or <i>Block</i> .	<AdjustType>	Yes	See the <a href="#">AdjustType</a> sub-element

### Example

```

<CardBalAdjust>
  <LocalDate>20240213010242</LocalDate>
  <AdjustId>13961012925</AdjustId>
  <SettlementDate>20240213</SettlementDate>
  <Card PAN="5271278671128123" MaskedPAN="527127*****8123" product="MCRD" programid="POCKIT01"
  productid="1297" branchcode="00000000" />
  <Account no="127867112" type="01" />
  <Amount value="1.99" currency="826" direction="debit" />
  <MerchCode />
  <Desc>Monthly fee for 02-2024_ReferenceToDisplay=Pockit Standard</Desc>
  <AdjustType>Actual</AdjustType>
</CardBalAdjust>

```

## 2.10 CardEvent

CardEvent records indicate status changes to a given card.

**Note:** These element is not applicable to the Discover Global Network.

Child Element	Description	Data Type	Required	Constraints/ Permitted Values
Card	Details of the card used in the transaction.	<Card>	Yes	See the <a href="#">Card</a> sub-element
Event	Details of the event.	<Event>	Yes	See the <a href="#">Event</a> sub-element

### Example

```
<CardEvent>  
  <Card PAN="5793048251657123" MaskedPAN="579304*****7123" productid="1463" />  
  <Event Type="Activation" Source="2" ActivationDate="20240213161108" StatCode="" OldStatCode="" Date="20240213161108" trans-  
actionid="" />  
</CardEvent>
```

# Clearing Report Elements

---

## 2.11 CardFinancial

The CardFinancial primary element is used to describe the following records:

- Financial Advice, or
- Financial Reversal

You can use the [RecordType](#) element to determine the type of record.

Child Element	Description	Data Type	Required	Constraints / Permitted Values
RecordType	Record type, indicates <i>Advice</i> or <i>Reversal</i> .	xs:string	Yes	Valid values are: ADV, REV
FinId	Unique identifier for this CardFinancial record.	xs:unsignedLong	Yes	0 to 2 <sup>64</sup>
AuthId	The AuthId of the related CardAuthorisation record for this CardFinancial Record (primary key). Only present if there was a card authorisation.	xs:unsignedLong	If Applicable	0 to 2 <sup>64</sup>
PresentmentId	Alternative unique identifier for this CardFinancial Record, primary key in Thredd.	xs:unsignedLong	Yes	0 to 2 <sup>32</sup>
Traceid_Lifecycle	Lifecycle Trace ID. A transaction lifecycle identifier that allows you to track a transaction across its full lifecycle. This value is identical for all messages relating to the same transaction. For example, the following messages relating the same transaction will all have an identical Lifecycle Trace ID value: Authorisation, Second incremental authorisation, authorisation reversal, Financial Presentment, Chargeback, Second Presentment and Second Chargeback.  If there is more than one authorisation for	xs:string	Yes	See the <a href="#">Traceid_Lifecycle</a> sub-element

Child Element	Description	Data Type	Required	Constraints / Permitted Values
	the same transaction, both authorisations will have the same value.			
LocalDate	The date/time in which the transaction took place in the local timezone.	<LocalDate>	Yes	See the <a href="#">LocalDate</a> sub-element
LocalDateUTC	The transaction date and Time in UTC as received from Mastercard, Visa, and MNE for the matching authorisation of the financial advice or reversal.  <b>Note:</b> Not applicable to the Discover Global Network.	LocalDateUTC	Yes	See the <a href="#">LocalDateUTC</a> sub-element
SettlementDate	The settlement date for the transaction (UK date or as supplied by Mastercard).	<SettlementDate>	Yes	See the <a href="#">SettlementDate</a> sub-element
SchemeSettlementDate	Settlement date value for the transaction by Mastercard, Visa or Thredd.	<SchemeSettlementDate>	Yes	See the <a href="#">SchemeSettlementDate</a> sub-element
SchemeReconciliationDate	The Mastercard/Visa reconciliation date for the transaction.	<SettlementDate>	Yes	See the <a href="#">SettlementDate</a> sub-element
CycleNumber	Reconciliation cycle number (relevant to Mastercard only).	<CycleNumber>	Yes	See the <a href="#">CycleNumber</a> sub-element
Card	Provides details of the card used in the transaction.	<Card>	Yes	See the <a href="#">Cards</a> sub-element
Account	Provides details of the cardholder account.	<Account>	Yes	See the <a href="#">Accounts</a> sub-element
TxnCode	Indicates the type of transaction.	<TxnCode>	Yes	See the <a href="#">TxnCode</a> sub-element
TxnAmt	The transaction amount.	<BasicAmount>	Yes	See the <a href="#">TxnAmt</a> sub-element
CashbackAmt	The Cashback amount (if applicable).	<BasicAmount>	Yes	See the <a href="#">CashbackAmt</a> sub-element

Child Element	Description	Data Type	Required	Constraints / Permitted Values
BillAmt	The amount posted to the cardholder account. This does not include interchange.	<RateAmount>	Yes	See the <a href="#">BillAmt</a> sub-element
VATAmt	Amount of Value Added Tax.	<VATAmt>	No	See the <a href="#">VATAmt</a> sub-element
ApprCode	The <i>Approval Code</i> generated by the issuer and printed on the receipt.	<ApprCode>	Yes	See the <a href="#">ApprCode</a> sub-element
Trace	Information used to uniquely identify the transaction. (Mastercard only; Visa will be empty)  <b>Note:</b> Not applicable to the Discover Global Network.	<Trace>	Yes	See the <a href="#">Trace</a> sub-element
MerchCode	A unique code identifying the merchant (also known as the <i>Card Acceptor Identifier</i> )	<MerchCode>	Yes	See the <a href="#">MerchCode</a> sub-element
Term	Details of the terminal on which the transaction was actioned.	<Term>	Yes	See the <a href="#">Term</a> sub-element
Schema	Indicates the name of the card scheme.	<Schema>	Yes	See the <a href="#">Schema</a> sub-element
AcquirerCountry	The acquirer's country code	<AcquirerCountry>	No	See the <a href="#">AcquirerCountry</a> sub-element
Txn	Describes the validation / authentication properties used in a transaction.	<Txn>	Yes	See the <a href="#">Txn</a> sub-element
MsgSource	Describes the derivative source of the record.	<MsgSource>	Yes	See the <a href="#">MsgSource</a> sub-element
Fee	The interchange fee.	<DirectionAmount>	Yes	See the <a href="#">Fee</a> sub-element
FeeAmt	The fee amount. This is the sum total of any rate fee and fixed fee applied to the transaction (see <a href="#">Rate_</a>	< DirectionAmount>	Yes	See the <a href="#">FeeAmt</a> sub-element

Child Element	Description	Data Type	Required	Constraints / Permitted Values
	<a href="#">Fee</a> and <a href="#">Fixed_Fee</a> in the <a href="#">CardAuthorisation</a> record).			
FeeClass	Describes the derivation and nature of the fee.	<FeeClass>	Yes	See the <a href="#">FeeClass</a> sub-element
SettlementAmt	The settlement amount (Mastercard only).	<SettlementAmt>	Yes	See the <a href="#">SettlementSub_Elements_and_Attributes.htm</a> sub-element
ARN	The Acquirer Reference Number.	<ARN>	Yes	See the <a href="#">ARN</a> sub-element
FIID	Forwarding Institution Identification code.	<FIID>	Yes	See the <a href="#">FIID</a> sub-element
RIID	Receiving Institution Identification code.	<RIID>	Yes	See the <a href="#">RIID</a> sub-element
ReasonCode	Message reason code.	xs:string	If Applicable	See <a href="#">Message Reason Codes</a>
Classification	Merchant classification for the transaction.	<Classification>	Yes	See the <a href="#">Classification</a> sub-element
Response	Indicates whether transaction was approved or not.	<Response>	Yes	See the <a href="#">Response</a> sub-element
OrigTxnAmt	Original Transaction Amount. The value of the original transaction requested by the cardholder. This is used in the case of the transaction being a reversal.	<PartialAmount>	If Applicable	See the <a href="#">OrigTxnAmt</a> sub-element
CCAAmount	The Currency Conversion Assessment amount (Mastercard only; Visa will always be zero).  <b>Note:</b> Not applicable to Discover Global Network.	<CCAAmount>	Yes	See the <a href="#">CCAAmount</a> sub-element
SettlementIndicator	Indicator for Domestic or International settlement.	<SettlementIndicator>	If Applicable	See the <a href="#">SettlementIndicator</a> sub-element
Additional_Amt_DE54	Additional amounts	<Additional_Amt_DE54>	If	See the <a href="#">Additional_Amt_</a>

Child Element	Description	Data Type	Required	Constraints / Permitted Values
	<p>field where additional fees like transport fees are held.</p> <p><b>Note:</b> Not applicable to Discover Global Network.</p>		applicable	DE54 sub-element
BSA	<p>Business Service Arrangement type code (Mastercard only; Visa will always be empty).</p> <p><b>Note:</b> Not applicable to Discover Global Network.</p>	<BSA>	If applicable	See the BSA sub-element
PaymentToken	<p>This element is populated from Payment Token data when a Payment Token was used for the transaction. If no Payment Token was used, then the <i>PaymentToken</i> element is omitted.</p> <p><b>Note:</b> Not applicable to Discover Global Network.</p>	<PaymentToken>	If Applicable	See the PaymentToken sub-element
UniqueTransactionReference	<p>Unique transaction reference.</p> <p>Not applicable to Visa.</p>	<UniqueTransactionReference>	If applicable	See UniqueTransactionReference sub-element
SettlementRecapID	<p>Settlement Recap ID is a Discover Global Network specific data element. Discover members send financial transaction data grouped under recaps separately for each member. Settlement Recap ID defines the recap breakdown to help members for their reconciliation with Discover.</p>	<SettlementRecapID>	If applicable	See SettlementRecapID sub-element

## 2.11 CardFee

The CardFee primary element describes Card Fee records. The FeeClass child element, as described below, distinguishes between the permissible types.

**Note:** The CardFee element is present in both Clearing Reports and Non-Clearing Reports. The Clearing report contains any interchange fees and the Non-Clearing report contains any non-interchange fees. For details, the **FeeClass** sub-element.

**Note:** This element is not applicable to the Discover Global Network.

Child Element	Description	Data Type	Required	Constraints / Permitted Values
CardFeeld	Identifier for a CardFee record. Note that if there is a non-domestic fee and an FX fee on the same transaction, they share the same <a href="#">CardFeeld</a> .	xs:unsignedLong	Yes	0 to 2 <sup>64</sup>
LocalDate	The date and time the terminal (POS or ATM) or acquirer generates the record in the local timezone.	<LocalDate>	Yes	See the <a href="#">LocalDate</a> sub-element
SettlementDate	The date when the transaction has been processed.	<Settlement Date>	Yes	See the <a href="#">SettlementDate</a> sub-element
Card	Provides details of the card related to the fee.	<Card>	Yes	See the <a href="#">Cardsub-element</a>
Account	Provides details of the cardholder account related to the fee.	<Account>	Yes	See the <a href="#">Accounts sub-element</a>
Txid	If applicable, the <i>FinId</i> of the related <i>CardFinancial</i> (transaction) record for this CardFee record (foreign key). For Fee Collection records, it shows the <i>AuthId</i> of the related <i>CardAuthorisation</i> record (if found) If a matching <i>CardAuthorisation</i> or <i>CardFinancial</i> record cannot be found, the Id shows as 0.	xs:unsignedLong	Yes	0 to 2 <sup>64</sup> If not applicable, use default value 0
TxnCode	Indicates the type of transaction.	<TxnCode>	No	See the <a href="#">TxnCode</a> sub-element
MerchCode	A unique code identifying the merchant (also known as the <i>Card Acceptor Identifier</i> )	<MerchCode>	No	See the <a href="#">MerchCode</a> sub-element
MsgSource	Describes the derivative source of the record.	<MsgSource>	No	See the <a href="#">MsgSource</a> sub-element
FeeClass	Describes the derivation and nature of the fee.	<FeeClass>	Yes	See the <a href="#">FeeClass sub-element</a>
LoadUnloadId	If applicable the LoadUnloadId of the related CardLoadUnload record for this CardFee Record (foreign key).	xs:unsignedLong	No	0 to 2 <sup>64</sup>
Desc	Fee description.	<Desc>	Yes	See the <a href="#">Desc sub-element</a>

Child Element	Description	Data Type	Required	Constraints / Permitted Values
FeeAmt	<p>The FeeAmt represents the fee amount. This has the following behaviour:</p> <ul style="list-style-type: none"> <li>When FeeClass type is 1 then it is the fee amount for a Card Load, Expiry, Recurring payment, FX, SMS, Domestic or non-Domestic Fee as set up by the Programme Manager.</li> <li>When FeeClass type is 4 or 5 then it is a Scheme fee, such as an Interchange, Chargeback or ATM Fee Collection Fee from the Scheme.</li> </ul>	<Direction Amount>	No	See the <a href="#">FeeAmt</a> sub-element
Amt	<p>This amount is described as follows:</p> <ul style="list-style-type: none"> <li>For Scheme fees (see <a href="#">FeeClass</a>: type = 2, 4 and 5), this is the settlement amount posted to the settlement account.</li> <li>When the fee is NOT a Settlement (see <a href="#">FeeClass</a>: type = 1), this is the fee billed (posted) to the cardholder's account.</li> </ul>	<Direction Amount>	Yes	See the <a href="#">Amt</a> sub-element When a fee is levied against the cardholder, the normal direction is: "debit" for FeeClass type = 1, 2 & 5 "credit" for FeeClass Type = 4
FIID	Forwarding Institution identification code.	<FIID>	No	See the <a href="#">FIID</a> sub-element
ReasonCode	Message reason code.	xs:string	Yes	Only applicable for settlement See <a href="#">Message_Reason_Codes.htm</a> For Fees, see the <a href="#">FeeClass</a> sub-element
Recon	Details of the reconciliation.	<Recon>	No	See the <a href="#">Recon</a> sub-element
VATAmt	Amount of Value Added Tax.	<VATAmt>	No	See the <a href="#">VATAmt</a> sub-element

## Non-Clearing Report Example

```

<VATAmt value="0.5000" />
</CardFee>
```

## 2.12 MasterCardFee

MasterCardFee records are used to describe non-card Mastercard Fees. They only appear in the transaction XML if the Mastercard ICA is not shared between clients.

Child Element	Description	Data Type	Required	Constraints / Permitted Values
RecordType	Record type, used to distinguish between data types.	xs:string	Yes	See the <a href="#">RecordType</a> sub-element.
MastercardFeeld	Unique identifier for this fee record.	xs:unsignedLong	Yes	0 to 2 <sup>32</sup> .
MTID	Message Type Identifier. Takes values as supplied by Mastercard in the Chargeback Fee or Fee collection data	xs:unsignedint	Yes	Examples: 1442, 1644 and 1740. See <a href="#">Message Reason Codes</a>
Function_Code_024	Function Code for the fee record.  <b>Note:</b> This element is not applicable to the Discover Global Network.	<FunctionCode>	Yes	See the <a href="#">FunctionCode</a> sub-element.
Conversion_Rate_Reconciliation	Factor used in converting transaction amount to a reconciliation amount.  <b>Note:</b> This element is not applicable to the Discover Global Network.	xs:unsignedint	Yes	0 to 2 <sup>32</sup> .
Additional_Data_048	The additional data received from Mastercard.  <b>Note:</b> Not applicable to Discover Global Network.	xs:string	Yes	String. Refer to the <i>Mastercard IPM Clearing Formats manual</i> .
LocalDate	The date and time of the transaction in the local timezone.	<LocalDate>	Yes	See the <a href="#">LocalDate</a> sub-element.
SettlementDate	The settlement date and time for the transaction.	<Settlement Date>	No	See the <a href="#">SettlementDate</a> sub-element.
FeeClass	Describes the derivation and nature of the fee.	<MasterCard FeeClass>	Yes	For MasterCardFee records the FeeClass type="0", code="0" and interchangeTransaction="no".
Desc	Fee description. This field may be empty.	<Desc>	No	See the <a href="#">Desc</a> sub-element.
FeeAmt	The fee amount as received from Mastercard.  <b>Note:</b> For a chargeback,	<Direction Amount>	Yes	See the <a href="#">FeeAmt</a> sub-element.

Child Element	Description	Data Type	Required	Constraints / Permitted Values
	<p>this field provides details of any chargeback fees. For details of the chargeback amount, see <a href="#">&lt;BillAmt&gt;</a> in the <a href="#">CardChrgBackRepRes</a> record.</p>			
Amt	The net transaction amount expressed in the original transaction currency, as advised by Mastercard.	<Direction Amount>	Yes	See the <a href="#">Amt</a> sub-element.
ReasonCode	Message reason code.	xs:string	Yes	See <a href="#">Message Reason Codes</a> .
Data_Record_072	<p>Free form text for Mastercard fee messages.</p> <p><b>Note:</b> This element is not applicable to the Discover Global Network.</p>	xs:string	No	String, Refer to Mastercard IPM Clearing Formats Manual.
DE93_Txn_Dest_ID	Identifies the transaction destination institution.	xs:string	Yes	Length 6 - 11 digits.
DE94_Txn_Orig_ID	Identifies the transaction originator institution.	xs:string	No	Length 6 - 16 digits.
File_ID_PDS0105	Identifies the logical data file exchanged between Thredd and the clearing system.	xs:string	Yes	See the <a href="#">PDS0105</a> sub-element.
FileProcessDate	Date the Fee collection file was processed.	xs:string	Yes	In the format: YYYYMMDD HHMMSS.
Recon	Details of the reconciliation.	<Recon>	No	See the <a href="#">Recon</a> sub-element.
Settlement	Details of the settlement.	<Settlement>	No	See the <a href="#">Settlement</a> sub-element.
SettlementRecapID	Settlement Group identifier for Discover.	<SettlementRecapID>	If applicable	See <a href="#">SettlementRecapID</a> sub-element.

## Example

```

<MasterCardFee>
  <RecordType>FC</RecordType>
  <MastercardFeeId>8285</MastercardFeeId>

<Recon date="20200120" cycle="02" />
<Settlement date="20210121" cycle="01" />
</MasterCardFee>
```

## 2.13 CardChrgBackRepRes

CardChrgBackRepRes describes the following record types:

- **Chargeback Advice** – created when the issuer raises a chargeback notification to reclaim funds from a merchant after a disputed purchase. For example, the issuer raises a notification where the cardholder claimed that the transaction was fraudulent or that they did not receive the product that was purchased. The funds that were previously debited from the card for the disputed transaction are now returned to the card.
- **Chargeback Reversal** – created when the issuer reverses a previous chargeback notification (withdraws the chargeback).
- **Representation Advice** – created when a merchant disputes a chargeback by providing evidence that the reason for the chargeback claim was invalid.
- **Representation Reversal** – created by the acquirer when they want to withdraw the representation. For example, if the merchant provided insufficient or invalid evidence or missed the representation deadline.

You can use the [AdjustId](#) element to uniquely identify the record and distinguish it from all other CardChrgBackRepRes records.

Child Element	Description	Data Type	Required	Constraints / Permitted Values
RecordType	Indicates the type of CardChrgBackRepRes record.	xs:string	Yes	Valid values are: CB = Chargeback Advice CBREV = Chargeback Reversal REPRES = Representation Advice REPRESREV =Representation Reversal
ChgbackRepresId	Unique identifier for this CardChrgBackRepRes record.	xs:unsignedLong	Yes	0 to 2 <sup>64</sup>
Traceid_Lifecycle	Lifecycle Trace ID. A transaction lifecycle identifier that allows you to track a transaction across its full lifecycle. This value is identical for all messages relating to the same transaction. For example, the following messages relating the same transaction will all have an identical Lifecycle Trace ID value: Authorisation, Second incremental authorisation, authorisation reversal, Financial Presentment, Chargeback, Second Presentment and Second Chargeback.  If there is more than one authorisation for the same transaction, both authorisations will have the same value.	xs:string	Yes	See the <a href="#">Traceid_Lifecycle</a> sub-element
LocalDate	The date and time the record	<LocalDate>	Yes	See the <a href="#">LocalDate</a> sub-

Child Element	Description	Data Type	Required	Constraints / Permitted Values
	was generated by the terminal (POS or ATM) or acquirer in the local timezone.			element
SettlementDate	The date the transaction has been processed.	<SettlementDate>	Yes	See the SettlementDate sub-element
Card	Details of the card used in the transaction.	<Card>	Yes	See the Cardsub-element
Account	Details of the cardholder account.	<Account>	Yes	See the Accounts sub-element
TxnCode	Indicates the type of transaction.	<TxnCode>	Yes	See the TxnCode sub-element
TxnAmt	Indicates the value of the transaction requested by the cardholder.	<BasicAmount>	Yes	See the TxnAmt sub-element
CashbackAmt	Details of any cashback amount requested by cardholder. If no cashback is requested then populate with a zero value and the transaction currency code.  <b>Note:</b> Not applicable to Discover Global Network.	<BasicAmount>	Yes	See the CashbackAmt sub-element
BillAmt	The amount posted to the cardholder account. This does not include interchange.	<RateAmount>	Yes	See the BillAmt sub-element
ApprCode	The <i>approval code</i> generated by the issuer and printed on the receipt.	<ApprCode>	Yes	See the ApprCode sub-element
Trace	Information used to uniquely identify the transaction.  <b>Note:</b> Not applicable to Discover Global Network.	<Trace>	Yes	See the Trace sub-element
MerchCode	A unique code identifying the Merchant (also know as the <i>Card Acceptor Identifier</i> ).	<Merch Code>	Yes	See the MerchCode sub-element
Term	Describes the terminal used for the transaction.	<Term>	Yes	See the Term sub-element
Schema	Indicates the name of the card scheme.	<Schema>	Yes	See the Schema sub-element
Txn	Describes the validation or authentication properties used in a transaction.	<Txn>	Yes	See the Txn sub-element
MsgSource	Describes the derivative	<MsgSource>	Yes	See the MsgSource

Child Element	Description	Data Type	Required	Constraints / Permitted Values
	source of the record.			sub-element
Repeat	Information to show the number of the chargeback or representment.	xs:unsigned Byte	Yes	Valid values are: 1 = First chargeback / representment 2 = Second Chargeback / representment
SettlementAmt	The amount posted to the settlement account.	<SettlementAmt>	Yes	See the <a href="#">Settlement</a> sub-element
Fee	Interchange or service fee amount posted to the settlement account.	<DirectionAmount>	Yes	See the <a href="#">Fee</a> sub-element
ARN	Acquirer Reference Number.	<ARN>	Yes	See the <a href="#">ARN</a> sub-element
FIID	Forwarding Institution Identification code.  <b>Note:</b> Only applicable to Mastercard chargebacks.	<FIID>	No	See the <a href="#">FIID</a> sub-element
RIID	Receiving Institution Identification code.  <b>Note:</b> Only applicable to Mastercard chargebacks.	<RIID>	Yes	See the <a href="#">RIID</a> sub-element
ReasonCode	Message reason code.	xs:string	Yes	See <a href="#">Message_Reason Codes</a>
Classification	Merchant classification for the transaction.	<Classification>	Yes	See the <a href="#">Classification</a> sub-element
OrigTxnAmt	Original transaction amount. The value of the original transaction requested by the cardholder. This is used in the case of the transaction being a partial chargeback/representment, chargeback reversals or representment reversals.	<PartialAmount>	If applicable	See the <a href="#">OrigTxnAmt</a> sub-element
PartialReversal	Indicates if the amount reversed is a partial amount of the original chargeback.	Xs:boolean	If applicable	Valid values are: true = Partial Reversal; false = Full Reversal If not supplied, assumes "false".
SettlementCycle	Shows the settlement cycle for the chargeback.	<SettlementCycle>	Yes	See the <a href="#">SettlementCycle</a> sub-element
ReconciliationDate	Shows the reconciliation date for the chargeback.	<ReconciliationDate>	Yes	See the <a href="#">ReconciliationDate</a> sub-

Child Element	Description	Data Type	Required	Constraints / Permitted Values
				element
ReconciliationCycle	Shows the reconciliation cycle for the chargeback.	<ReconciliationCycle>	Yes	See the ReconciliationCycle sub-element
Usage	Indicates whether the chargeback is manually credited to the card.	<Usage>	Yes	See the Usage sub-element
Pending_Billing_Amount	Value of the chargeback billing amount.	< Pending_Billing_Amount>	Yes	See the Pending_Billing_Amount sub-element
SettlementIndicator	Indicator for <i>Domestic</i> or <i>International</i> settlement.	SettlementIndicator	If applicable	See the SettlementIndicator sub-element
Additional_Amt_DE54	Additional amounts field where additional fees such as card network fees are held.  <b>Note:</b> Not applicable to Discover Global Network.	<Additional_Amt_DE54>	If applicable	See the Additional_Amt_DE54 sub-element
ChargebackRefNum	Chargeback reference number, as displayed in Smart Client.  <b>Note:</b> Only applicable to Mastercard chargebacks.  <b>Note:</b> Not applicable to Discover Global Network.	<ChargebackRefNum>	If applicable	See the ChargebackRefNum sub-element

## SECTION 3: SUB-ELEMENTS AND ATTRIBUTES

This section contains details of the transaction XML schema sub-elements and attributes

## 3.1 Sub-elements and Attributes

This section describes the message sub-elements and attributes.

### 3.1.1 Sub-elements

Sub-elements are listed below in alphabetical order.

Account			LocalDate		SettlementIndicator
AcquirerCountry	BSA	Destination	LocalDateUTC	ReconciliationCycle	SchemeSettlementDate
Additional_Amt_DE54	Card	External	MastercardFeeClass	RecordType	Source
AdjustType	CashAmt	Event	MerchCode	RecType	Term
AgencyAccount	CashbackAmt	Fee	MsgSource	Response	Trace
Amount	CashCode	FeeAmt	OperationType	ReversalReason	Traceid_Lifecycle
Amt	CCAAmount	FeeClass	OrigTxnAmt	RIID	Txn
ApprCode	ChargebackRefNum	FIID	Other	Schema	TxnAmt
ARN	Classification	File	PaddingAmt	Sender	TxnCode
Auth_type	CommissionAmt	FunctionCode	Pending_Billing_Amount	Settlement	UniqueTransactionReference
BasicAmount	CycleNumber	FXConv	Recon	SettlementAmt	Usage
BillAmt	DeclineReason	LoadSource	Receiver	SettlementCycle	VATAmt
BookingType	Desc	LoadType	ReconciliationDate	SettlementDate	
BookingStatus					

### Account

The [Account](#) element describes a card account.

Attribute	Description	Data Type	Required	Constraints / Permitted Values								
no	The 9-digit Thredd public token linked to the card Primary Account Number (PAN).	xs:string	Yes	Alphanumeric, maximum 28 characters.								
type	Card type	xs:string	Yes	Numeric string, maximum 2 characters. Valid values are: <table border="1" data-bbox="1486 2003 1852 2240"> <thead> <tr> <th>Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>00</td> <td>Domestic Maestro</td> </tr> <tr> <td>01</td> <td>MasterCard</td> </tr> <tr> <td>02</td> <td>VisaCard</td> </tr> </tbody> </table>	Value	Description	00	Domestic Maestro	01	MasterCard	02	VisaCard
Value	Description											
00	Domestic Maestro											
01	MasterCard											
02	VisaCard											

### Example

```
<Account no="123456789" type="01"></Account>
```

### AcquirerCountry

The [AcquirerCountry](#) element describes the country of the merchant acquirer or the acquiring bank. This may be needed for European Central Bank reporting purposes.

Description	Base Data Type	Constraints / Permitted Values
Country code of the merchant acquirer or the acquiring bank.	xs:string	Alphanumeric, maximum 3 characters.

## Example

```
<AcquirerCountry>GBR</AcquirerCountry>
```

## Additional\_Amt\_DE54

The [Additional\\_Amt\\_DE54](#) element contains additional amount information about the transaction, if relevant. For example, for purchase with cashback transactions, the additional amounts field displays the cashback amount.

Description	Base Data Type	Constraints / Permitted Values
Additional fees data	xs:string	Alphanumeric, maximum 123 characters.

## Example

```
<Additional_Amt_DE54>0040985D000000020000</Additional_Amt_DE54>
```

## AdjustType

The [AdjustType](#) element shows the type of balance adjustment – either *Actual* (the money was deducted) or *Blocked* (the amount on the card has been blocked).

Description	Base Data Type	Constraints / Permitted Values
Type of balance adjustment	xs:string	Maximum length 6 characters.

## Example

```
<AdjustType>Actual</AdjustType>
```

## AgencyAccount

The [AgencyAccount](#) element describes a card account and the related agency bank account.

Attribute	Description	Data Type	Required	Constraints / Permitted Values
no	Cardholder Account Number	xs:string	Yes	Alphanumeric, maximum 28 characters.
type	Account type	xs:string	Yes	Numeric string, maximum 2 characters Valid values are: 00 = Domestic Maestro; 01 = MasterCard
sortcode	Agency sort code	xs:string		Alphanumeric, maximum 6 characters.
bankacc	Allocated agency bank account	xs:string		Alphanumeric, maximum 8 characters.
name	Cardholder name	xs:string		Alphanumeric, maximum 28 characters.

## Example

```
<AgencyAccount no="123456789" type="01" sortcode="123456" bankacc="12345678" name="John Smith"></AgencyAccount>
```

## Amount

The **Amount** element describes a monetary amount.

Attribute	Description	Data Type	Required	Constraints / Permitted Values
direction	The direction of the cash movement.	<Direction>	Yes	See <a href="#">direction</a> .
value	The monetary amount.	xs:decimal	Yes	Decimal value.
currency	The 3 digit ISO currency code.	xs:unsigned Short	Yes	3 digits

## Example

```
<Amount direction="debit" value="0.95" currency="826"></Amount>
```

## Amt

The **Amt** element describes the net transaction amount of the original transaction, as reported by Mastercard.

Attribute	Description	Data Type	Required	Constraints / Permitted Values
direction	The direction of the cash movement.	<Direction>	Yes	See <a href="#">direction</a> .
value	The net transaction value.	xs:decimal	Yes	Decimal value.
currency	The 3-digit ISO currency code.	xs:unsigned short	Yes	3 digits.

## Example

```
<Amt direction="debit" value="0.95" currency="826"></Amt>
```

## ApprCode

The **ApprCode** element describes the approval or authorisation code from the Issuer. This is the 6 digit number printed on the customer's receipt to indicate a successful payment.

Description	Base Data Type	Constraints / Permitted Values
Approval Code	xs:string	Alphanumeric, maximum 6 characters.

## Example

```
<ApprCode>123456</ApprCode>
```

## ARN

The **ARN** element indicates the Acquirer Reference Number as generated by the acquirer.

Description	Base Data Type	Constraints / Permitted Values
Acquirer Reference Number	xs:string	Alphanumeric, maximum 23 characters.

## Example

```
<ARN>12345678901234567890123</ARN>
```

## Auth\_type

Details on the type of authorisation for distinguishing between normal authorisations and pre-authorisations (or pre-auths).

Description	Base Data Type	Required	Constraints / Permitted Values										
Authorisation type	xs:string	Yes	Alphanumeric string, maximum 1 character. Valid values are: <table border="1" data-bbox="1060 1053 1852 1448"> <thead> <tr> <th>Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>Normal/undefined</td> </tr> <tr> <td>P</td> <td>Preauth where the amount is an estimate.</td> </tr> <tr> <td>F</td> <td>Final authorisation where the amount is correct and for the full amount.</td> </tr> <tr> <td>V</td> <td>Account Verification. This is blank where it is not applicable. It is only applicable for non-authorisation message types.</td> </tr> </tbody> </table>	Value	Description	0	Normal/undefined	P	Preauth where the amount is an estimate.	F	Final authorisation where the amount is correct and for the full amount.	V	Account Verification. This is blank where it is not applicable. It is only applicable for non-authorisation message types.
Value	Description												
0	Normal/undefined												
P	Preauth where the amount is an estimate.												
F	Final authorisation where the amount is correct and for the full amount.												
V	Account Verification. This is blank where it is not applicable. It is only applicable for non-authorisation message types.												

## Example

```
<Auth_type>P</Auth_type>
```

## BasicAmount

The [BasicAmount](#) data type describes a monetary amount loaded or unloaded from a card.

Attribute	Description	Data Type	Required	Constraints / Permitted Values
value	The monetary value.	xs:decimal	Yes	Decimal value (6 decimal places).
value2	The 4-decimal place version of the value. (No)	xs:decimal	Yes	Decimal value (4 decimal places)
currency	The ISO 3-character currency code.	xs:unsigned Short	Yes	3 digits.

## Example

```
<BasicAmount value="0.95"currency="826"></BasicAmount>
```

## BillAmt

The [BillAmt](#) element describes the amount billed. Not that the [BillAmt](#) element does not include interchange.

Attribute	Description	Data Type	Required	Constraints / Permitted Values
value	The value of the billing amount.	xs:decimal	Yes	Decimal value.
currency	The currency of the transaction (3 digit ISO currency code).	xs:unsigned Short	Yes	3 digits.
rate	The conversion rate used to calculate the billing amount value.	<RateAmount>	Yes	Decimal value, maximum 9 decimal places, using conventional rounding down (1-4) and up (5-9).

## Example

The `BillAmt` shown below represents 10 GBP at an exchange rate of 1:1.

```
<BillAmt value="10.00"currency="826"rate="1.00000000"></BillAmt>
```

## BookingType

The `BookingType` element shows the transaction type that triggered the FX conversion, such as an authorisation or presentment.

Code	Description
A	A normal Authorisation has triggered this
C	Credit to cardholder (refund or Payment Out)
E	Auth Expiry Reversal
M	Manual, back office foreign exchange (for future use)
P	Unauthorised Presentment
R	Triggered by an Auth Reversal
Q	Presentment Reversal
S	Surplus, returned funds after a presentment
T	Topup, additional funds required after a presentment
U	Partial Authorisation Reversal
W	Inter-Wallet transfer

## Example

The `BookingType` shown below represents a normal authorisation.

```
<BookingType>A</BookingType>
```

## BookingStatus

The `BookingStatus` element shows the status of the booking.

Code	Description
B	Booked
R	Reversed
X	Retries exceeded
E	Error other than a timeout

## Example

The `BookingStatus` shown below represents a booked transaction.

```
<BookingStatus>B</BookingStatus>
```

## BSA

The `BSA` element describes the Business Service Arrangement (BSA) type code, which is provided by Mastercard. This field can have values of:

1 = Inter-regional

2 = Intra-regional

3 = Inter-country\* (also called subregional)

4 = Intra-country (also called domestic)

8 = Member-to-member (also called bilateral)

Description	Base Data Type	Constraints / Permitted Values
Business Service Arrangement type code.	xs:string	Numeric, maximum 1 character.

## Example

```
<BSA>4</BSA>
```

## Card

The `Card` element describes the key attributes of a payment card.

Attribute	Description	Data Type	Required	Constraints / Permitted Values
PAN	Primary Account Number if PCI DSS Compliant. Alternatively, this number is the Thredd 16-digit public token.	<PAN>	Yes	See PAN.
MaskedPAN	Masked Primary Account Number (PAN) where six of the digits are replaced with the * character.	<PAN>	Required	See MaskedPAN
productID	The Thredd product ID associated with the card.	numeric	No	Numeric, maximum 5 characters.
MVC	Indicates whether or not the token is a Master Virtual Card (MVC)	xs:string	No	Alphanumeric string, maximum 1 character.

## Example

```
<Card PAN="1234567812345678"MaskedPAN="999999*****9995"product="MCRD"MVC="N"programid="GPS"productID=""></Card>
```

## CashAmt

The **CashAmt** element describes the cash amount of the receipt or payment before any bank charges are deducted.

Attribute	Description	Data Type	Required	Constraints / Permitted Values
value	The value of the cash amount.	xs:decimal	Yes	Decimal value.
currency	The currency of the transaction (3 digit ISO currency code).	xs:unsigned Short	Yes	3 digits.

## Example

```
<CashAmt value="10.00" currency="826"></CashAmt>
```

## CashbackAmt

The **CashbackAmt** element describes the cashback amount requested by the cardholder. If no cashback has been requested, then the element is presented with the *value* attribute set at zero and the *currency* attribute value defaulted to the transaction currency.

Attribute	Description	Data Type	Required	Constraints / Permitted Values
value	The transaction value.	xs:decimal	Yes	Decimal value.
currency	The currency of the transaction (3 digit ISO currency code).	xs:unsigned Short	Yes	See 3 digits.

## Example

```
<CashbackAmt value="10.00"currency="826"></CashbackAmt>
```

## CashCode

The **CashCode** element describes transaction type and direction.

Attribute	Description	Data Type	Required	Constraints / Permitted Values								
direction	The direction of the transaction.	<Direction>	Yes	See <b>direction</b> .								
CashType	The type of transaction.	xs:string	Yes	Accepts one of the following values: <table border="1" data-bbox="1255 2389 1852 2665"> <thead> <tr> <th>CashType</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>bac</td> <td>BACS</td> </tr> <tr> <td>CHAPS</td> <td>CHAPS</td> </tr> <tr> <td>fpv</td> <td>Faster Payment (Receipt or payment)</td> </tr> </tbody> </table>	CashType	Description	bac	BACS	CHAPS	CHAPS	fpv	Faster Payment (Receipt or payment)
CashType	Description											
bac	BACS											
CHAPS	CHAPS											
fpv	Faster Payment (Receipt or payment)											

Attribute	Description	Data Type	Required	Constraints / Permitted Values																										
				<table border="1"> <thead> <tr> <th>CashType</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>ddp</td> <td>Direct Debit Payment setup, authorisation and initiation</td> </tr> <tr> <td>cbt</td> <td>Cardholder initiated balance transfer between own accounts</td> </tr> <tr> <td>ipp</td> <td>Inter program payment between two customers within same agency sort code</td> </tr> <tr> <td>p2p</td> <td>Peer-to-peer payment between two cardholders</td> </tr> <tr> <td>FasterPaymentReject</td> <td>Faster Payment which is rejected by the Card Scheme. (In this case, an inbound payment will be created to move money from the customer's account to holding account.)</td> </tr> <tr> <td>ModulrReturn</td> <td>An outbound return received from Modulr which is processed as inbound payment.</td> </tr> <tr> <td>SEPAIn</td> <td>Inbound SEPA (Single European Payment Area) payment</td> </tr> <tr> <td>SEPAOut</td> <td>Outbound SEPA payment</td> </tr> <tr> <td>SEPAPaymentReturn</td> <td>SEPA payment which is rejected by the Card Scheme.</td> </tr> <tr> <td>DirectDebitOut Notification</td> <td>Direct Debit payment notification, indicating that a direct debit transaction has been initiated.</td> </tr> <tr> <td>DirectDebitOut Payout</td> <td>Direct debit payout, indicating that the actual transfer of funds to the payee's account has occurred.</td> </tr> <tr> <td></td> <td>Space or an empty value</td> </tr> </tbody> </table>	CashType	Description	ddp	Direct Debit Payment setup, authorisation and initiation	cbt	Cardholder initiated balance transfer between own accounts	ipp	Inter program payment between two customers within same agency sort code	p2p	Peer-to-peer payment between two cardholders	FasterPaymentReject	Faster Payment which is rejected by the Card Scheme. (In this case, an inbound payment will be created to move money from the customer's account to holding account.)	ModulrReturn	An outbound return received from Modulr which is processed as inbound payment.	SEPAIn	Inbound SEPA (Single European Payment Area) payment	SEPAOut	Outbound SEPA payment	SEPAPaymentReturn	SEPA payment which is rejected by the Card Scheme.	DirectDebitOut Notification	Direct Debit payment notification, indicating that a direct debit transaction has been initiated.	DirectDebitOut Payout	Direct debit payout, indicating that the actual transfer of funds to the payee's account has occurred.		Space or an empty value
CashType	Description																													
ddp	Direct Debit Payment setup, authorisation and initiation																													
cbt	Cardholder initiated balance transfer between own accounts																													
ipp	Inter program payment between two customers within same agency sort code																													
p2p	Peer-to-peer payment between two cardholders																													
FasterPaymentReject	Faster Payment which is rejected by the Card Scheme. (In this case, an inbound payment will be created to move money from the customer's account to holding account.)																													
ModulrReturn	An outbound return received from Modulr which is processed as inbound payment.																													
SEPAIn	Inbound SEPA (Single European Payment Area) payment																													
SEPAOut	Outbound SEPA payment																													
SEPAPaymentReturn	SEPA payment which is rejected by the Card Scheme.																													
DirectDebitOut Notification	Direct Debit payment notification, indicating that a direct debit transaction has been initiated.																													
DirectDebitOut Payout	Direct debit payout, indicating that the actual transfer of funds to the payee's account has occurred.																													
	Space or an empty value																													
CashGroup	The summary group type of the transaction.	xs:string	Yes	<p>Takes one of the following values:</p> <table border="1"> <thead> <tr> <th>CashType</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>rcp</td> <td>Receipt</td> </tr> <tr> <td>pay</td> <td>Payment</td> </tr> </tbody> </table>	CashType	Description	rcp	Receipt	pay	Payment																				
CashType	Description																													
rcp	Receipt																													
pay	Payment																													

## Example

```
<CashCode direction="debit" CashType="fpy" CashGroup="pay"></CashCode>
```

## CCAAmount (Mastercard only)

The **CCAAmount** element describes the Currency Conversion Assessment (CCA) amount as calculated by the network (Mastercard only). The **currency** attribute value defaults to the CardFinancial (Presentment) billing currency.

Attribute	Description	Data Type	Required	Constraints / Permitted Values
value	The Currency Conversion Assessment value.	xs:decimal	Yes	Decimal value.
currency	The Currency transaction described in ISO Standard Currency code.	xs:unsigned Short	Yes	3 digits.
included	Clarifies whether the CCA amount has been included in the FX fee, which is a product-level configuration option.	<YesNoString>	Yes	Valid values are: • yes • no

## Example

```
<CCAAmount value="0.01" currency="826" included="no"></CCAAmount>
```

## ChargebackRefNum

The **ChargebackRefNum** element holds the chargeback CycleID value and is shown as *Chargeback Ref Num* in Smart Client.

Description	Base Data Type	Constraints / Permitted Values
Unique for a Chargeback record. Normally 10 characters long.	xs:string	Numeric. Maximum 50 characters.

## Example

```
<ChargebackRefNum>9034102149</ChargebackRefNum>
```

## Classification

The **Classification** element describes the Merchant Category Code (MCC), which is used to classify the type of business service provided by the merchant.

Attribute	Description	Data Type	Required	Constraints / Permitted Values
MCC	Merchant Category Code	<MCC>	Yes	See MCC.

## Example

```
<Classification MCC="5659"></Classification>
```

## CommissionAmt

The **CommissionAmt** element describes the value of the commission applied to a Card Authorisation only. The *commission* is the fees that Thredd applies to the card, based on the Fee configuration for the card (combination of the rate fee and fixed fee). For more information, see the *Thredd Fees Guide*.

Attribute	Description	Data Type	Required	Constraints / Permitted Values
value	The value of the commission amount.	xs:decimal	Yes	Decimal value.
currency	The three-digit ISO currency code.	xs:unsigned Short	Yes	3 digits.

## Example

```
<CommissionAmt value="0.95"currency="826"></CommissionAmt>
```

## CycleNumber

The [CycleNumber](#) element describes the Mastercard clearing cycle number and applies to a card financial transaction only.

**Note:** The CycleNumber is not applicable to Visa transactions, as Visa do not have the concept of settlement or reconciliation cycles.

Permitted Value	Description	Data Type
01	Cycle number 01	xs:string
02	Cycle number 02	xs:string
03	Cycle number 03	xs:string
04	Cycle number 04	xs:string
05	Cycle number 05	xs:string
06	Cycle number 06	xs:string

## Example

```
<CycleNumber>03</CycleNumber>
```

## DeclineReason

The [DeclineReason](#) element describes the reason a receipt was rejected and returned to source, or a payment request was declined and not processed.

Description	Data Type	Constraints / Permitted Values														
The reason a receipt or payment was declined.	xs:string	Maximum length two characters: <table border="1" data-bbox="1171 2220 1850 2644"> <thead> <tr> <th>Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>00</td> <td>Not specified</td> </tr> <tr> <td>01</td> <td>Insufficient funds</td> </tr> <tr> <td>02</td> <td>Maximum number of transactions exceeded</td> </tr> <tr> <td>03</td> <td>Transaction exceeds maximum permitted value</td> </tr> <tr> <td>04</td> <td>Maximum account balance exceeded</td> </tr> <tr> <td>05</td> <td>Black listed destination</td> </tr> </tbody> </table>	Value	Description	00	Not specified	01	Insufficient funds	02	Maximum number of transactions exceeded	03	Transaction exceeds maximum permitted value	04	Maximum account balance exceeded	05	Black listed destination
Value	Description															
00	Not specified															
01	Insufficient funds															
02	Maximum number of transactions exceeded															
03	Transaction exceeds maximum permitted value															
04	Maximum account balance exceeded															
05	Black listed destination															

Description	Data Type	Constraints / Permitted Values										
		<table border="1"> <thead> <tr> <th>Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>06</td> <td>Not a valid account</td> </tr> <tr> <td>07</td> <td>Account closed</td> </tr> <tr> <td>08</td> <td>Cardholder deceased</td> </tr> <tr> <td>09</td> <td>No valid Direct Debit instruction</td> </tr> </tbody> </table>	Value	Description	06	Not a valid account	07	Account closed	08	Cardholder deceased	09	No valid Direct Debit instruction
Value	Description											
06	Not a valid account											
07	Account closed											
08	Cardholder deceased											
09	No valid Direct Debit instruction											

## Example

```
<DeclineReason>01</DeclineReason>
```

## Desc

The [Desc](#) element provides descriptive text to provide a comment on a transaction. You can supply this value when initiating a card load or unload via web services. Alternatively, Thredd provides the description when the load occurs as a result of a balance transfer between primary and secondary cards.

**Note:** For Agency banking transactions, this element can be empty.

Description	Base Data Type	Constraints / Permitted Values
Descriptive text or reference	xs:string	Maximum length 500 characters.

## Example

```
<Desc>Some Descriptive Text</Desc>
```

## Destination

The [Destination](#) element provides details of the destination wallet account to which funds are transferred in a Multi-FX wallet transaction.

Attribute	Description	Data Type	Required	Constraints / Permitted Values
walletid	ID of the destination wallet account.	bigint	Yes	0 to 2 <sup>64</sup>
balancechange	Change in destination wallet account balance amount.	decimal (19,4)	Yes	Precision = 19 digits, scale = 4 digits.
blockchange	Change in destination wallet account blocked amount.	decimal (19,4)	Yes	Precision = 19 digits, scale = 4 digits.
newbalance	New destination wallet account balance.	decimal (19,4)	Yes	Precision = 19 digits, scale = 4 digits.
newblock	New destination wallet account blocked amount.	decimal (19,4)	Yes	Precision = 19 digits, scale = 4 digits.

## Example

```
<Destination walletid="1253" balancechange="15.5000" blockchange="5.5000" newbalance="10.0000" newblock="20.0000" />
```

## External

The [External](#) element describes the other bank account in a payment transfer transaction.

Attribute	Description	Data Type	Constraints / Permitted Values
sortcode	Source or destination sort code.	xs:string	Numeric 6 characters.
bankacc	Source or destination bank account.	xs:string	Numeric 8 characters.
name	Sender or recipient's name.	xs:string	Alphanumeric, maximum 28 characters.

## Example

```
<External sortcode="123456" bankacc="12345678" name="John Bloggs"></External>
```

## Event

The [Event](#) element describes an event that has changed a card's status.

Attribute	Description	Data Type	Required	Constraints / Permitted Values
Type	The type of event.	xs:string	Yes	Valid values are: <ul style="list-style-type: none"> <li>Upgraded</li> <li>Renewed</li> <li>Lost</li> <li>Stolen</li> <li>Cancelled</li> <li>PINTriesExceeded</li> <li>Voided</li> <li>Expired,</li> <li>Activation</li> <li>UnBlocked</li> <li>StatusChange</li> <li>ReportedToSAFE</li> </ul>
Source	The item source ( <a href="#">ItemSrc</a> ) of a card activation. Only applies to card activations.	xs:unsignedbyte	If applicable	See <a href="#">ItemSrc</a> in the <i>Web Services Guide</i> . Defaults to 0.
ActivationDate	The Date of activation. Only applies to card activations.	xs:string	If applicable	
ConvertedDate	The date of conversion from a virtual to a physical card.	xs:string	If applicable	
StatCode	Status code of the card after the event.	xs:string	Yes	See <i>Status Codes</i> in the <i>Web Services Guide</i> .

Attribute	Description	Data Type	Required	Constraints / Permitted Values
OldStatCode	Status code of the card before the event.	xs:string	Yes	See <i>Status Codes</i> in the <i>Web Services Guide</i> .
Date	Date and time of the event (UK daylight savings time).	xs:string	Yes	Format: YYYYMMDDHHMMSS
transactionid	The unique transaction ID for a <i>ReportedToSafe</i> event. This event can be used to track Mastercard SAFE reporting transactions.	xs:string	If applicable	Numeric. Only applicable if the event <i>Type</i> is <i>ReportedToSAFE</i> .

## Example - StatusChange

```
<Event Type="StatusChange" Source="0" StatCode="62" OldStatCode="00" Date="20210307153523" transactionid="" ></Event>
```

## Example - ReportedToSafe

```
<Event Type="ReportedToSAFE" Source="0" StatCode="" OldStatCode="" Date="20210307153523" transactionid="1234567890" ></Event>
```

## Fee

The [Fee](#) element describes a fee amount.

Attribute	Description	Data Type	Required	Constraints / Permitted Values
direction	The direction of the fee.	<Direction>	Yes	See <a href="#">direction</a> .
value	The value of the fee amount(PDS0147).	xs:decimal	Yes	Decimal value.
currency	The 3 digit ISO standard currency code.	xs:unsigned short	Yes	3 digits.
value2	The value of the fee amount(PDS0146). Only for Mastercard records.	xs:decimal	No	Decimal value.

## Example

```
<Fee direction="debit" value="3.330000" currency="826" value2="3.3300" ></Fee>
```

## FeeAmt

The [FeeAmt](#) element describes the fee amount as received from Mastercard.

Attribute	Description	Data Type	Required	Constraints / Permitted Values
direction	The direction of the fee.	<Direction>	Yes	See <a href="#">direction</a> .
value	The value of the fee. For Programme Manager fees, this is the sum total of any rate fee, fixed fee or other fee applied to the transaction (see <a href="#">Rate_Fee</a> and <a href="#">Fixed_Fee</a> in the <a href="#">CardAuthorisation</a> record). For Scheme fees, it is the fee amount as received from the Scheme.	xs:decimal	Yes	Decimal value.

Attribute	Description	Data Type	Required	Constraints / Permitted Values
currency	The 3-digit ISO standard currency code.	xs:unsigned short	Yes	3 digits.

## Example

```
<FeeAmt direction="debit" value="0.95" currency="826"></FeeAmt>
```

## FeeClass

The [FeeClass](#) element describes the nature of a fee.

Attribute	Description	Data Type	Required	Constraints / Permitted Values															
interchangeTransaction	Valid values are <i>yes</i> and <i>no</i> Note: The value is yes when the FeeClass type is 4 or 5	<YesNoString>	Yes	Valid values are: • yes • no															
type	Describes the type of the fee.	xs:string	Yes	Valid values are: <table border="1"> <thead> <tr> <th>Value</th> <th>Description</th> <th>Fee Type</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>Cardholder fee: In this case the account number in the fee message refers to the cardholder's account.</td> <td>Cardholder Fee</td> </tr> <tr> <td>2</td> <td>MasterCard funds transfer settlement fee</td> <td>Settlement Fee</td> </tr> <tr> <td>4</td> <td>MasterCard interchange received fee</td> <td>Settlement Fee</td> </tr> <tr> <td>5</td> <td>MasterCard interchange fee to be paid</td> <td>Settlement Fee</td> </tr> </tbody> </table> <p>For a CardFinancial, <a href="#">FeeClass</a> element record, the <a href="#">type</a> attribute always has a value of 1.</p>	Value	Description	Fee Type	1	Cardholder fee: In this case the account number in the fee message refers to the cardholder's account.	Cardholder Fee	2	MasterCard funds transfer settlement fee	Settlement Fee	4	MasterCard interchange received fee	Settlement Fee	5	MasterCard interchange fee to be paid	Settlement Fee
Value	Description	Fee Type																	
1	Cardholder fee: In this case the account number in the fee message refers to the cardholder's account.	Cardholder Fee																	
2	MasterCard funds transfer settlement fee	Settlement Fee																	
4	MasterCard interchange received fee	Settlement Fee																	
5	MasterCard interchange fee to be paid	Settlement Fee																	
code	Specifies the type of cardholder fee.	xs:string	Yes	The value specified below depends upon the message code (fee identifier), see <a href="#">Fee Class Element Code Attribute Values</a> Where the <a href="#">FeeClass type</a> attribute is 0,2,4 or 5, then the <a href="#">code</a> attribute is 0. For a card Financial, <a href="#">FeeClass</a> element record, the <a href="#">code</a> attribute always has a value of 1.															
memberID	Specifies the ICA	xs:string	No	Only applicable to <a href="#">MastercardFee</a> .															

## Example

```
<FeeClass interchangeTransaction="no" type="1" code="1"></FeeClass>
```

## FIID

The [FIID](#) element describes the Forwarding Institution Identification Code (FIID).

Description	Base Data Type	Constraints / Permitted Values
A code identifying the forwarding institution	xs:string	Alphanumeric, maximum 11 characters.

## Example

```
<FIID>0123456</FIID>
```

## File

The **File** element describes the file in which the receipt was notified or the outbound payment was submitted for processing. This element is used for outbound file-based processing with Agency banking.

Attribute	Description	Data Type	Required	Constraints / Permitted Values
filedate	Date and time of file containing receipt or date the payment file is generated.	xs:string	Yes	Maximum 14 characters, date and time in the format: YYYYMMDDHHMMSS
filename	Name of file containing receipt or payment.	xs:string	Yes	Alphanumeric, maximum 100 characters.

## Example

```
<File filedate="20100824155111" filename="ABC123xyz"></File>
```

## FunctionCode

The **FunctionCode** element is used by Mastercard to describe the transaction functions the clearing system performs.

Permitted Value	Description	Data Type
400	Denotes 'Full'. Used for Mastercom Chargebacks.	integer
451	Denotes 'Partial'. Used for Mastercom Chargebacks.	integer
603	Retrieval Request.	integer
605	Retrieval Request Acknowledgement.	integer
685	Financial Position Detail (Chargeback -Mastercom).	integer
700	Fee Collection (Member-generated) / For Mastercom pre-arbitration or arbitration case filing.	integer
780	Fee Collection Return (Member-generated).	integer
781	Fee Collection Resubmission (Member-generated).	integer
782	Fee Collection Arbitration Return (Member-generated).	integer
783	Fee Collection (Clearing System-generated).	integer
790	Fee Collection (Funds Transfer) – applies only in the IPM Pre-edit system to UK Domestic Maestro transactions.	integer

## LoadSource

The [LoadSource](#) element describes the source of the Card Load or Unload.

Attribute	Description	Data Type	Constraints / Permitted Values
Source	The source of the Load / Unload request.	xs:string	Maximum length 3 characters. For more information, see <a href="#">Load Sources</a> .
Type	The type of the Load/Unload request. Payment method of funds for the load.	xs:string	0 = Unknown 1 = Cash 2 = Debit card 3 = Credit card 4 = e-Wallet 5 = Bank account
FixedFee	The amount of any Fixed Fee that was applied.	xs:decimal	
Rate_Fee	The amount of any Rate Fee that was applied.	xs:decimal	

## Example

```
<LoadSource source="9"Type="1"FixedFee="0.00"Rate_Fee="0.00"/></LoadSource
```

## LoadType

The [LoadType](#) element describes the type of funds used in a Card Load or Unload transaction.

Description	Data Type	Constraints / Permitted Values																										
The type of fund used in the Card Load or Unload.	xs:string	Maximum length 2 characters. <table border="1" data-bbox="1081 1745 1850 2525"> <thead> <tr> <th>Value</th> <th>Description</th> </tr> </thead> <tbody> <tr><td>0</td><td>Not Specified</td></tr> <tr><td>1</td><td>Cash</td></tr> <tr><td>2</td><td>Debit card</td></tr> <tr><td>3</td><td>Credit Card</td></tr> <tr><td>4</td><td>Import</td></tr> <tr><td>5</td><td>Savings Stamps</td></tr> <tr><td>6</td><td>Cheque</td></tr> <tr><td>7</td><td>Standing Order</td></tr> <tr><td>8</td><td>Export</td></tr> <tr><td>9</td><td>Transfer</td></tr> <tr><td>10</td><td>Funding Card</td></tr> <tr><td>11</td><td>From/To Offline Balance</td></tr> </tbody> </table>	Value	Description	0	Not Specified	1	Cash	2	Debit card	3	Credit Card	4	Import	5	Savings Stamps	6	Cheque	7	Standing Order	8	Export	9	Transfer	10	Funding Card	11	From/To Offline Balance
Value	Description																											
0	Not Specified																											
1	Cash																											
2	Debit card																											
3	Credit Card																											
4	Import																											
5	Savings Stamps																											
6	Cheque																											
7	Standing Order																											
8	Export																											
9	Transfer																											
10	Funding Card																											
11	From/To Offline Balance																											

## Example

```
<LoadType>6</LoadType>
```

## LocalDate

The [LocalDate](#) element describes the date and time of the transaction in the local timezone.

Description	BaseType	Constraints / Permitted Values
Date and time.	xs:string	Maximum 14 characters, date and time in the format: YYYYMMDDHHMMSS

## Example

The example below shows a date/time of 2:20.33pm on 25th Jan 2025.

```
<LocalDate>20250125142033</LocalDate>
```

## LocalDateUTC

The transaction date and Time in UTC as received from Mastercard, Visa, and MNE for the matching authorisation. In CardFinancial, this includes the matching authorisation of a financial advice or reversal. In CardAuthorisation, this includes the matching authorisation of an auth advice or reversal.

[LocalDateUTC](#) takes values from transmission\_DateTime\_07(DE007) of its matching authorisation.

Description	BaseType	Constraints / Permitted Values
The transaction date and Time in UTC as received from Mastercard, Visa, and MNE.	xs:string	Maximum 10 characters, date and time in the format: MMDDHHMMSS

## Example

An authorisation reversal with the AuthId of 3000000057994 taking place on 23rd January 2025 at 04:11. with the matching authorisation of 3000000049064528 occurring on the 23rd January 2025 at 04:10..

```
<LocalDate>20250123041102</LocalDate>
<LocalDateUTC>0123041019</LocalDateUTC>
```

A financial advice with a FinId of 3000000006201596 taking place on 11th of January 2025 at 00:00 with a matching authorisation of 3000000006139981 occurring on the 10th of January 2025 at 23:59.

```
<LocalDate>20250111000000</LocalDate>
<LocalDateUTC>0110235901</LocalDateUTC>
```

## MastercardFeeClass

The [MastercardFeeClass](#) data type describes the type of Mastercard fee.

Attribute	Description	Data Type	Required	Constraints / Permitted Values
interchangeTransaction	Valid values are <i>yes</i> and <i>no</i> Note: The value is yes when the FeeClass type is 4 or 5	<YesNoString>	Yes	Valid values are: • yes • no
type	Describes the type of the fee.	xs:string	Yes	Valid values are:

Attribute	Description	Data Type	Required	Constraints / Permitted Values															
				<table border="1"> <thead> <tr> <th>Value</th> <th>Description</th> <th>Fee Type</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>Network fee: These are fees generated by Thredd or MasterCard clearing. In this case the account number in the fee message refers to the fee account for Thredd.</td> <td>Settlement Fee</td> </tr> <tr> <td>2</td> <td>MasterCard funds transfer settlement fee</td> <td>Settlement Fee</td> </tr> <tr> <td>4</td> <td>MasterCard interchange received fee</td> <td>Settlement Fee</td> </tr> <tr> <td>5</td> <td>MasterCard interchange fee to be paid</td> <td>Settlement Fee</td> </tr> </tbody> </table>	Value	Description	Fee Type	0	Network fee: These are fees generated by Thredd or MasterCard clearing. In this case the account number in the fee message refers to the fee account for Thredd.	Settlement Fee	2	MasterCard funds transfer settlement fee	Settlement Fee	4	MasterCard interchange received fee	Settlement Fee	5	MasterCard interchange fee to be paid	Settlement Fee
Value	Description	Fee Type																	
0	Network fee: These are fees generated by Thredd or MasterCard clearing. In this case the account number in the fee message refers to the fee account for Thredd.	Settlement Fee																	
2	MasterCard funds transfer settlement fee	Settlement Fee																	
4	MasterCard interchange received fee	Settlement Fee																	
5	MasterCard interchange fee to be paid	Settlement Fee																	
code	Specifies the type of cardholder fee.	xs:string	Yes	0															
memberid	Specifies the Mastercard Member ID ( i.e. ICA)	xs:string	Yes	Maximum 6 characters. <b>Note:</b> This element is only present when the container element of FeeClass is "MastercardFee".															

## Example

```
<MastercardFeeClass interchangeTransaction="no" type="0" code="0" memberid="012345"></MastercardFeeClass>
```

## MerchCode

The [MerchCode](#) element is the Card Acceptor Merchant Identifier supplied by the acquirer. This a unique number that is used to identify the merchant or originator of the transaction.

Expected Value	BaseType	Constraints / Permitted Values
Merchant Code / Card Acceptor Identifier.	xs:string	Alphanumeric, maximum 15 characters.

## Example

```
<MerchCode>ABCD12345678</MerchCode>
```

## MsgSource

The [MsgSource](#) element describes the source from which the message is derived.

Attribute	Description	Data Type	Required	Constraints / Permitted Values																
value	The source from which this message is derived.	xs:decimal	Yes	Maximum length two; must be one of the following values: <table border="1" data-bbox="1297 557 1852 1240"> <thead> <tr> <th>Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>12</td> <td>Outgoing fees to Visa.</td> </tr> <tr> <td>17</td> <td>Outgoing fees to Mastercard. This must be applied to all outgoing settlement fees.</td> </tr> <tr> <td>62</td> <td>This value is applicable on CardAuthorisation records only.</td> </tr> <tr> <td>66</td> <td>ECCEDD or GCMS using the ECCF file format (Mastercard International).</td> </tr> <tr> <td>67</td> <td>GCMS using IPM file format (Mastercard International).</td> </tr> <tr> <td>74</td> <td>UK Domestic Maestro using the IPM file format.</td> </tr> <tr> <td>54</td> <td>Visa International.</td> </tr> </tbody> </table>	Value	Description	12	Outgoing fees to Visa.	17	Outgoing fees to Mastercard. This must be applied to all outgoing settlement fees.	62	This value is applicable on CardAuthorisation records only.	66	ECCEDD or GCMS using the ECCF file format (Mastercard International).	67	GCMS using IPM file format (Mastercard International).	74	UK Domestic Maestro using the IPM file format.	54	Visa International.
Value	Description																			
12	Outgoing fees to Visa.																			
17	Outgoing fees to Mastercard. This must be applied to all outgoing settlement fees.																			
62	This value is applicable on CardAuthorisation records only.																			
66	ECCEDD or GCMS using the ECCF file format (Mastercard International).																			
67	GCMS using IPM file format (Mastercard International).																			
74	UK Domestic Maestro using the IPM file format.																			
54	Visa International.																			
domesticMaestro	Indicates Domestic Maestro.	<domesticMaestro>	Yes	See <a href="#">domesticMaestro</a> .																

## Example

```
<MsgSource value="67"domesticMaestro="no"></MsgSource>
```

## OperationType

The [OperationType](#) sub-element describes the type of wallet transaction.

ID	Name	Description
1	Authorisation	Authorisation transaction (Point of Sale, e-commerce or ATM).
2	Financial	Financial transaction type (e.g., presentment).
3	Fees	All kinds of non-transaction based fees, such as recurring fees and card usage fees.
4	Loads	Funds loaded to the wallet account using a Thredd web service.
5	Unloads	Funds unloaded from the wallet account using a Thredd web service.
6	Wallet Transfer	Funds transferred between wallet accounts.
7	Balance Recalculation	Balance recalculation. Certain operations will cause the balance to be recalculated without otherwise affecting the balance.
8	Closure Requested	Request to close the wallet account.
9	Closure Complete	The wallet account is closed after all pending authorisations have been dealt with.

ID	Name	Description
10	Wallet Opening	Used to record the (re-)opening of a wallet account.
11	Authorisation Expiry	Indicates either a forced or automatic authorisation expiry.

## Example

```
<OperationType>1</OperationType>
```

## OrigTxnAmt

This `OrigTxnAmt` element describes the original transaction amount requested by the cardholder.

Attribute	Description	Data Type	Required	Constraints / Permitted Values
value	The value of the original transaction.	xs:decimal	Yes	Decimal value.
currency	The currency code of the original transaction.	xs:unsignedShort	Yes	3 digits.
partial	Indicates a partial amount.	<YesNoString>	If applicable	Valid values are: <ul style="list-style-type: none"> <li>• yes</li> <li>• no</li> </ul> If not supplied, assumes "no".
origItemid	The system trace audit number of the original authorisation, as assigned by the message originator. This can be used to link an authorisation reversal to the original authorisation.	xs:unsignedInt	If applicable	0 to 4,294,967,295

## Example

```
<OrigTxnAmt value="0.95" currency="826" partial="yes" origItemid="123456"></OrigTxnAmt>
```

## Other

The `Other` element describes the Non-wallet amount and currency (e.g., for loads and unloads)..

Attribute	Description	Data Type	Required	Constraints / Permitted Values
value	The value of the amount.	decimal (19,8)	Yes	Decimal value: Precision = 19 digits, scale = 8 digits.
currency	The 3 digit ISO standard currency code.	xs:unsignedShort	Yes	Currency in ISO 3-digit number format.

## Example

```
<Other amount="15.5000" currency="AUD"/>
```

## PaddingAmt

The [PaddingAmt](#) element describes the value of any padding amount applied to an authorisation. This is typically used to mitigate against FX rate fluctuations between the authorisation and the settlement.

Attribute	Description	Data Type	Required	Constraints / Permitted Values
value	The value of the padding amount.	xs:decimal	Yes	Decimal value.
currency	The 3 digit ISO standard currency code.	xs:unsignedShort	Yes	Short value.

## Example

```
<PaddingAmt value="0.95"currency="826"></PaddingAmt>
```

## PaymentToken

The [PaymentToken](#) element is populated from payment token data when a payment token was used for the transaction. If no payment token was used, then the [PaymentToken](#) element is omitted.

Attribute	Description	Data Type	Required	Constraints / Permitted Values
id	Unique Thredd ID of the payment token. Only present if transaction relates to a payment token (for example, Apple Pay).	xs:string	Yes	
creator	Identifies which system created the payment token. Only present if the transaction relates to a payment token (for example, Apple Pay).	xs:string	Yes	MDES or VDEP
expdate	Expiry date of the payment token. Only present if the transaction relates to a payment token (for example, Apple Pay).	xs:string	Yes	Format YYYY-MM-DD
type	The type of system the payment token is encoded onto (defines how the payment token PAN is held). Only present if the transaction relates to a payment token (for example, Apple Pay).	xs:string	Yes	See type.
status	Current status of the payment token as set by Thredd. Only present if transaction relates to a payment token (for example, Apple Pay). Please note this can differ from the status of the PAN.	xs:string	Yes	00 = authorised.
creatorstatus	Current status of the payment token as set by the creator of the payment token. Only present if the transaction relates to a payment token (for example, Apple Pay).	xs:string	Yes	See creatorstatus .
wallet	Wallet that the payment token belongs to. Only present if the transaction relates to a payment	xs:string	Yes	See wallet.

Attribute	Description	Data Type	Required	Constraints / Permitted Values
	token (for example, Apple Pay).			
devicetype	Indicates the type of the device in which the payment token is held. Only present if the transaction relates to a payment token (for example, Apple Pay).	xs:string	Yes	See <a href="#">devicetype</a> .
lang	The ISO 639-1 2 character alpha language code reported by the payment token device at digitisation time. Only present if the transaction relates to a payment token (for example, Apple Pay). For a list of ISO 639-1 language codes, see <a href="http://www.iso.org">http://www.iso.org</a>  <b>Note:</b> The code may not be known, in which case the field will be empty.	xs:string	Yes	
activationexpiry	The Date and Time in UTC (GMT) when the activation code in the field PaymentToken activationCode expires. Only present if the first two characters of ProcCode="34" (payment token activation notification).  <b>Note:</b> Milliseconds are present, but will always be zero. For Mastercard, seconds will always be zero.	xs:string	Yes	
activationmethod	The method by which the cardholder should obtain the Activation Code (in the field PaymentToken_activationCode) They must enter the activation code into the device holding the payment token in order to activate it. Only present if first two characters of ProcCode="34" (payment token activation notification).	xs:string	Yes	See <a href="#">activationmethod</a>

## Example

```
<PaymentToken id="26025313" creator="MC-MDES" expdate="2024-04-30" type="SE" status="00" creatorstatus="A" wallet="APPLE" device-type="M" lang="" activationexpiry="2021-03-02 11:52:00" activationmethod="1" />
```

## Pending\_Billing\_Amount

The [Pending\\_Billing\\_Amount](#) element shows the value of the pending Chargeback amount.

Description	Data Type	Constraints / Permitted Values
Chargeback amount.	xs:decimal	Decimal value.

## Example

```
<Pending_Billing_Amount>10.25</Pending_Billing_Amount>
```

## Recon

The **Recon** element provides details of the reconciliation date and clearing cycle.

Attribute	Description	Data Type	Required	Constraints / Permitted Values
date	Date the original transaction was reconciled.	xs:string	No	Maximum 8 characters. Date in the format: YYYYMMDD
cycle	Indicates which of the Mastercard clearing cycles the transaction was processed in.	xs:string	No	Values 01 - 06.

## Example

An example of a settlement which occurred in cycle 1 on 11th September 2021 is shown below.

```
<Recon date="20210911" cycle="01"/></recon>
```

## Receiver

The **Receiver** element provides details of the receiver of the payment where there is a money transfer. See also **Sender**.

Attribute	Description	Data Type	Required	Constraints / Permitted Values												
firstname	FirstName	xs:string	No	Alphanumeric, maximum 99 characters.												
middlename	Middle Name	xs:string	No	Alphanumeric, maximum 99 characters.												
lastname	Last Name	xs:string	No	Alphanumeric, maximum 99 characters.												
streetaddress	Street Address	xs:string	No	Alphanumeric, maximum 99 characters.												
city	City	xs:string	No	Alphanumeric, maximum 99 characters.												
provincecode	Province code	xs:string	No	Alphanumeric, maximum 99 characters.												
country	Country	xs:string	No	Normally 3-character alpha ISO code												
postcode	Postcode	xs:string	No	Alphanumeric, maximum 99 characters.												
dateofbirth	Date of birth	xs:string	No	Format: MMDDYYYY												
accountnumber	Account Number	xs:string	No	Alphanumeric, maximum 99 characters.												
idtype	Id type	xs:string	No	<table border="1"> <thead> <tr> <th>Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>00</td> <td>Passport</td> </tr> <tr> <td>01</td> <td>National Identification Card</td> </tr> <tr> <td>02</td> <td>Driver's License</td> </tr> <tr> <td>03</td> <td>Government Issued</td> </tr> <tr> <td>04</td> <td>Other</td> </tr> </tbody> </table>	Value	Description	00	Passport	01	National Identification Card	02	Driver's License	03	Government Issued	04	Other
Value	Description															
00	Passport															
01	National Identification Card															
02	Driver's License															
03	Government Issued															
04	Other

05	Debit/deposit access accounts other than those linked to a Visa card (includes checking/savings accounts and proprietary debit/ATM cards)																							
06	Credit accounts other than those linked to a Visa card (includes credit cards and proprietary credit lines)																							
claimcode	Claim Code	xs:string	No	Alphanumeric, maximum 99 characters.																				

## Example

```
<Receiver firstname="FRST" middlename="M" lastname="LST NME"
streetaddress="RM R STREET S STREETI" city="MAIN" provincecode="MD" country="MDA"
postcode="00000" dateofbirth="07051999" accountnumber="4779300008363000" idtype="04"
idnbr="2014011000399" idctrycode="MDA" nationality="MDA"
phonenumbr="2811131" idexpdate="102020" acctnbrtype="08"
birthctry="MDA" fundssource="04" claimcode="TST"></Receiver>
```

## ReconciliationDate

The [ReconciliationDate](#) element shows the reconciliation date of a Chargeback record.

Description	Data Type	Constraints / Per
Reconciliation date of Chargeback record.	xs:string	Maximum 8 characters, Date in the format: YYYYMMDD

## Example

```
<ReconciliationDate>20200325</ReconciliationDate>
```

## ReconciliationCycle

The [ReconciliationCycle](#) element shows the reconciliation cycle of the Chargeback record.

Description	Data Type	Constraints / Permitted Values
Reconciliation cycle of Chargeback record.	xs:string	Maximum 2 characters, Possible values are 01,02,03,04,05 and 06.

## Example

```
<ReconciliationCycle>03</ReconciliationCycle>
```

## RecordType

The [RecordType](#) element is used to distinguish between different fee types. (Relevant to Mastercard only)

Description	Base Data Type	Constraints / Permitted Values										
<p>This can have different values depending on the primary element. For example:</p> <p>For a chargeback, where the value of RecordType is <i>MCB</i>.</p> <p>To find out the chargeback fee amount, refer to the fee amount (<a href="#">FeeAmt</a>) of the <a href="#">MasterCardFee</a> record.</p> <p>To view the original chargeback amount, refer to the <a href="#">BillAmt</a> in the <a href="#">CardChrgBackRepRes</a> record.</p> <p>For case filing where the value of RecordType is <i>MCF</i>, refer to the <a href="#">MasterCardFee</a> record for details of pre-arbitration and arbitration case filing fees.</p>	xs:string	<p>Maximum length 3.</p> <table border="1"> <thead> <tr> <th>Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>FC</td> <td>From FeeCollection.</td> </tr> <tr> <td>MCB</td> <td>Mastercom Chargebacks. Raised either via Mastercom UI or Mastercom SmartClient API.</td> </tr> <tr> <td>MCF</td> <td>Mastercom pre-arbitration or arbitration case filing. Raised either via Mastercom UI or Mastercom Smartclient API.</td> </tr> <tr> <td>VFC</td> <td>Visa Fee Collection.</td> </tr> </tbody> </table>	Value	Description	FC	From FeeCollection.	MCB	Mastercom Chargebacks. Raised either via Mastercom UI or Mastercom SmartClient API.	MCF	Mastercom pre-arbitration or arbitration case filing. Raised either via Mastercom UI or Mastercom Smartclient API.	VFC	Visa Fee Collection.
Value	Description											
FC	From FeeCollection.											
MCB	Mastercom Chargebacks. Raised either via Mastercom UI or Mastercom SmartClient API.											
MCF	Mastercom pre-arbitration or arbitration case filing. Raised either via Mastercom UI or Mastercom Smartclient API.											
VFC	Visa Fee Collection.											

## Example

```
<RecordType>MCF</RecordType >
```

## RecType

The [RecType](#) element describes whether this record is an advice or a reversal.

Permitted Value	Description	Data Type
ADV	Advice Record	xs:string
REV	Reversal Record	xs:string

## Example

```
<RecType>ADV</RecType>
```

## Response

The [Response](#) element describes the approval status of a transaction request.

Attribute	Description	Data Type	Required	Constraints / Permitted Values
approved	Approval component.	<approved>	Yes	See <a href="#">approved</a> .
actioncode	Describes the transaction status, which can be either 4 or 0: 4 = indicates a decline or where the transaction type is an authorisation advice 0 = indicates a transaction status that is not a decline or an authorisation advice For a <a href="#">CardFinancial</a> , <a href="#">ActionCode</a> is always zero.	xs:string	If applicable	Applies to <a href="#">CardAuthorisation</a> and <a href="#">CardFinancial</a> only.
responsecode	Holds the <i>ResponseStatus</i> field from the authorisation record in the Thredd database (as sent to Visa or Mastercard). This is a 2 digit Response Code which is based on the ISO 8583:1987 standard. It corresponds to the DE39 response code field that Thredd sent in the response message.  In most cases, the <a href="#">responsecode</a> field should match the authorisation <i>ResponseStatus</i> you provided in your EHI response. The exception is for EHI modes where: <ul style="list-style-type: none"> <li>Thredd did not receive your EHI response and made a Stand-In Processing (STIP) decision</li> <li>Thredd received your EHI response, but determined the <i>ResponseStatus</i> was not valid</li> </ul>	xs:string	If applicable	Applies to <a href="#">CardAuthorisation</a> and <a href="#">CardFinancial</a> only.

Attribute	Description	Data Type	Required	Constraints / Permitted Values
	<ul style="list-style-type: none"> <li>The EHI response you sent was an internal Thredd response code (such as 'C0' or 'C1'). In this case the <a href="#">responsecode</a> field will reflect the response actually sent to Visa/Mastercard (after mapping from an internal Thredd EHI ResponseStatus value)</li> </ul>			
additionaldesc	Extra information.	xs:string	If applicable	Maximum 500 characters. Applies to <a href="#">CardAuthorisation</a> only.

## Example

```
<Response approved="yes"actioncode="0"responsecode="00"></Response>
```

## ReversalReason

The [ReversalReason](#) element describes the reason for a reversal.

Permitted Value	Description	Data Type
0	Original authorisation was matched. This is where the original Authorisation value from the BLKAMT field was cancelled. This increases the AMTAVL balance because a settlement transaction has been matched and processed. This code would be used if the CardAuthorisation's AuthId is populated in the matching CardFinancial's Child Element AuthId.	xs:string
1	Original authorisation has expired. This is where the original Authorisation value from the BLKAMT field was cancelled. This increases the AMTAVL balance even though a settlement transaction has not been identified before the expiry of the Authorisation time limit. This code would be used if the CardAuthorisation's AuthId is not present in any CardFinancial's Child Element AuthId.	xs:string
2	Manually deleted, where the erroneously processed authorisation and reversal for a merchant is processed directly into the processor's system.	xs:string
3	Online reversal, where the erroneously processed authorisation and reversal for a merchant is entered via the processor's online portal.	xs:string

## Example

```
<ReversalReason>0</ReversalReason>
```

## RIID

The [RIID](#) element describes the Receiving Institution Identification Code (RIID). This is the Program Manager's ICA as provided by Mastercard or the equivalent account code from Visa.

Description	Base Data Type	Constraints / Permitted Values
Receiving Institution Identification Code.	xs:string	Alphanumeric, maximum 11 characters.

## Example

```
<RIID>00000000123</RIID>
```

## Schema

The [Schema](#) element describes the name of the card scheme processing the transaction. For example: Visa (VISA), Mastercard (MCRD).

Permitted Value	Description	Data Type
CIRR	Euro Cirrus	xs:string
ECRD	EuroCard	xs:string
MAES	Maestro	xs:string
CIMA	Cirrus Maestro	xs:string
MCRD	Mastercard	xs:string
VISA	Visa	xs:string
PLUS	PLUS Card	xs:string
DGN	Discover Network	xs:string

## Example

```
<Schema>MCRD</Schema>
```

## Sender

The [Sender](#) element provides details of the sender of the payment, where there is a money transfer. See also [Receiver](#).

Attribute	Description	Data Type	Required	Constraints / Permitted Values
firstname	FirstName	xs:string	No	Alphanumeric, maximum 99 characters.
middlename	Middle Name	xs:string	No	Alphanumeric, maximum 99 characters.
lastname	Last Name	xs:string	No	Alphanumeric, maximum 99 characters.
streetaddress	Street Address	xs:string	No	Alphanumeric, maximum 99 characters.
city	City	xs:string	No	Alphanumeric, maximum 99 characters.
provincecode	Province code	xs:string	No	Alphanumeric, maximum 99 characters.
country	Country	xs:string	No	Normally 3-character alpha ISO code.
postcode	Postcode	xs:string	No	Alphanumeric, maximum 99 characters..
dateofbirth	Date of birth	xs:string	No	Format: MMDDYYYY
accountnumber	Account Number	xs:string	No	Alphanumeric, maximum 99 characters.
idtype	The type of identification provided by the user.	xs:string	No	Values are:

Attribute	Description	Data Type	Required	Constraints / Permitted Values																				
				<table border="1"> <thead> <tr> <th>Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>00</td> <td>Passport</td> </tr> <tr> <td>01</td> <td>National Identification Card</td> </tr> <tr> <td>02</td> <td>Driver's License</td> </tr> <tr> <td>03</td> <td>Government Issued</td> </tr> <tr> <td>04</td> <td>Other</td> </tr> <tr> <td>05-10</td> <td>Reserved</td> </tr> </tbody> </table>	Value	Description	00	Passport	01	National Identification Card	02	Driver's License	03	Government Issued	04	Other	05-10	Reserved						
Value	Description																							
00	Passport																							
01	National Identification Card																							
02	Driver's License																							
03	Government Issued																							
04	Other																							
05-10	Reserved																							
idnbr	Identification number (e.g. passport or driver license number)	xs:string	No	Alphanumeric, maximum 99 characters.																				
idctrycode	ID country code (e.g. 826)	xs:string	No	Normally 3-character alpha ISO code.																				
nationality	Nationality	xs:string	No	Normally 3-character alpha ISO code.																				
phonenumbr	Phone number	xs:string	No	Alphanumeric, maximum 99 characters.																				
idexpdate	Identification expiry date	xs:string	No	Format: MMDDYYYY																				
acctnbrtype	The type of account number	xs:string	No	<table border="1"> <thead> <tr> <th>Values</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>00</td> <td>Other</td> </tr> <tr> <td>01</td> <td>RTN + Bank Account</td> </tr> <tr> <td>02</td> <td>IBAN</td> </tr> <tr> <td>03</td> <td>Card Account</td> </tr> <tr> <td>04</td> <td>Email</td> </tr> <tr> <td>05</td> <td>Phone Number</td> </tr> <tr> <td>06</td> <td>Bank account number (BAN) + Bank Identification Code (BIC)</td> </tr> <tr> <td>07</td> <td>Wallet ID</td> </tr> <tr> <td>08</td> <td>Social Network ID</td> </tr> </tbody> </table>	Values	Description	00	Other	01	RTN + Bank Account	02	IBAN	03	Card Account	04	Email	05	Phone Number	06	Bank account number (BAN) + Bank Identification Code (BIC)	07	Wallet ID	08	Social Network ID

				<table border="1"> <thead> <tr> <th>Code</th> <th>Meaning</th> </tr> </thead> <tbody> <tr> <td>06</td> <td>Credit accounts other than those linked to a Visa card (includes credit cards and proprietary credit lines)</td> </tr> </tbody> </table>	Code	Meaning	06	Credit accounts other than those linked to a Visa card (includes credit cards and proprietary credit lines)
Code	Meaning							
06	Credit accounts other than those linked to a Visa card (includes credit cards and proprietary credit lines)							
claimcode	Claim code	xs:string	No	Alphanumeric, maximum 99 characters.				

## Example

```
<Sender firstname="FRST" middlename="M" lastname="LST NME" streetaddress="RM R STREET S
STREETI" city="MAIN" provincecode="MD" country="MDA"
postcode="00000" dateofbirth="07051999" accountnumber="4779300008363000" idtype="04"
idnbr="2014011000399" idctrycode="MDA" nationality="MDA"
phonenumber="2811131" idexpdate="102020" acctnbrtype="08" birthctry="MDA" fundssource="04" claimcode="TST"></Sender>
```

## Settlement

The [Settlement](#) element describes the Settlement details.

Attribute	Description	Data Type	Required	Constraints / Permitted Values
date	Date the original transaction was settled.	xs:string	No	Maximum 8 characters, Date in the format: YYYYMMDD
cycle	Indicates which of the Mastercard clearing cycles the transaction was processed in.	xs:string	No	Values 01 - 06.

## Example

An example of a Settlement which occurred in cycle 1 on 9th September 2017 is shown below.

```
<Settlement date="20170911" cycle="01"/></Settlement>
```

## SettlementAmt

The [SettlementAmt](#) element describes the settlement amount.

**Note:** Only Mastercard send a Settlement Amount to Thredd.

**Note:** For Visa, the [SettlementAmt](#) is the same as the Cardholder Billing amount ([BillAmt](#)).

**Note:** If you have a Visa multi-currency settlement BIN and Thredd's Visa Multi-currency settlement solution is enabled for your card programme, then this field is populated with a Thredd-calculated Settlement Amount and Currency, based on the relevant settlement currency plus the rates obtained from the Visa International TC56 Currency Conversion Rate file.

Attribute	Description	Data Type	Required	Constraints / Permitted Values
value	The value of the settlement amount.	xs:decimal	Yes	Decimal value.
currency	The 3 digit ISO code of currency that the transaction will be settled in.	xs:unsigned Short	Yes	3 digits.
rate	The conversion rate used to	<Rate>	Yes	Decimal value, maximum 9 decimal

Attribute	Description	Data Type	Required	Constraints / Permitted Values
	calculate the settlement amount value.			places, using conventional rounding down (1-4) and up (5-9).
date	Date the original transaction was settled.	xs:string	If applicable	Maximum 8 characters, Date in the format: YYYYMMDD Only required for chargebacks and representments.

## Example

The example below represents 10 GBP at an exchange rate of 1:1.

```
<SettlementAmt value="10.00" currency="826" rate="1.000000000"
date="20100825"></SettlementAmt>
```

## SettlementCycle

The [SettlementCycle](#) element describes the settlement cycle of the Chargeback record.

Description	Data Type	Constraints / Permitted Values
Settlement cycle of a Chargeback record.	xs:string	Maximum length 2 characters. Possible value: 01.

## Example

```
<SettlementCycle>01</SettlementCycle>
```

## SettlementDate

The [SettlementDate](#) element describes the date when the transaction is settled.

**Note:** In the [CardAuthorisation](#) element, this field only provides the Thredd transaction date.

Description	BaseType	Constraints / Permitted Values
Date (UTC)	xs:string	Maximum 8 characters, date in the format: YYYYMMDD

## Example

```
<SettlementDate>20210125</SettlementDate>
```

## SettlementIndicator

The [SettlementIndicator](#) element describes the type of settlement service, for example whether this is International or clearing-only.

Description	Base Data Type	Constraints / Permitted Values
The type of settlement service.	xs:string	Maximum length 1. Values are:

Description	Base Data Type	Constraints / Permitted Values												
		<table border="1"> <thead> <tr> <th>Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>International settlement service.</td> </tr> <tr> <td>3</td> <td>Clearing-only (valid only for countries with defined service).</td> </tr> <tr> <td>4</td> <td>Bilateral settlement. (Mastercard Only)</td> </tr> <tr> <td>8</td> <td>National Net settlement service (valid only for countries with defined service).</td> </tr> <tr> <td>9</td> <td>BASEII selects the appropriate settlement service based on routing and country-defined default. (Visa Only)</td> </tr> </tbody> </table>	Value	Description	0	International settlement service.	3	Clearing-only (valid only for countries with defined service).	4	Bilateral settlement. (Mastercard Only)	8	National Net settlement service (valid only for countries with defined service).	9	BASEII selects the appropriate settlement service based on routing and country-defined default. (Visa Only)
Value	Description													
0	International settlement service.													
3	Clearing-only (valid only for countries with defined service).													
4	Bilateral settlement. (Mastercard Only)													
8	National Net settlement service (valid only for countries with defined service).													
9	BASEII selects the appropriate settlement service based on routing and country-defined default. (Visa Only)													

## Example

```
<SettlementIndicator>0</SettlementIndicator>
```

## SettlementRecapID

**Note:** This sub-element only applies to Discover.

## Example

```
<SettlementRecapID
RecapDate="20240531" RecapNumber="092" SendingIIC="00000361641" ReceivingIIC="00000361603" CurrencyCode="GBP"/>
```

## SchemeSettlementDate

The [SchemeSettlementDate](#) element describes the scheme first presentment settlement date in a financial advice or reversal. The data contained in this element is taken from the following data sources received from Mastercard and Visa:

- Mastercard - DE48 PDS0159 subfield 8
- Visa - TC90 header date

Description	BaseType	Constraints / Permitted Values
Date (UTC)	xs:string	Maximum 8 characters, date in the format: YYYYMMDD.

## Example

```
<SchemeSettlementDate>20210125</SchemeSettlementDate>
```

## Source

The [Source](#) element provides details of the source wallet account from which funds are taken.

Attribute	Description	Data Type	Required	Constraints / Permitted Values
walletid	ID of the source wallet account.	bigint	Yes	0 to 2 <sup>64</sup>
basecurrency	Base currency of the source wallet account.	int	Yes	Currency in ISO 3-

Attribute	Description	Data Type	Required	Constraints / Permitted Values
				digit number format.
balancechange	Change in source wallet account balance amount.	decimal (19,4)	Yes	Precision = 19 digits, scale = 4 digits.
blockchange	Change in source wallet account blocked amount.	decimal (19,4)	Yes	Precision = 19 digits, scale = 4 digits.
newbalance	New source wallet account balance.	decimal (19,4)	Yes	Precision = 19 digits, scale = 4 digits.
newblock	New source wallet account blocked amount.	decimal (19,4)	Yes	Precision = 19 digits, scale = 4 digits.

## Example

```
<Source walletid="879" basecurrency="978" balancechange="10.5000" blockchange="5.5000" newbalance="5.0000" newblock="10.0000"/>
```

## Term

The [Term](#) element provides details of the terminal used in a POS card transaction.

Attribute	Description	Data Type	Required	Constraints/Permitted Values.
code	Card acceptor terminal ID (Mastercard DE 41 field). This is a unique code identifying a terminal at the card acceptor location.	<code>	Yes	See <a href="#">code</a>
location	Defines the site where the terminal is located, either a branch code or a store name.	xs:string	Yes	Maximum 128 characters
street	Description of the terminal street location.	xs:string	Yes	Maximum 64 characters
city	City	xs:string	Yes	Maximum 64 characters
country	Country code - ISO code.	xs:string	Yes	Must be 2 Characters.
inputcapability	The primary capability of the terminal for entering card information.	<inputcapability>	No	See <a href="#">PDS0105</a>
authcapability	This is the method available to verify the cardholder at this terminal.	<authcapability>	No	See <a href="#">authcapability</a>

## Example

```
<Term code="N376131"location="A BANK"street="A STREET"city="A CITY"
country="GB"inputcapability="5"authcapability="1"></Term>
```

## Trace

The [Trace](#) element provides an audit number that can be used in combination with other elements to identify a transaction.

Attribute	Description	Data Type	Required	Constraints / Permitted Values
auditno	<p>Card scheme System Trace Audit Number (STAN). The STAN is a 6 digit acquirer reference number between 000001 and 999999, generated sequentially by each acquirer. After reaching 999999 the acquirer repeats the STAN from 000001. The audit number remains unchanged for all messages within the life of the transaction (i.e. original and reversal). For partial reversals, a new Audit Number is required.</p> <p><b>Note:</b> The STAN is typically only unique per Card Scheme network, per Acquirer, per day. Acquirers who process more than 1000000 transactions per day will repeat the STAN. Therefore, <code>auditno</code> cannot be used to provide a unique reference.</p> <p><b>Tip:</b> You can use the <code>AuthId</code> element to uniquely identify a transaction.</p>	xs:string	No	Alphanumeric, maximum 6 characters
origauditno	This is only populated if the containing record is a reversal, and represents information regarding the original transaction.	xs:string	No	Alphanumeric, maximum 6 characters
Retrefno	Retrieval Reference Number. Contains a document reference supplied by the system retaining the original source information (ATM acquirer) and is used to assist in locating that information or its copy	xs:string	Yes	Alphanumeric, maximum 12 characters

## Example

```
<Trace auditno="1234"origauditno="345"Retrefno="AN1234"></Trace>
```

## Traceid\_Lifecycle

Lifecycle Trace ID. A transaction lifecycle identifier that allows you to track a transaction across its full lifecycle. This value is identical for all messages relating to the same transaction. For example, the following messages relating the same transaction will all have an identical Lifecycle Trace ID value: Authorisation, Second incremental authorisation, authorisation reversal, Financial Presentment, Chargeback, Second Presentment and Second Chargeback.

If there is more than one authorisation for the same transaction, both authorisations will have the same value.

Description	BaseType	Constraints / Permitted Values
<p>Identifier that is a concatenation of:</p> <ul style="list-style-type: none"> <li>• Scheme/Network identifier</li> <li>• Date in yyyyymmdd format</li> <li>• Unique scheme identifier.</li> </ul>	xs:string	<p>Varchar(40).</p> <p>Alphanumeric and '-' characters only.</p>

## Example

```
<Traceid_Lifecycle>BNET-20260305-MRGZ6IX6A</Traceid_Lifecycle>
```

## Txn

The [Txn](#) element describes how a transaction was validated and authenticated.

Attribute	Description	Data Type	Required	Constraints / Permitted Values
cardholderpresent	Indicates whether the cardholder was present during the transaction.	<cardholderpresent>	No	See <a href="#">cardholderpresent</a> .
cardpresent	Indicates whether the card was present during the transaction.	<cardpresent>	No	See <a href="#">cardpresent</a> .
cardinputmethod	The method used to input the information from the card to the terminal.	<cardinputmethod>	No	See <a href="#">cardinputmethod</a> .
cardauthmethod	The cardholder authentication method used in a card transaction.	<cardauthmethod>	No	See <a href="#">cardauthmethod</a> .
cardauthenticity	The component or person who verified the cardholder identity as reported in the <a href="#">cardauthmethod</a> field.	<cardauthenticity>	No	See <a href="#">cardauthenticity</a> .
TVR	Terminal Verification Results. This is the 10 hexadecimal characters representing the TVR 5 binary bytes.  This field should only be interpreted for EMV transactions ( <a href="#">Cardauthenticity</a> and <a href="#">Cardinputmethod</a> ).	xs:unsigned Long	If applicable	This field is only present in financial advices if the Acquirer systems provide Chip data Default value is zero.
TTI	Three-digit Transaction Type Identifier (Mastercard DE 048, PDS 0043 field). This is populated whenever it is found in the source presentment data for a <a href="#">CardFinancial</a> record. Not applicable to other record types.	<TTI>	No	This field can be used to support Mastercard QMR Reporting. For details of possible values, see the Mastercard IPM Clearing Formats manual,

## Example

```
<Txn cardholderpresent="0"cardpresent="1"cardinputmethod="2"
cardauthmethod="3"cardauthenticity="3"TVR="0"TTI="C07"></Txn>
```

## TxnAmt

The [TxnAmt](#) element describes a transaction amount (value and currency).

Attribute	Description	Data Type	Required	Constraints / Permitted Values
value	The value of the transaction amount.	xs:decimal	Yes	Decimal value.
currency	The transacted currency code.	xs:unsignedShort	Yes	3 digits.

## Example

```
<TxnAmt value="10.00"currency="826"></TxnAmt>
```

## TxnCode

The `TxnCode` element describes the transaction type and direction.

Attribute	Description	Data Type	Required	Constraints / Permitted Values														
direction	The direction of the transaction.	<Direction>	Yes	See <a href="#">direction</a>														
Type	Details of the type of transaction.	xs:string	Yes	Must be one of the following values <table border="1" data-bbox="1398 1213 1852 1952"> <thead> <tr> <th>Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>pos</td> <td>Point of Sale transaction.</td> </tr> <tr> <td>atm</td> <td>Automated Teller Machine transaction (Cash Withdrawal/Advance)</td> </tr> <tr> <td>pos_cb</td> <td>Point of Sale transaction with cashback.</td> </tr> <tr> <td>pos_re</td> <td>Purchase refund.</td> </tr> <tr> <td>fee</td> <td>Fee collection. If direction is a debit the fee is a credit to the transaction originator. If the direction is a credit then the fee is a debit to the transaction originator.</td> </tr> <tr> <td>tfr</td> <td>Cardholder funds transfer.</td> </tr> </tbody> </table>	Value	Description	pos	Point of Sale transaction.	atm	Automated Teller Machine transaction (Cash Withdrawal/Advance)	pos_cb	Point of Sale transaction with cashback.	pos_re	Purchase refund.	fee	Fee collection. If direction is a debit the fee is a credit to the transaction originator. If the direction is a credit then the fee is a debit to the transaction originator.	tfr	Cardholder funds transfer.
Value	Description																	
pos	Point of Sale transaction.																	
atm	Automated Teller Machine transaction (Cash Withdrawal/Advance)																	
pos_cb	Point of Sale transaction with cashback.																	
pos_re	Purchase refund.																	
fee	Fee collection. If direction is a debit the fee is a credit to the transaction originator. If the direction is a credit then the fee is a debit to the transaction originator.																	
tfr	Cardholder funds transfer.																	
Group	The summary group type of the transaction.	<Group>	Yes	See <a href="#">Group</a> .														
ProcCode	The first two digits of the Processing Code + the two digits of the AccountType + Two digits of the Destination Account. See <a href="#">Processing Codes</a> .	xs:string	If applicable	For example: "000000", "003000", "010000" <b>Note:</b> "390000" is used to identify an Account Verification transaction.														
Partial	If a fee was charged, indicates whether the fee was partial.	xs:string	If applicable	Default:"NA"														
FeeWaivedOff	If a fee was charged and the fee was partial, shows the amount of the fee that was not charged.	xs:decimal	If applicable	Default:0														

## Example

```
<TxnCode direction="debit"Type="atm"Group="atm"ProcCode="000000"></TxnCode>
```

## UniqueTransactionReference

**Note:** This sub-element only applies to Discover.

## Example

```
<UniqueTransactionReference>073679876543210</TxnCode>
```

## Usage

The [Usage](#) element indicates whether the Chargeback was credited to a card.

Description	Data Type	Constraints / Permitted Values										
Indicates whether the Chargeback is manually credited to card.	xs:string	Maximum 1-character. Possible values are: <table border="1" data-bbox="850 1240 1852 1576"> <thead> <tr> <th>Value</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>0</td> <td>Credit acknowledged, cleared and not credited to a card.</td> </tr> <tr> <td>1</td> <td>Credit acknowledged, cleared and credited to a card for arbitration Chargeback.</td> </tr> <tr> <td>M</td> <td>Mastercard, Credit acknowledged, cleared and credited to a card.</td> </tr> <tr> <td>S</td> <td>Related to a Visa card.</td> </tr> </tbody> </table>	Value	Description	0	Credit acknowledged, cleared and not credited to a card.	1	Credit acknowledged, cleared and credited to a card for arbitration Chargeback.	M	Mastercard, Credit acknowledged, cleared and credited to a card.	S	Related to a Visa card.
Value	Description											
0	Credit acknowledged, cleared and not credited to a card.											
1	Credit acknowledged, cleared and credited to a card for arbitration Chargeback.											
M	Mastercard, Credit acknowledged, cleared and credited to a card.											
S	Related to a Visa card.											

## Example

```
<Usage>1</Usage>
```

## VATAmt

Value Added Tax (VAT).

Attribute	Description	Base Data Type	Required	Constraints / Permitted Values
value	The value of the VAT	xs:decimal	Yes	Decimal value

## Example

```
<VATAmt value="0.5" />
```

## 3.1.2 Attributes

Attributes are listed below in alphabetical order.

approved	cardauthenticity	cardpresent	domesticMaestro	MaskedPAN
authcapability	cardauthmethod	code	Group	MCC
cardholderpresent	cardinputmethod	direction	inputcapability	PAN
				PDS0105

## approved

The `approved` attribute describes whether a transaction was approved.

Permitted Value	Description	Data Type
yes	Approved	xs:string
no	Not Approved	xs:string

## Example

```
approved="yes"
```

## authcapability

The `authcapability` attribute describes the capabilities of the terminal.

Permitted Value	Description	Data Type
0	No electronic authentication	xs:string
1	PIN	xs:string
2	Electronic Signature Analysis	xs:string
3	Biometrics	xs:string
4	Biographs	xs:string
5	Manual signature verification	xs:string
6	Manual other	xs:string
7	Offline PIN	xs:string
8	Online PIN	xs:string
9	3D-Secure	xs:string
10	Account based digital signature	xs:string
11	Public key based digital signature	xs:string
12	Unknown	xs:string
13	RFU	xs:string
14	RFU	xs:string
15	RFU	xs:string
16	RFU	xs:string
17	RFU	xs:string

Permitted Value	Description	Data Type
18	RFU	xs:string
19	RFU	xs:string

## Example

```
authcapability="1"
```

## cardholderpresent

The [cardholderpresent](#) attribute describes whether a cardholder was present during a transaction.

Permitted Value	Description	Data Type
0	Cardholder present	xs:string
1	Not present, unspecified	xs:string
2	Not present, mail order	xs:string
3	Not present, telephone	xs:string
4	Not present, standing authorisation	xs:string
5	Not present, electronic order	xs:string
6	Not present, instalment transaction	xs:string
9	Unknown	xs:string
Empty	Empty to enable Null value support	xs:string

## Example

```
cardholderpresent="3"
```

## cardauthenticity

The [cardauthenticity](#) attribute describes the entity that authenticated the cardholder.

Permitted Value	Description	Data Type
0	Not Authenticated	xs:string
1	Integrated Chip Card	xs:string
2	ISO10202 = Terminal	xs:string
3	Authorising Agent	xs:string
4	Merchant	xs:string
5	Other	xs:string

Permitted Value	Description	Data Type
6	Cardholder device	xs:string
7	Wallet Provider / Token Requestor	xs:string
8	Unknown	xs:string

## Example

```
cardauthentity="8"
```

## cardauthmethod

The `cardauthmethod` attribute describes the authentication method used in a card transaction.

Permitted Value	Description	Data Type
0	Not authenticated	xs:string
1	PIN	xs:string
2	electronic signature analysis	xs:string
3	Biometrics	xs:string
4	Biographic	xs:string
5	Manual Signature Verification	xs:string
6	Manual Other (e.g. Licence)	xs:string
7	Other	xs:string
8	Unknown	xs:string
9	Passcode/Password (e.g mobile phone unlock code, or One-Time-Passcode sent to cardholder)	xs:string
A	Pattern (e.g. mobile phone device unlock pattern)	xs:string
B	Possession of hardware device (eg phone, number generating keyfob)	xs:string
C	As 'B' but additionally with user verification	xs:string
D	Possession of software application (e.g. passcode generating program)	xs:string
E	As 'D' but additionally with user verification	xs:string
S	3D-secure cardholder authentication	xs:string

## Example

```
cardauthmethod="1"
```

## cardinputmethod

The `cardinputmethod` attribute describes the method used to input the card data (e.g., PAN) into the point of sale terminal.

Permitted Value	Description	Data Type
0	unspecified	xs:string
1	manual, no terminal	xs:string
2	magnetic stripe read	xs:string
3	bar code	xs:string
4	OCR	xs:string
5	integrated circuit card (ICC)	xs:string
6	key entered	xs:string
7	contactless ICC	xs:string
C	E-Commerce with channel encryption and chip cryptogram used	xs:string
E	Contactless magnetic stripe	xs:string
F	Account Data on file	xs:string
G	Key entered by acquirer	xs:string
M	MICR reader	xs:string
P	Mobile banking application	xs:string
Q	QR code	xs:string
V	E-Commerce	xs:string
W	DPAN	xs:string
Empty	Empty to enable Null value support	xs:string

## Example

```
cardinputmethod="5"
```

## cardpresent

The `cardpresent` attribute indicates whether a card was present during a transaction.

Permitted Value	Description	Data Type
0	Card not present	xs:string
1	Card present	xs:string

Permitted Value	Description	Data Type
9	Unknown	xs:string
Empty	Empty to enable Null value support	xs:string

## Example

```
cardpresent="1"
```

## code

The [Code](#) attribute describes the card acceptor terminal ID (Mastercard DE 41 field). This is a unique code identifying a terminal at the card acceptor location.

Description	Base Data Type	Constraints / Permitted Values
Terminal Code	xs:string	Maximum 8 Characters

## Example

```
code="12345678"
```

## direction

The [Direction](#) attribute describes the direction of a cash movement.

Permitted Value	Description	Data Type
credit	Describes a credit transaction.	xs:string
debit	Describes a debit transaction.	xs:string

## Example

```
direction="debit"
```

## domesticMaestro

The [domesticMaestro](#) attribute indicates whether a transaction originates from a Domestic Maestro card.

Permitted Value	Description	Data Type
yes	Used to indicate that the transaction originates from a domestic Maestro card.	xs:string
no	Used to indicate that the transaction does not originate from a domestic Maestro card.	xs:string

## Example

```
domesticMaestro="yes"
```

## Group

The [Group](#) attribute describes the high-level transaction type.

Permitted Value	Description	Data Type
pos	Point of Sale Transactions (including reversals).	xs:string
atm	Automated Teller Machine transactions (including reversals).	xs:string
fee	Fees.	xs:string

## Example

Group="atm"

## inputcapability

The [inputcapability](#) attribute describes the card input capability.

Permitted Value	Description	Data Type
0	Unknown	xs:string
1	Manual - no Location	xs:string
2	Magnetic Stripe Read	xs:string
3	Bar Code	xs:string
4	OCR	xs:string
5	EMV contact	xs:string
6	Key Entered	xs:string
7	Contactless Magnetic Stripe	xs:string
8	EMV contactless	xs:string
9	Account Data on file	xs:string
10	QR code	xs:string
11	E-Commerce	xs:string
12	E-Commerce with EMV cryptogram	xs:string
13	MICR reader	xs:string
14	Mobile Banking	xs:string
15	RFU	xs:string
16	RFU	xs:string
17	RFU	xs:string
18	RFU	xs:string
19	RFU	xs:string

## Example

```
inputcapability="6"
```

## MaskedPAN

Masked Primary Account Number (PAN) where six of the digits are replaced with the \* character.

Description	Base Data Type	Constraints / Permitted Values
Masked Primary Account Number (PAN).	xs:string	Maximum 16 characters

## Example

```
MakedPAN="592123*****1134"
```

## MCC

The [MCC](#) attribute describes the Merchant Category Code (MCC).

Description	Base Data Type	Constraints / Permitted Values
Merchant category code.	xs:string	Maximum 4 characters. Permissible values as per Mastercard Global Rules for Merchant Classification Codes.

## Example

```
MCC="5921"
```

## PAN

The [PAN](#) attribute contains the Primary Account Number if you are PCI DSS Compliant or otherwise the [Thredd 16-digit public token](#).

Description	Base Data Type	Constraints / Permitted Values
PAN (Primary Account Number).	xs:string	Minimum 14 characters, maximum 19 characters

## Example

```
PAN="1234567812345678"
```

## Thredd 16-digit public token

The format of the 16-digit Thredd public token is as follows:

`xxxYYYYYYYYZZZZ`

where:

- `xxx` – is the 3 digits derived from the Thredd internal scheme ID
- `YYYYYYYYYY` – is the 9-digit Thredd public token
- `zzzz` – is the last 4 digits of the card's PAN

## PDS0105

The [PDS0105](#) attribute describes the name of the financial advice file received from Mastercard.

Description	Base Data Type	Constraints / Permitted Values
File_ID_PDS0105	xs:string	Format as follows : "T112.001" + "YYMMDD" + "00000012181" + XXYZZ Where XX = Clearing cycle indicator Y = delivery cycle ZZ = file number in the given clearing cycle

## SECTION 4: APPENDICES

This section contains a list of appendices.

## 4.1 Appendices

Refer to the table below for details of available appendices:

#	Appendix	Description
4.2	Card Status Codes	Lists the possible card status codes or the status of a payment token.
4.3	FeeClass Element	Details of the FeeClass element.
4.6	Message Reason Codes	List of message reason codes.
4.7	Payment Token Fields	Provides details of possible values for the fields which hold payment token information.
4.8	Processing Codes	List of processing codes
4.9	Load Sources	Provides details of possible values for the source of a Load or Unload request.
4.10	Clearing Report Example	Provides an example of a Clearing Report.
4.11	Non-Clearing Report Example	Provides an example of a Non-Clearing Report.
4.12	Clearing Report Schema	Provides the Clearing Report schema.
4.13	Non-Clearing Report Schema	Provides the Non-Clearing Report schema.

## 4.2 Card Status Codes

This section lists the possible card status codes. These are status codes that you can set for card via web services, Smart Client, or Thredd Portal. They are also used to indicate the status of a payment token.

Status Code	Description
00	All Good. Indicates that the card is good for use, but does not indicate whether it is active.
01	Refer to card issuer
02	Card not yet activated
04	Capture card
05	Do not honour
14	Invalid card. If you receive this status, it indicates that this card does not exist on the Thredd system and was used for a fraudulent transaction.
41	Lost card
43	Stolen card
46	Closed Account
54	Expired card
57	Transaction not permitted to cardholder
59	Suspected Fraud
62	Restricted card
63	Security violation
70	Cardholder to contact issuer
75	Allowable number of PIN tries exceeded
83	Card destroyed
98	Refund given to customer
99	Card voided
G1	A short-term block which temporarily blocks card usage for all card transactions (excluding credits and refunds) for a short period.
G2	Short-term full block (all transactions are blocked).
G3	Long-term block (excluding credits and refunds).
G4	Long-term full block (all transactions are blocked).
G5	Thredd Protect: A short-term block which temporarily blocks card usage for all card transactions (excluding credits and refunds) for a short period.

Status Code	Description
G6	Thredd Protect: Short-term full block (all transactions are blocked).
G7	Thredd Protect: Long-term block (excluding credits and refunds).
G8	Thredd Protect: Long-term full block (all transactions are blocked).
G9	IVR Lost/Stolen block. Non-reversible status, equivalent to status code 41.

## 4.3 FeeClass Element

Code	Description	Fee Category
0	This value must be used when the FeeClass "type" attribute is 0, 2, 4 or 5. This is when it is a settlement fee.	Settlement Fee
1	For Card Financial Fee Class element record, The "code" attribute always has a value of "1"	Settlement Fee
1000	Cash	Card transaction
1010	Sale/sale with tip	Card transaction
1020	Sale with cashback	Card transaction
1030	Declined transaction	Card transaction
1040	Other transaction ( e.g. PIN change )	Card transaction
1060	Currency exchange mark-up percentage	Card transaction
1061	Foreign exchange due to markup on network rate	Card transaction
1062	Currency exchange rate mark-up percentage for authorisation padding	Card transaction
1063	Currency Conversion Assessment(CCA)	Card transaction
1100	Retail club out-of-club fee	Card transaction
2010	Card issue	Card production
2011	Card reissue (renewal)	Card production
2012	Damaged card replacement	Card production
2013	Lost/stolen card replacement	Card production
2014	Card restriction	Card production
2015	Changing card limit	Card production
2016	Authorisation override	Card production
2110	PIN issue	Card production
2111	PIN reissue (new PIN)	Card production
2112	PIN reminder (same PIN)	Card production
2300	Card value load	Card operation
2301	Card activation	Card operation
2302	Status change	Card operation
2303	Balance enquiry	Card operation

Code	Description	Fee Category
2304	Account enquiry	Card operation
2306	Card transfer	Card operation
2307	Card value unload	Card operation
2308	Cardholder registration	Card operation
2309	Card value unload and status change	Card operation
2310	Cardholder details update	Card operation
2311	Set PIN real-time	Card operation
2312	Get PIN real-time	Card operation
2313	Change PIN real-time	Card operation
2314	Generate and Get PIN real-time	Card operation
2320	SMS miscellaneous service fee	Card operation
2401	Card dormancy	Card management
2402	Card management	Card management
2441	Card expiry breakage	Card management
2442	Card lost/stolen breakage	Card management
2443	Account end-of-life breakage	Card management
6000	Non-Domestic Fee	Card transaction

## 4.4 Message Reason Codes

Reason Codes vary depending upon the transaction type (Domestic Maestro/MasterCard International), and the record type involved. The following tables describe all available values.

### 4.4.1 Domestic Maestro Reason Codes

The table below defines the Message Reason Codes (<ReasonCode>) for the UK Domestic Maestro.

Record Type	Code	Meaning
<CardFinancial>	1400	Not previously authorised
<CardFinancial>	1401	Previously approved authorization where the amount is the same
<CardFinancial>	1402	Previously approved authorization where the amount differs
<CardFinancial>	1403	Previously approved authorization where there is a partial amount and multi-clearing
<CardFinancial>	1404	Previously approved authorization where there is a partial amount and final clearing
<CardFee>	7601	Recovered card award fee for the collection of reward for a card acceptor, or financial institution employee when a card has been recovered
<CardFee>	7604	Emergency card replacement fee for the collection of fees associated with the Emergency Card Replacement
<CardFee>	7777	Merchant Funds Transfer for a transfer of funds between an acquirer and a merchant's bank on behalf of a merchant

### 4.4.2 Mastercard International Reason Codes

The table below defines the Message Reason Codes (<ReasonCode>) for MasterCard International.

Record Type	Code	Meaning
<CardFinancial>	1400	Not previously authorised
<CardFinancial>	1401	Previously approved authorization where the amount is the same
<CardFinancial>	1402	Previously approved authorization where the amount differs
<CardFinancial>	1403	Previously approved authorization where there is a partial amount and multi-clearing
<CardFinancial>	1404	Previously approved authorization where there is partial amount and final clearing
Representments/Reversals	2000	General or invalid chargeback
Representments/Reversals	2001	Invalid Acquirer Reference Data on chargeback; no documentation required or provided
Representments/Reversals	2002	Non receipt of required documentation to support chargeback
Representments/Reversals	2003	Correct transaction date provided
Representments/Reversals	2004	Invalid Acquirer Reference Data on chargeback; documentation was received

Record Type	Code	Meaning
Representments/Reversals	2005	Correct card acceptor location/description provided
Representments/Reversals	2008	Issuer authorised transaction
Representments/Reversals	2011	Credit previously issued
Representments/Reversals	2700	Chargeback remedied (see corresponding documentation)
Representments/Reversals	2701	Duplicate chargeback
Representments/Reversals	2702	Past chargeback time limit
Representments/Reversals	2703	Requested transaction document provided (requires hardship variance)
Representments/Reversals	2704	Invalid merchant message text
Representments/Reversals	2705	Correct MCC provided
Representments/Reversals	2706	Authorisation advised suspicious
Representments/Reversals	2707	No authorization request required nor attempted
Representments/Reversals	2708	Account was not listed on the applicable warning bulletin as of the transaction date
Representments/Reversals	2709	Documentation received was illegible
Representments/Reversals	2710	Documentation received was invalid/incomplete
Representments/Reversals	2711	Missing documentation is being supplied Reserved for UK domestic use
Representments/Reversals	2712	Other than required/requested documentation provided Reserved for UK domestic use
Representments/Reversals	2713	Invalid Chargeback
Representments/Reversals	2870	Chip Liability Shift Reserved for intra-European use only
Chargebacks / Reversals	4515	Cardholder Denies
Chargebacks / Reversals	4522	Authorisation Declined
Chargebacks / Reversals	4801	Requested transaction data was not received
Chargebacks / Reversals	4802	Requested information illegible or missing
Chargebacks / Reversals	4804	Multiple Processing, Duplicate
Chargebacks / Reversals	4807	Warning bulletin
Chargebacks / Reversals	4808	Requested/required authorization not obtained
Chargebacks / Reversals	4809	Transaction Not Reconciled

Record Type	Code	Meaning
Chargebacks / Reversals	4812	Account number was not on file
Chargebacks / Reversals	4831	Transaction amount differs
Chargebacks / Reversals	4834	Duplicate processing
Chargebacks / Reversals	4835	Card not valid or expired
Chargebacks / Reversals	4837	Fraudulent transaction; no cardholder authorization
Chargebacks / Reversals	4840	Fraudulent processing of transaction
Chargebacks / Reversals	4841	Canceled recurring transaction
Chargebacks / Reversals	4842	Late presentment
Chargebacks / Reversals	4846	Correct transaction currency code was not provided
Chargebacks / Reversals	4847	Fraudulent transaction; exceeds floor limit and not authorized
Chargebacks / Reversals	4849	Questionable card acceptor activity
Chargebacks / Reversals	4850	Credit posted as purchase
Chargebacks / Reversals	4853	Cardholder Dispute Defective/Not as Described
Chargebacks / Reversals	4854	Cardholder dispute not elsewhere classified (U.S. only)
Chargebacks / Reversals	4855	Non receipt of merchandise
Chargebacks / Reversals	4857	Card-activated phone transaction
Chargebacks / Reversals	4859	Services not rendered
Chargebacks / Reversals	4860	Credit not processed
Chargebacks / Reversals	4862	Counterfeit transaction; magnetic strip POI fraud
Chargebacks / Reversals	4863	Cardholder does not recognize(potential fraud) Not valid for domestic UK transactions
Chargebacks / Reversals	4870	Chip Liability Shift Reserved for intra-European use
Chargebacks / Reversals	4900	General and invalid second presentment. Second Presentment did not remedy First Chargeback
Chargebacks / Reversals	4901	Required documentation not received to support prior Second Presentment
Chargebacks / Reversals	4902	Documentation received was illegible
Chargebacks / Reversals	4903	Documentation received was invalid/incomplete
Chargebacks / Reversals	4905	Invalid Acquirer Reference Data in Second Presentment. Documentation was received or was not required

Record Type	Code	Meaning
Chargebacks / Reversals	4906	Missing documentation is being supplied
Chargebacks / Reversals	4907	Other than required/requested documentation provided Reserved for UK Domestic use
Chargebacks / Reversals	4908	Invalid Acquirer Reference Data in Second Presentment, Documentation was received.
Chargebacks / Reversals	4999	Domestic Chargeback Dispute Reserved for intra-European use
<CardFee>	7600	Lost/stolen telex/phone fee. This is for the collection of stolen report fee and phone or telex costs incurred for taking a lost or stolen card report
<CardFee>	7601	Recovered card award fee. This is for the collection of reward for a card acceptor or financial institution employee when a card has been recovered
<CardFee>	7602	Emergency cash disbursement fee. This is for the collection of fees associated with the handling of emergency cash disbursements to cardholders. Not valid for intra-European transactions
<CardFee>	7603	Compliance ruling settlement. This is for the collection of a compliance ruling settlement amount
<CardFee>	7604	Emergency card replacement fee. This is for the collection of fees associated with the Emergency Card Replacement Service (ECR)
<CardFee>	7605	Warning bulletin handling fee-issuer originated. This is for the settlement of warning bulletin handling fees in accordance with MasterCard operating rules
<CardFee>	7606	Good faith acceptance settlement. This is for settlement of the amount of a good faith acceptance
<CardFee>	7607	Collection letter handling fee. This is for settlement of the amount of a collection letter acceptance
<CardFee>	7608	Telex authorization fee. This is for collection of fees associated with an international telex authorisation
<CardFee>	7610	Investigation fee. This is for fee collection when an investigation report has been completed by an investigating member on behalf of the requesting member.
<CardFee>	7611	Retrieval fee reversal. This is for issuer-originate, and is used to reverse a retrieval request fulfillment fee for documents never received or invalid documents. Note: An issuer would use this code in response to receiving an invalid message from an acquirer containing code 7614,
<CardFee>	7612	Retrieval handling fee; issuer-originated. This is used to penalize an acquirer for incorrect information verified by the retrieval request document.
<CardFee>	7614	Non-MasterCom fulfillment fee settlement. This is for settlement of retrieval request fulfillment not processed through the MasterCom system
<CardFee>	7616	Warning bulletin handling fee (acquirer originated). This is for settlement of warning bulletin handling fees in accordance with MasterCard operating rules. OR Handling fee for second presentment of reason codes 4812 and 4835 for chip transactions where transaction certificate and DE 55 are present in the clearing

Record Type	Code	Meaning
		message. Acquirer originated.
<CardFee>	7617	Adjustment for promotional transactions
<CardFee>	7618	Reversal of previously reimbursed State Fuel Tax. Refer to the MasterCard Government Card Service Guide. Not valid for intra-European transactions
<CardFee>	7619	Emergency card replacement center, cash advance lockbox fee. Not valid for intra-European transactions
<CardFee>	7621	ATM Balance Inquiry Fee
<CardFee>	7622	Handling Fee for Authorisation Related Chargebacks (4807, 4808 and 4847). This is for issuer use in a Fee Collection (Handling Fee) message after sending First Chargeback for one of the specified authorization related chargebacks. Not valid for intra-European transactions
<CardFee>	7623	Handling Fee for Authorisation Related Chargebacks (4807, 4808 and 4847). This is for issuer use in a Fee Collection (Handling Fee) message after sending Second Presentment, which indicates that the transaction was authorized. Not valid for intra-European transactions
<CardFee>	7624	Handling Fee for Authorisation Related Chargebacks (4807, 4808 and 4847). This is for issuer use in a Fee Collection (Handling Fee) message after sending Arbitration Chargeback for one of the specified authorization related chargebacks. Not valid for intra-European transactions
<CardFee>	7625	PIN management Service at ATM For intra-European use only.
<CardFee>	7626	Authorisation reversal. This is for acquirer use to advise the issuer of an authorization that needs to be reversed
<CardFee>	7627	Failure to provide a merchant advice code in a Fee Collection (Handling Fee) message.
<CardFee>	7628	Reclaim surcharge. This is restricted to intra-European and European transaction-related services.
<CardFee>	7680	Installments - Merchant fee for single purchase.
<CardFee>	7681	Installments - Merchant fee for aggregated purchases.
<CardFee>	7700	Intracurrency agreement settlement; for settlement of amounts in accordance with an intracurrency agreement between transaction originator and transaction destination parties. Not valid for intra-European transactions
<CardFee>	7500 to 7779	Bilateral agreement settlement. This is for settlement amounts in accordance with a bilateral agreement between transaction originator and transaction destination parties.
<CardFee>	7780 to 7781	Bilateral agreement settlement. This is for settlement amounts in accordance with a bilateral agreement between transaction originator and transaction destination parties.

Record Type	Code	Meaning
<CardFee>	7782 to 7789	Bilateral agreement settlement. This is for settlement amounts in accordance with a bilateral agreement between transaction originator and transaction destination parties.
<CardFee>	7790 to 7799	Bilateral agreement settlement. This is for settlement amounts in accordance with a bilateral agreement between transaction originator and transaction destination parties.
<CardFee>	7800	MCBS member settlement; for collection or payment of such things as member assessments, processed through the MasterCard Consolidated Billing System (MCSB). Not valid for intra-European transactions.
<CardFee>	7801	MasterCard compliance case filling fee. This is for collection of a member arbitration or compliance case filling fee.
<CardFee>	7802	Interchange compliance adjustment. This is for settlement of financial amounts related to interchange compliance.
<CardFee>	7803	Interchange compliance adjustment reversal. This is for settlement of financial amounts related to the reversal of a previous interchange compliance adjustment.
<CardFee>	7804	ATM transaction settlement; for settlement of daily ATM transaction amounts.
<CardFee>	7805	ATM intracountry switch fee settlement. This is for settlement of daily ATM transaction intracountry switch fees. Not valid for intra-European transactions.
<CardFee>	7806	ATM Network Information Control System (NICS) switch fee settlement. This is for settlement of MDS NICS Switch fees. Not valid for intra-European transactions
<CardFee>	7807	ATM intracountry first chargeback settlement; for settlement of daily ATM transaction intracountry first chargeback amounts. Not valid for intra-European transactions
<CardFee>	7811	Reimbursement of State Fuel Tax. Refer to the MasterCard Government Card Services Guided. Not valid for intra-European transactions
<CardFee>	7812	Collection of return of collateral for security arrangement. Not valid for intra-European transactions
<CardFee>	7813	Mexico IVA fees Not valid for intra-European transactions
<CardFee>	7814	Mexico IVA Fees Not valid for intra-European transactions
<CardFee>	7815	Mexico IVA fees. Not valid for intra-European transactions
<CardFee>	7820	Disaster Relief Fund Not valid for intra-European transactions
<CardFee>	7821	MCBS Emergency Borrowing Collection. Not valid for intra-European transactions

Record Type	Code	Meaning
<CardFee>	7822	Settlement Adjustment. Not valid for intra-European transactions
<CardFee>	7823	MDS Offline Debit Settlement Not valid for intra-European transactions MDS feed via Settlement Account Management system (S.A.M.)

### 4.4.3 Visa Dispute Reason Codes

The table below lists relevant Dispute (Chargeback/reversal) reason codes received in the Visa Clearing message. Thredd maps some Visa dispute reason codes to their Mastercard equivalents. For more information on Visa Clearing message reason codes, refer to the *VisaNet Base II Message Specifications* available at <https://www.visaonline.com/>.

Record Type	Code	Meaning
Chargebacks / Reversals	10	Fraud: 10.1. EMV Liability Shift Counterfeit Fraud 10.2. EMV Liability Shift Non-Counterfeit Fraud 10.3. Other Fraud: Card-Present Environment / Condition 10.4. Other Fraud: Card-absent Environment / Condition 10.5. Visa Fraud Monitoring Program
Chargebacks / Reversals	11	Authorisation: 11.1. Card Recovery Bulletin 11.2. Declined Authorisation 11.3. No Authorisation
Chargebacks / Reversals	12	Processing errors: 12.1. Late Presentment 12.2. Incorrect Transaction Code 12.3. Incorrect Currency 12.4. Incorrect Account Number 12.5. Incorrect Amount 12.6.1. Duplicate Processing 12.6.2. Paid by Other Means 12.7. Invalid Data
Chargebacks / Reversals	13	Consumer disputes: 13.1. Merchandise / Services Not Received 13.2. Cancelled Recurring Transaction 13.3. Not as Described or Defective Merchandise / Services 13.4. Counterfeit Merchandise 13.5. Misrepresentation 13.6. Credit Not Processed 13.7. Cancelled Merchandise / Services 13.8. Original Credit Transaction Not Accepted 13.9. Non-Receipt of Cash or Load Transaction Value at ATM

**Tip:** The following website provides more details on the above Visa Dispute codes: <https://chargebacks911.com/chargeback-reason-codes/visa/>

## 4.5 Payment Token Fields

This section provides details of the fields which hold payment token information.

### 4.5.1 activationmethod

Describes the method used to activate the payment token. The table below describes the valid options and the content for each method.

PaymentToken_activationMethod	Description	Content included
0	None	Empty
1	SMS to mobile	Mobile phone number held on Thredd for the cardholder
2	Email	Email address held on Thredd for the cardholder
3	Cardholder to call automated call centre	Call centre number
4	Cardholder to call normal call centre	Call centre number
5	Website	Website URL
6	Mobile application	Mobile application reference
7	Cardholder will receive a voice call	Mobile phone number held on Thredd for the cardholder

### 4.5.2 devicetype

Describes the type of device the payment token is installed on. Below is a list of possible values.

PaymentToken_deviceType	Description
A	Clothing or apparel
B	Media or gaming device(e.g., Xbox, TV, set-top box)
C	Card
E	Mini-card. A physical card of reduced dimensions (height and width) which is smaller than the standard ID-1 card size (See ISO 7810 for the ID-1 standard.)
D	Domestic application (e.g., fridge, washing machine)
F	Fob or key fob
G	Mobile tag, case or sleeve
H	Fashion accessory (e.g., handbag, glasses)
J	Jewelry (e.g., necklace, rings, bracelets). For Visa Contactless devices, this implies any wrist-worn device (including watches and wristbands.)
M	Mobile phone

PaymentToken_deviceType	Description
N	Non-Card. This originates from Visa Contactless devices, where it indicates anything except: Card (C), Mini-Card (E), Mobile Phone (M) or Wrist-worn device (J).
P	Personal computer or laptop
R	Wristband
S	Sticker
T	Tablet
U	Unknown
V	Vehicle
W	Watch
X	Mobile phone or tablet
other	Ask Thredd for any additional values

### 4.5.3 type

Describes the type of payment token. Below is a list of possible values.

PaymentToken_type	Description
BW	Browser accessible Wallet
C	Contactless device PAN
CF	Card on File PAN
CL	Cloud-based payments PAN
P	Real PAN
SE	Secure Element PAN
U	Unknown (other PAN mapping not otherwise defined)
V	Virtual PAN

### 4.5.4 creatorstatus

Describes the status of the payment token on the token creator's system. Below is a list of possible values.

**Note:** Threddreceive this value from the token creator's system.

PaymentToken_creatorStatus	Description	Is this status reversible?
A	Active	Yes
D	Deleted on cardholder device	No
I	Inactive	Yes
N	Not tokenised	Yes
S	Suspended	Yes
X	Deactivated	No

## 4.5.5 wallet

Describes the type of eWallet the payment token belongs to. Below is a list of possible values.

PaymentToken_wallet	Description
ADYEN	Adyen (Gateway TSP)
AMAZON	Amazon
ANDROID	Google Pay Wallet (known before 20/2/2018 as "Android Pay Wallet")
APPLE	Apple Pay Wallet
ASIA	Asia Pay
CHUNGHWA	Chungwa
FITBIT	Fitbit Pay Wallet
GARMIN	Garmin Pay
LGPAY	LG Electronics
MASTERPASS	MasterPass from Mastercard
MICROSOFT	Microsoft
MRCHTOKEN	Merchant Tokenisation Program
MTBLANC	Montblanc Pay
PAYNETPHYR	Phyre
RELIANCE	Reliance
SAMA	Saudi Arabia Monetary Authority
SAMSUNG	Samsung Pay Wallet
SECURECO	SecureCo

PaymentToken_wallet	Description
STOCARD	Stocard Pay Wallet
VISA_DCA	Visa Digital Commerce App
VISACKOUT	Visa Checkout
WORLDPAY	WorldPay
other	Ask Thredd for any additional wallets

## 4.6 Processing Codes

The Processing code ([ProcCode](#)) is a 6 digit field made up of:

- 2 characters transaction code. See [Transaction Codes](#).
- 2 characters source account type code. See [Account Type Codes](#).
- 2 characters destination account type code. See [Account Type Codes](#).

For transactions initiated via web services or the Cards API, the processing code is formed of:

- 3 digits load source supplied in the request
- 3 digits "999"

### 4.6.1 Transaction Codes

The first two characters of the processing code is the transaction code as follows:

Value	Description	Impacts Balance
00	Debits (goods and services)	Yes
01	Debits (for ATM withdrawals, or for cash disbursements using Maestro cards)	Yes
02	Adjustment Credits	Yes
09	Debits (goods with cash back)	Yes
10	Account Funding	Yes
11	Quasi-Cash (e.g., gambling chips, money order, wire-transfer)	Yes
12	Debits (for cash advances)	Yes
17	Debits (for cash advances)	Yes
18	Unique Transaction (requires unique MCC)	Yes
19	Debit Adjustments	Yes
20	Credits (for refund)	Yes
21	Credits (for deposit)	Yes
22	Credits (Card Load)	Yes
23	Debits (Card Unload_	Yes
26	Original Credits	Yes
28	Credits (for payment transaction)	Yes
30	Balance inquiry service	No
32	Visa Tokenisation (Tokenisation Eligibility). Only used by Visa.	No
33	MDES / Visa Tokenisation (Tokenisation Authorisation)	No

Value	Description	Impacts Balance
34	MDES/ Visa Tokenisation (Activation Code Notification)	No
35	MDES / Visa Tokenisation (Tokenisation Complete Notification)	No
36	MDES / Visa Tokenisation (Token Event Notification. See the 'Message_Source' field for which system originated the Token Event. See the 'Message_Why' field for the Token Event that occurred.	No
37	Visa Tokenisation. Get Supported Cardholder Authentication Methods (for Approve with Authentication). Only used by Visa.	No
38	Visa Tokenisation (Device Binding). Only used by Visa.	No
39	Indicates an Account Verification transaction.	No
70	PIN change	No
71	Card Data File Action (eg new PAN or expdate)	No
72	PIN unblock	No
91	PIN unblock	No
92	PIN change	No

## 4.6.2 Account Type Codes

The 3<sup>rd</sup> & 4<sup>th</sup> digits in Processing code is the Source account type code.

The 5<sup>th</sup> and 6<sup>th</sup> digits in Processing code is the Destination account type code.

Both codes are from the following list of account type codes (based on ISO 8583:2003 Account Type Codes).

Value	Description
00	Default Account (not specified or not applicable)
10	Savings Account
20	Cheque Account
30	Credit Card Account
38	Credit Line Account
39	Corporate Account
40	Universal Account
50	Money Market Investment Account
58	IRA Investment Account
60	Stored Value Account

Value	Description
90	Revolving Loan Account
91	Instalment Loan Account
92	Real Estate Loan Account

## 0.1 Discover Processing Codes

**Note:** Only applicable to Discover.

Refer to the table below for details of supported Discover Network processing codes and how these map to Thredd processing codes.

Field Position	Discover Value	Thredd Value	Description	Supported	Notes
Processing Codes (Positions 1 and 2)	00	00	Goods and Services	√	
	01	01	Cash	√	
	18	39	Card Account Verification Request	√	
	20	20	Merchandise Return	√	Thredd use the wording Refund
	22		Adjustment	x	Not in scope for phase 1
	2A		Account Credit Transaction	x	Not in scope for phase 1
	31	30	Balance Inquiry	x	Not in scope for phase 1. This is for physical cards/ ATM
	98	98	PIN Change	x	Not in scope for phase 1
	99	99	PIN Unblock	x	Not in scope for phase 1
"From" Account Types (Positions 3 and 4)	00	00	Default–unspecified	√	Other types will not be received
	30	30	Credit Facility	√	Thredd call this credit account
"To" Account Types (Positions 5 and 6)	00	00	Default–unspecified	√	Other types will not be received

Field Position	Discover Value	Thredd Value	Description	Supported	Notes
	30	30	Credit Facility	√	Thredd call this credit account

## 4.7 Load Sources

Refer to the table below for a list of load sources available for the <LoadSource> field.

Source	Description
1	POS standard
2	Thredd Kiosk
3	Thredd Web Site
4	Card Processor
5	Standard Web Service
6	Agent
7	Head Office
8	Call Centre
9	Customer Website
10	Wirecard (no longer used)
11	Customer kiosk
12	Customer mobile app
13	Thredd IVR
14	Unknown
16	Load From Card Request File
17	Corporate
18	epay
19	HOCA Verifiable
20	Post Office
21	HOCA Non Verifiable
22	Paypoint
23	DXB POS Reload
24	TCC Web Report
25	TCC Online
26	VIRGIN POS Reload
27	TCC POS Reload

Source	Description
28	TCC Promotion
29	DXB Zero Load
30	AlFardan Reload
31	UAEx Reload
32	AlAnsari Reload
33	14 day Cool Off
34	Unload to Repatriate
35	Loan Repayment
36	DXB Online
37	Payzone
38	VIRGIN Zero Load
39	VIRGIN POS standard
40	JADE Web Report
41	JADE POS standard
42	JADE POS Reload
43	JADE Zero Load
44	Wirecard-Cadooz
45	Crunch POS Standard
46	CRUNCH POS Reload
47	Unload Fee Test
48	Balance Transfer Fee Test
49	Sofort Banking
50	Wirecard e-commerce
51	UAExAirport POS Standard
52	UAExAirport Reload
53	Cadooz Load
54	Cadooz Reload
55	Cadooz web unload

Source	Description
56	Sofort Bank Transfer Load
57	Billpay Payment
60	Post Office and Paypoint
61	Credit Limit
62	Credit Card Payment
63	Ukash Payment
64	Bank Transfer
65	Giropay
66	Sofortüberweisung
67	Debit Card
68	Primary Card
74	Master Virtual Card
75	Micropayment
76	MVC Load
77	iMVC Load
78	P2P Transfer
79	Auto-transfer from Primary Card
91	Incoming SEPA Transfers
92	Incoming Direct Debit
93	Outgoing Sepa Transfers
94	Outgoing Direct Debit
95	Voucher
96	Cash Incentive Rewards
97	Entercash
98	Payvision
101	La Banque Postale
102	Loyalty Programme
103	KYC Upgrade_Grp Chng

Source	Description
106	First Load from MVC
107	Cash Deposit
108	International Bank Transfer
109	Balance Transfer - Mtel
110	Balance Transfer - Phyre
111	Balance Transfer - CashTerminal
112	Balance Transfer - Payoo

## 4.8 Non-Clearing Report Example

Below is an example of a Non-Clearing Report. For a description of the XML schema, see Non-Clearing Report XML Schema

## 4.10.1 Schema Changes

Refer to the schema changes below.

Version	Description
V1.57	Added the <i>Traceid_Lifecycle</i> and the <i>VATAmt</i> elements.
V1.56	Included the <i>AcquiringCountry</i> element.
V1.55	Added <code>&lt;xs: enumeration value= " " /&gt;</code> for the <i>cardholderpresent</i> , <i>cardpresent</i> , and <i>cardinputmethod</i> attributes, ensuring support for null values. Added <i>use="required"</i> to the <i>maskedPAN</i> attribute. This ensures that the maskedPAN is mandatory.
V1.54	Removed list of ISO Currency and ISO Country codes.
V1.53	Added <i>MaskedPAN</i> element.
V1.52	Added currency codes 531, 534
V1.51	<i>BankingFeeld</i> changed to <i>unsignedLong</i> <i>LoadUnloadId</i> changed to <i>unsignedLong</i> Removed <i>VoidedAdjustId</i> as no longer in use Removed <i>MessageId</i> as no longer in use Removed <i>VoidedLoadUnloadId</i> as no longer in use
V1.48	Added <i>MVC</i> token indicator to the <i>Card</i> sub-element. Updated minimum length requirement of PAN in <i>&lt;Card&gt;</i> to 14 digits. Added new ISO currency code: 924. Added a new attribute called <i>TTI</i> (Transaction Type Identifier) to the <i>Txn</i> element.
V1.47	Changed <i>Trace/auditno</i> attribute from required to optional. Added a new currency code value of 157 (CNH) to the <i>ISOCurrencyCode</i> type.
V1.46.1	Changed the data type of <i>PresentmentID</i> from <i>unsigned Int</i> to <i>unsigned Long</i> .
V1.46	Updated the maximum length of the <i>DE94_Txn_Orig_ID</i> field to 16.
V1.45	Changed <i>CardChrgBackRepRes BillAmt</i> and <i>SettlementAmt Rate</i> to support 9 decimal places. Added CHAPS to <i>Cashtype</i> Added Currency Code 925 ( <i>SLE</i> ) In the <i>CardAuthorisation</i> record, the <i>Aprcode</i> element has been updated to <i>nillable="true"</i> Removed element: <i>FXConversion</i>
V1.43.1	Change type of <i>AuthTxnID</i> in XSD from <i>unsignedint</i> to <i>unsignedlong</i> Change <i>nillable</i> to <i>true</i> for type <i>Desc</i> in <i>ApprovedAgencyBanking</i> , <i>DeclinedAgencyBanking</i> , <i>AgencyBankingFee</i> Added new element : <i>WalletTransaction</i> Removed digit restriction for the <i>sortcode</i> and <i>accountno</i> attributes of the <i>AgencyBanking</i> elements, to allow alphanumeric characters of 6 and 8 lengths respectively.  A new record type called <i>VFC</i> (Visa Fee Collection) has been added to the <i>MasterCardFee</i> element. The maximum length of the <i>DE94_Txn_Orig_ID</i> data element has been updated to 16.
V1.43	Added new attribute in the <i>CardEvent/Event</i> element - <i>transactionid</i>

Version	Description
V1.42	Added new element <i>LocalDateUTC</i> to <i>CardAuthorisation</i> and <i>CardFinancial</i>
V1.41	Added new element: <i>PaymentToken</i> to <i>CardAuthorisation</i> and <i>CardFinancial</i> primary elements. Updated list of ISO currency codes.
V1.40	Changed <i>CardFinancial/BillAmt@Rate</i> and <i>CardFinancial/SettlementAmt/@Rate</i> to support 9 decimal places ( by adding <i>ConversionSettlementAmt.</i> ) Note: This is an update to the XSD only. Live code already supports 9 dp.
V1.39	Added new element : <i>FXConversion</i> n <i>CardAuthorisation</i> and <i>CardFinancial</i> primary elements.
V1.38	Added new elements : Sender and Reciever.
V1.37	Added new element - <i>RecordType</i> . Increased length of affected <i>MastercardFee</i> elements
V1.43.1	Changed the type of <i>AuthTxnID</i> from <i>unsignedint</i> to <i>unsignedlong</i> . Added the two-digit country code SS (South Sudan) to the <i>ISOCountryCode</i> list. For some elements, the <i>Desc</i> element is set to <i>nillable="true"</i> .
V1.43	Added a new <i>transactionid</i> attribute to the <i>CardEvent / Event</i> element. Updated <i>MaxLength</i> of <i>DE94_Txn_Orig_ID</i> Element to 13 to match <i>MaxLength</i> in <i>VisaCollection</i> table.
V1.42	Added a new element: <i>LocalDateUTC</i> to <i>CardAuthorisation</i> and <i>CardFinancial</i> primary elements.
V1.39	Added new element : <i>FXConv</i> to <i>CardAuthorisation</i> and <i>CardFinancial</i> primary elements.
V1.36	Added new element - <i>BSA</i> . Updated <i>cardauth</i> method and <i>cardauthentity</i>
V1.35	<i>ProductID</i> can be 5 digits long
V1.34	Removed <i>IssuerReferenceNumber</i> element. Added <i>ChargebackRefNum</i> element
V1.33.1	Banking File element not mandatory
V1.33	Added <i>IssuerReferenceNumber</i> element
V1.32	Added <i>value2</i> attribute
V1.31	Added one more <i>ISOCurrencyCode</i> - 929. Added two new <i>ABDeclineReason</i> - 00, 9. <i>AbId</i> changed from <i>Int</i> to <i>Long</i> . Removed <i>ProductID</i> from <i>MastercardFee</i>
V1.30	Added <i>Additional_Amt_DE54</i> in <i>Financial</i> and <i>Chargebacks</i> . Multiple patterns in a <i>Restriction</i> was found not to validate when checking online XML validators. Substituted with <i>\s*</i> in regular expression.
V1.29	Included <i>ProductID</i> in <i>MastercardFee</i> . Increased length of <i>Additional_Data_048</i> in <i>MastercardFee</i> . <i>Settlementdate</i> can be blank in <i>Mastercardfee</i> . <i>Recon Date</i> can be blank in <i>Mastercardfee</i> . <i>Settlement Date</i> can be blank in <i>Mastercardfee</i>

Version	Description
V1.28	Corrected <i>SettlementIndicator</i> in Fin and Chargeback. Corrected <i>MerchCode</i> in Auth and Chargeback. Added <i>recon</i> in <i>Cardfee</i> . Added <i>CardChrgBackRepRes</i> Account type 02. Added Currency 928. Added <i>Nullable AuthID</i> in <i>CardFinancial</i> . Made <i>CardChrgBackRepRes FIID</i> and <i>RIID</i> optional. Changed sequence location of <i>CardChrgBackRepResSettlementIndicator</i> . Corrected <i>CardBalAdjust AdjustId</i> sequence and removed <i>Rectype</i> .
V1.27	Added <i>SettlementCycle</i> , <i>ReconciliationDate</i> , <i>ReconciliationCycle</i> , <i>Usage</i> and <i>Pending_Billing_Amount</i> .
V1.25	Added <i>SettlementIndicator</i> .
V1.24	Updated <i>CardFinancialAuthId</i>
V1.23	Updated <i>cardholderpresent</i> and <i>cardpresent</i>
V1.22	Updated <i>inputcapability</i> , <i>authcapability</i> , <i>cardholderpresent</i> , <i>cardpresent</i> , <i>cardinputmethod</i> , <i>cardauthmethod</i> and <i>cardauthenticity</i> .
V1.18	Removed <i>Programid</i> attribute. Changed <i>MarchCode</i> to 30 characters length. Changed <i>Desc</i> to 500 characters length
V1.11	Removed reference to <i>ResponseFinancial</i> element

# 1 Clearing Report XML Schema

The following is the clearing report XML schema.

```
<?xml version="1.0" encoding="utf-8"?>

## 4.11.1 Schema Changes

Refer to the schema changes below.

Version	Description
V.1.18	Included the <i>Traceid_Lifecycle</i> and <i>VATAmt</i> subelements.
V1.17	Included the <i>AcquiringCountry</i> element.
V1.16	<i>DE94_Txn_Orig_ID</i> now has a maximum character length of 16.
V1.15	Added <code>&lt;xs: enumeration value= "" /&gt;</code> for the <i>cardholderpresent</i> , <i>cardpresent</i> , and <i>cardinputmethod</i> attributes, ensuring support for null values. Added <code>use="required"</code> to the <i>maskedPAN</i> attribute. This ensures that the maskedPAN is mandatory.
V1.14	Removed <i>ISOCurrencyCode</i> and <i>ISOCountryCode</i> elements, so that list of currencies and countries no longer exist in the schema.
V1.13	Added <i>MaskedPAN</i> element.
V1.12	Added currency codes 531 and 534.
V1.11	Changed <i>LoadUnloadId</i> changed to <i>unsignedLong</i> Changed <i>MastercardFeeld</i> changed to <i>unsignedLong</i>
V 1.10	<i>MVC</i> token indicator added to the <i>Card</i> sub-element. Updated minimum length requirement of PAN in <code>&lt;Card&gt;</code> to 14 digits. Added new ISO currency code: 924. Added a new attribute called <i>TTI</i> (Transaction Type Identifier) to the <i>Txn</i> element.
V 1.00	Initial version.

## Section 5: FAQs

---

# General FAQs

This section provides answers to frequently asked questions.

## Types of Reports

### What type of reports does Thredd provide?

Thredd provides the following reports to Program Managers:

- Clearing Report (transaction data)
- Non-Clearing Report (transaction data)
- UTC Balance reports

**Note:**

For Issuers and Self-Issuers, Thredd provides two additional reports:

- Fee Collection Report
- Quarterly Management Report (QMR)

For details, please contact your implementation manager or account manager.

### When does Thredd send the reports?

As part of the Global Transaction Reporting capability, Thredd can send the reports at the local time you require.

### Can I configure the details provided in each report?

No, you cannot configure the Thredd reports. If you require bespoke reports, please speak to your Account Manager.

## Delivery of Reports

### How often are reports provided? Can I change this?

Thredd provides the Non-Clearing Report once a day. You can configure the sending of the Clearing Report, where Thredd can send a report up to 6 times a day, following each clearing file Thredd receives from the card schemes.

### How are reports provided to customers?

Thredd provide daily reports to customers via sFTP. This is on a push only basis.

### How often do you change the fields in the report?

Thredd adds new fields to the report in line with updates from the card schemes (Visa and Mastercard), or to reflect other changes relevant to the payments industry or Thredd's service.

When making changes to the reports, Thredd updates the technical documentation and notifies you of the change.

### What report file formats are available?

Thredd currently supports XML and Comma Separated Variable (CSV) formats.

### Are reports encrypted?

Yes. Thredd encrypts reports using the PGP standard.

### How do I identify the version of the report?

The XML schema version is listed in the comments section of the schema, together with details of what has changed.

### How large is a typical report?

The size is based on the number of your transactions and can be anything from 1KB to 2GB. Thredd splits up anything larger than 2GB into smaller files, for example,, *filename.001*, *filenename.002* and *filename.003*.

## Do you store reports and if so, for how long?

Thredd stores reports for up to 2 calendar days on the sFTP server, after which they are deleted from the server. Thredd archives the historical files for a limited period. For access to historical files, please raise a JIRA request.

## Using the Reports

### How can I use the reports?

You can use reports to do the following:

- Update your transactions database.
- Manage the transaction reconciliation.

# Glossary

This page provides a list of glossary terms used in this guide.

## A

---

### Account Verification

A type of authorisation transaction which is intended to confirm that the account is genuine and active. Account Verifications are always for a zero amount, so only appear in Authorisation messages and never in clearing messages.

### Acquirer

The merchant acquirer or bank that offers the merchant a trading account, to enable the merchant to take payments in store or online from cardholders.

### Authentication

This includes checks to confirm the cardholder identity, such as PIN, CVV2 and CAVV.

### Authorisation

Stage where a merchant requests approval for a card payment by sending a request to the card issuer to check that the card is valid, and that the requested authorisation amount is available on the card. At this stage the funds are not deducted from the card.

## C

---

### Card Scheme

Card network, such as MasterCard or Visa, responsible for managing transactions over the network and for arbitration of any disputes.

### Chargeback

Where a cardholder disputes a transaction on their account and is unable to resolve directly with the merchant, they can raise a chargeback with their card issuer. The chargeback must be for a legitimate reason, such as goods and services not received, faulty goods, or a fraudulent transaction.

### Clearing File/Clearing Transaction

Thredd receive batch clearing files from the card networks, containing clearing transactions, such as presentments and network fees. The card issuer transfers the requested settlement amount to the acquirer and 'clears' the amount on the card, reducing the available card balance accordingly.

## E

---

### External Host Interface (EHI)

The External Host Interface provides a facility to enable exchange of data between Thredd and external systems via our web services. All transaction data processed by Thredd is transferred to the External Host side via EHI in real time. For certain types of transactions, such as Authorisations, the External Host can participate in payment transaction authorisation.

## I

---

### ICA

The Interbank Card Association Number (ICA) is a five-digit number assigned by MasterCard to a financial institution, third-party processor or other member to identify the member in the transaction.

### Issuer

The card issuer, typically a financial organisation authorised to issue cards. The issuer has a direct relationship with the relevant card scheme.

## M

---

### Mastercard clearing cycle

Mastercard provides 6-8 clearing updates during each day, with details of financial transactions that are due for settlement.

### Merchant

The shop or store providing a product or service that the cardholder is purchasing. A merchant must have a merchant account, provided by their acquirer, in order to trade. Physical stores use a terminal or card reader to request authorisation for transactions.

Online sites provide an online shopping basket and use a payment service provider to process their payments.

#### Merchant Category Code (MCC)

A unique identifier of the merchant, to identify the type of account provided to them by their acquirer.

#### MNE (Mastercard Networks Exchange)

A US PIN debit network provider for opening access to US debit networks.

## P

---

#### PGP

Pretty Good Privacy (PGP) is an encryption system used for both sending encrypted emails and encrypting sensitive files.

#### Presentments

Stage in a transaction where the funds authorised on a card are captured (deducted from the cardholder's account). Also known as Clearing.

#### Programme Manager

A Thredd customer who manages a card programme. The programme manager can create branded cards, load funds and provide other card or banking services to their end customers.

## R

---

#### reconciliation cycle

Thredd receive six cycles of settlement data from Mastercard.

#### reconciliation date

The system processing date associated with the settlement of funds, as provided by Mastercard.

## S

---

#### SAFE Reporting

You can report fraudulent transactions to Mastercard by creating a new fraud event in Mastercom, using their SAFE reporting facility (now referred to as the Mastercard Fraud and Loss Database).

#### sFTP

Secure File Transfer Protocol. File Transfer Protocol (FTP) is a popular unencrypted method of transferring files between two remote systems. SFTP (SSH File Transfer Protocol, or Secure File Transfer Protocol) is a separate protocol packaged with SSH that works in a similar way but over a secure connection.

#### Smart Client

Smart Client is Thredd's user interface for managing your account on the Thredd Platform. Smart Client is installed as a desktop application and requires a secure connection to Thredd systems in order to be able to access your account.

#### SSL Certification

An SSL certificate displays important information for verifying the owner of a website and encrypting web traffic with SSL/TLS, including the public key, the issuer of the certificate, and the associated subdomains.

## T

---

#### Thredd Portal

Thredd Portal is Thredd's new web application for managing your cards and transactions on the Thredd Platform

## U

---

#### UTC

Coordinated Universal Time or UTC is the primary time standard by which the world regulates clocks and time.

# Document History

This section provides details of what has changed since the previous document release.

Version	Date	Reason	Revised by
1.6	11/03/2026	Added <a href="#">VATAmt</a> description and examples to <a href="#">CardFees</a> , <a href="#">CardFinancial</a> , <a href="#">CardOnlineFinancial</a> . Included <a href="#">Traceid_Lifecycle</a> description in <a href="#">CardFinancial</a> , <a href="#">CardChrgBackRepRes</a> , <a href="#">CardOnlineFinancial</a> , and <a href="#">CardAuthorisation</a> . Added description to <a href="#">Sub-Elements and Attributes</a> . Included new CLR and NCLR schemas (see <a href="#">Non-Clearing Report XML Schema</a> and <a href="#">Clearing Report XML Schema</a> ).	KD
	06/11/2025	The following attributes under the <a href="#">TXN</a> element are now optional: <a href="#">cardholderpresent</a> , <a href="#">cardpresent</a> , <a href="#">cardinputmethod</a> , <a href="#">cardauthmethod</a> , and <a href="#">cardauthentity</a> . These attributes under the <a href="#">Term</a> element are also now optional: <a href="#">inputcapability</a> and <a href="#">authcapability</a> . See <a href="#">Sub-Elements and Attributes</a> .	KD
	03/11/2025	Included <a href="#">AcquirerCountry</a> description and examples to <a href="#">CardAuthorisation</a> , <a href="#">CardFinancial</a> , and <a href="#">CardOnlineFinancial</a> . Added description to <a href="#">Sub-Elements and Attributes</a> . Included new CLR and NCLR schemas (see <a href="#">Non-Clearing Report XML Schema</a> and <a href="#">Clearing Report XML Schema</a> ).	KD
1.5	24/09/2025	Clarified descriptions of <a href="#">LocalDate</a> to specify that it is the date and time within the local timezone. See <a href="#">Sub-elements and Attributes</a> as an example.	KD
	15/09/2025	Updated CLR schema where <a href="#">DE94_Txn_Orig_ID</a> now supports a maximum of 16 characters. See <a href="#">Clearing Report XML Schema</a> .	KD
	30/07/2025	Added new NCLR and CLR schemas where <a href="#">maskedPAN</a> is now required. Specified <a href="#">maskedPAN</a> as required in the <a href="#">Card</a> element. See <a href="#">Non-Clearing Report XML Schema</a> and <a href="#">Clearing Report XML Schema</a> and <a href="#">Sub-Elements and Attributes</a> .	KD
	28/07/2025	Added new NCLR and CLR schemas where the <a href="#">cardholderpresent</a> , <a href="#">cardpresent</a> , and <a href="#">cardinput</a> attributes include empty fields to support null values. Updated descriptions for the <a href="#">TXN</a> element where these attributes exist. See <a href="#">Non-Clearing Report XML Schema</a> and <a href="#">Clearing Report XML Schema</a> and <a href="#">Sub-Elements and Attributes</a> .	KD
	12/06/2025	Added NCLR and CLR schemas where country and currency codes are removed (see <a href="#">Non-Clearing Report XML Schema</a> and <a href="#">Clearing Report XML Schema</a> ). Removed country and currency codes reference sections.	JB
	01/05/2025	Added the <a href="#">MaskedPAN</a> to the <a href="#">Card</a> sub-element. Changed the NCLR and CLR schemas, and included new examples. See <a href="#">PRN-222</a>	KD
	30/04/2025	Updated the description of the <a href="#">SchemeSettlementDate</a> element. See <a href="#">Sub-elements and Attributes</a> .	WS
	10/04/2025	Added currency code for the Caribbean Guilder currency (XCG) for Curacao and Sint Maartens that replaces Netherlands Antillean guilder (see <a href="#">ISO Currency Codes</a> ). Added Curacao and Sint Maartens to the currency list for this new currency.	KD
	06/03/2025	Added references to the Discover network. Also included new elements and sub-elements that are used in the Discover network. Indicated elements that are not applicable to the Discover network.	KD
	13/02/2025	Added references to Thredd Portal, our new online portal for managing your cards and transactions.	KD

Version	Date	Reason	Revised by
	06/02/2025	For the <b>Non-Clearing Report</b> and <b>Clearing Report</b> schema child elements, amended data types and removed child elements that are no longer in use. Amended and removed child elements in various records.	KD
	28/01/2025	Updated the description of <b>LocalDateUTC</b> in <b>CardAuthorisation</b> and the <b>CardFinancial</b> to indicate that it is the time and date of the matching authorisation. Added <b>LocalDateUTC</b> with examples to <b>Sub-Elements and Attributes</b> .	KD
	09/01/2025	Added descriptions on the REG suffix used in filenames of regenerated reports. See <b>File Naming Convention</b>	KD
	13/12/2024	Updated FIID Element to indicate that it is not required. See <b>CardChrdBackRepRes</b>	KD
	11/12/2024	Updated the maximum length of the <b>location</b> field in the <b>Term</b> element to 128 characters. See <b>Sub-elements and Attributes: Term</b> .	WS
	21/11/2024	Updated minimum length of the <b>PAN</b> to be 14 characters. Added ISO currency code 924. Included new CLR and NCLR schemas. See <b>PRN 196</b> and <b>PRN 197</b> .	KD
	04/11/2024	Updated the description of the <b>Desc</b> field maximum value to 500 characters. See <b>Sub-elements and Attributes: Desc</b> .	WS
	10/10/2024	Added the MVC token indicator to the <b>Card</b> sub-element, and included a new schema file, and updated examples. See <b>PRN-192</b>	KD
1.4	26/09/2024	Added descriptions of the <b>Auth_type</b> sub-element, and included a new schema file, and updated examples. See: <b>PRN-185</b>	KD
1.3	19/09/2024	Corrections to schema.	KD
	05/09/2024	New guide version available in HTML.	KD
1.2	23/07/2024	In the <b>CardChrgBackRepRes</b> element, clarified that <b>FIID</b> , <b>RIID</b> , and <b>ChargebackRefNum</b> are populated only for Mastercard chargebacks.	KD WS
	02/07/2024	Updated the <b>company address</b> .	PC
1.1	19/06/2024	Added descriptions of the different types of chargeback records that can be provided in the <b>CardChrgBackRepRes</b> element.	WS
	30/05/2024	Added naming of Global Transaction Reporting.	KD
1.0	21/05/2024	Improved descriptions and standardised naming conventions in <b>File Sending Schedule</b> .	KD
	01/03/2024	Added content for new Clearing Reports and Non-Clearing Reports. Added <b>CardOnlineFinancial</b> element.	KD
	07/06/2023	Updated Operations email address to be <a href="mailto:occ@thredd.com">occ@thredd.com</a>	MW
	27/04/2023	Guide rebrand to new company name and brand identity.	WS
	01/04/2023	First draft.	WS
